Product Overview

The Smart Motion Sensor R1 is designed to detect the movement of objects with high sensitivity and accuracy. It can be seamlessly integrated with platforms such as Amazon Alexa, SmartThings, Hubitat, Home Assistant, and the Third Reality via the Zigbee protocol. This enables the creation of personalized routines triggered by motion detection, such as turning on lights or sending security notifications. Additionally, the sensor features an adjustable sensitivity setting to tailor its performance to your specific needs.

Button functions

	Function	**Procedure**
Reset (+)	Reset Indication	Press and hold for 10 seconds
	Enhance sensitivity	Click once
LED (-)	En/Disable motion detect light	Press and hold for 3 seconds
	Decrease sensitivity	Click once

LED Status

Operation	**Description**
Factory Reset	The LED is illuminated.
Pairing	The LED flashes rapidly .
Motion detected	When the device is triggered, the indicator light for the current sensitivity level will illuminate for 1 second.
Offline	The LED flashes once every 3 seconds.
Low Battery	The LED flashes twice every 5 seconds.

*The sensitivity indicator light will be reused with the status indicator light.

Setup

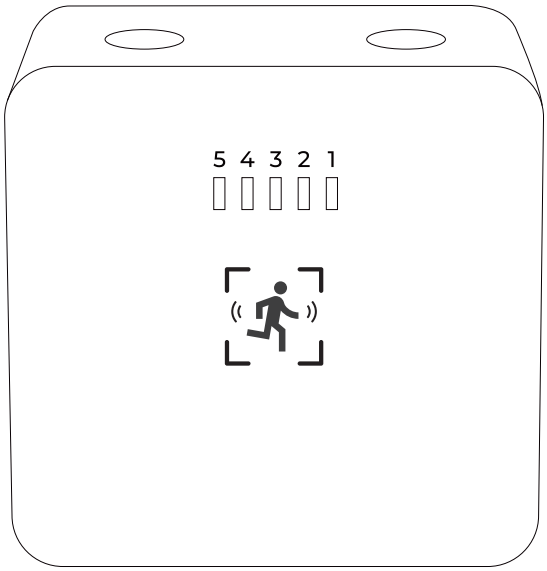
1. Open the battery cover on the device and remove the insulation strip to power the device.
2. When the device is powered on, the sensitivity indicator will flash rapidly and the device will enter the Zigbee pairing mode. If the sensor is not in the pairing mode, press and hold the + button for 10 seconds to factory reset the sensor.
3. Follow the instructions on the platform to add the device.

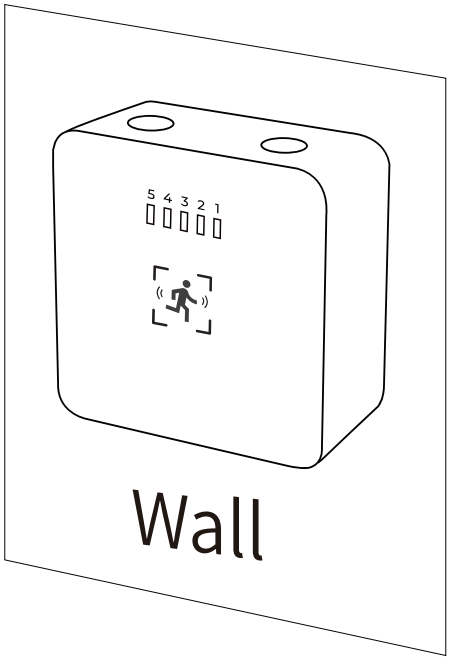
Compatible Platforms

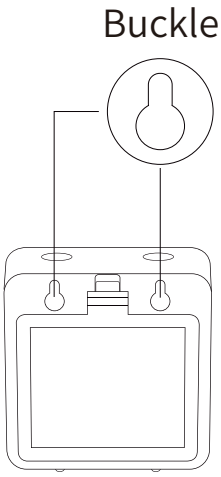
Platform	Requirement
Amazon	Echo with built-in Zigbee hub
SmartThings	2015/2018 models, Station
HomeAssitant	ZHA and Z2M with Zigbee dongle
Hubitat	With Zigbee hub
ThirdReality	Smart Hub/Bridge
Homey	Bridge/Pro
Aeotec	Aeotec Hub

Installation

The product features an anti-slip design, allowing it to be placed directly on a table or mounted on the wall using screws.







① Vertically placed on table

② Hang on the wall

Troubleshooting

Optimize Installation Location

Avoid Direct Metal Surface Installation,Place a non-metallic insulating layer (e.g., plastic or rubber pad, ⩾5mm thick) between the radar and the metal surface.

