

# How to determine your ring size

The most accurate way to find your ring size is go to a local jewelry store. If you are unable to visit a store, use this guide to determine your ring size. Alternatively, you can order a plastic ring sizer to use at home here. If you need any help using this guide, please contact me at <a href="mailto:sales@hebeldesign.com">sales@hebeldesign.com</a>

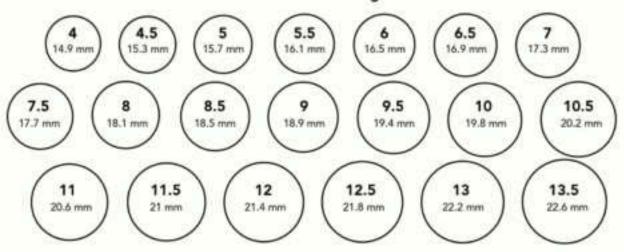

# Method 1: Using an existing ring

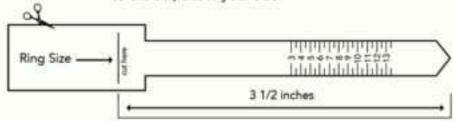

- 1. Pick a ring that fits the correct finger well.
- Place the ring over the circles below and match the inside edge of the ring to the circle closest in size.
- 3. If the ring is between two sizes, order the larger size.

### **US and Canadian Ring Sizes**

# Method 2: Using paper wrap

Cut out the ring sizer and cut a slit on the vertical line. Wrap the ruler around the base of the intended finger. Pull the pointed end through the slit until the paper fits comfortably around your finger. Read the number that lines up next to the slit, this is your size.

Alternatively, you can wrap a piece of string (or a strip of paper) around your finger and mark where the two pieces of string meet. Measure the length between the two marks in mm, this is the inside circumference. Match this number to the nearest circumference on the chart (see pg 2) to estimate your ring size. (If between sizes, pick the larger one).

#### International Ring Size Chart
