What you need:

Wax guard replacement tools

Hearing aids

Dome kit
(optional)

Step 1:

Open the case and
remove one of the tools.

Step 2:

Identify the two ends of
the tool.

Step 3:

On one of the hearing aids, firmly pull the dome off of the receiver. The white part under it is the old wax guard.

Step 4:

Press the pointed end of the tool into the old wax guard, then pull out to remove.

Note: To prevent damage, don't insert anything into the open receiver underneath.

Step 5:

Step 6:

Fully insert the new wax guard so that it's flush with the top of the receiver, then pull the tool straight out.

Step 7:

Check that the wax guard is flush with the top of the receiver and not poking out.

Note: This helps prevent the wax guard from falling off in your ear canal.

Step 8:

Get a dome to put on the receiver. Either choose your size from a dome kit (available separately) or reuse the old dome.

Step 9:

Align the opening of the dome with the receiver and slide the dome onto the receiver.

Step 10:

Gently tug the dome to make sure it's securely fastened.

Note: This helps prevent the dome from falling off in your ear canal.

Step 11:

Repeat steps 1 – 10 for the other hearing aid. When you're done, throw away the used tools and wax guards.
