For example, if $\alpha = 1$ and $\beta = 0$, then $\hat{\alpha} = 1$ and $\hat{\beta} = 0$ for all n . In the same way, if $\alpha = 0$ and $\beta = 1$, then $\hat{\alpha} = 0$ and $\hat{\beta} = 1$ for all n . In the case $\alpha = 0$ and $\beta = 0$, the limit of $\hat{\alpha}$ and $\hat{\beta}$ depends on the value of α and β in the original population. For example, if $\alpha = 0$ and $\beta = 1$, then $\hat{\alpha} = 0$ and $\hat{\beta} = 1$ for all n . In the case $\alpha = 0$ and $\beta = 0$, the limit of $\hat{\alpha}$ and $\hat{\beta}$ depends on the value of α and β in the original population.