Setup with Smart Bridge MZ1

The Smart Bridge (sold separately) enables your Zigbee device to become Matter-compatible, allowing seamless integration with major Matter ecosystems like Apple Home, Google Home, Amazon Alexa, Samsung SmartThings, and Home Assistant. By setting up your motion sensor with the Smart Bridge, it transforms into a Matter compatible smart motion sensor, enabling local control through Matter. Third Reality also offers the 3R-Installer APP, which lets you configure Zigbee sensor attributes such as default-on behavior and perform firmware updates.

1. Ensure your bridge is already set up within your smart home system.
2. Open the battery cover on the device and remove the insulation strip to power the device.
3. When the device is powered on, the sensitivity indicator will flash rapidly and the device will enter the Zigbee pairing mode. If the sensor is not in the pairing mode, press and hold the + button for 10 seconds to factory reset the sensor.
4. Press the pinhole button on the bridge to activate Zigbee pairing mode. The Zigbee blue LED should start blinking.
5. The sensor will pair with the bridge, and a new device will appear in your smart home app, such as Google Home or Alexa.
6. Optionally, you can install the 3R-Installer APP and use the multi-admin feature in your smart home app to share permissions with the 3R-Installer APP.

Setup with Third Reality Hub and SKILL

The Third Reality Hub (sold separately) allows you to control your device remotely via the Third Reality APP, making it a great option for smart home beginners or those without a system from major providers. Additionally, the Third Reality Cloud supports SKILL integration with Google Home or Amazon Alexa, enabling you to connect your device to these platforms. However, due to the potential for slow and unreliable Cloud-to-Cloud connections, we recommend using the Bridge solution if Google Home or Alexa is your primary smart home platform.

1. Ensure your hub is properly set up with Third Reality App.
2. Open the battery cover on the device and remove the insulation strip to power the device.
3. When the device is powered on, the sensitivity indicator will flash rapidly and the device will enter the Zigbee pairing mode. If the sensor is not in the pairing mode, press and hold the + button for 10 seconds to factory reset the sensor.
4. Open the Third Reality APP, press the “+” icon next to the hub, and select “Quick Pair.”
5. The sensor will pair with your hub and appear in the Third Reality APP.
6. Optionally, you can enable the Third Reality SKILL in either the Alexa or Google Home app to enable Cloud-to-Cloud communication.

Setup with Compatible Third-Party Zigbee Hubs

Third Reality supports integration with various open Zigbee platforms, including Amazon Echo with built-in Zigbee, Samsung SmartThings, Home Assistant (with ZHA or Z2M), Homey and Hubitat. If you own any of these devices, you can pair the smart motion sensor directly without the need for an additional bridge or hub.

1. Ensure your Zigbee Hub is already set up within your smart home system.
2. Open the battery cover on the device and remove the insulation strip to power the device.
3. When the device is powered on, the sensitivity indicator will flash rapidly and the device will enter the Zigbee pairing mode. If the sensor is not in the pairing mode, press and hold the + button for 10 seconds to factory reset the sensor.
4. Open your smart home app and follow the on-screen instructions to begin the Zigbee pairing process.
5. The motion sensor will pair with the Zigbee hub.
6. You can now use your smart home app to create routines.

Pairing with SmartThings

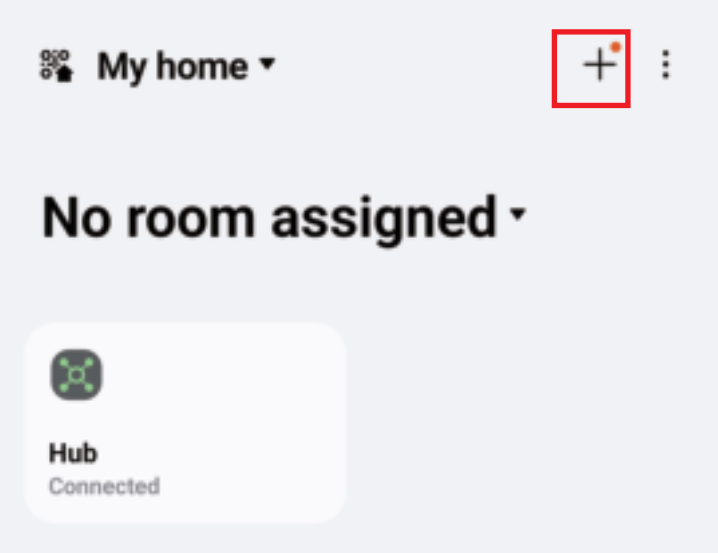
App: SmartThings App
Devices: SmartThings Hub 2nd Gen(2015) and 3rd Gen(2018), Aeotec Smart Home Hub.

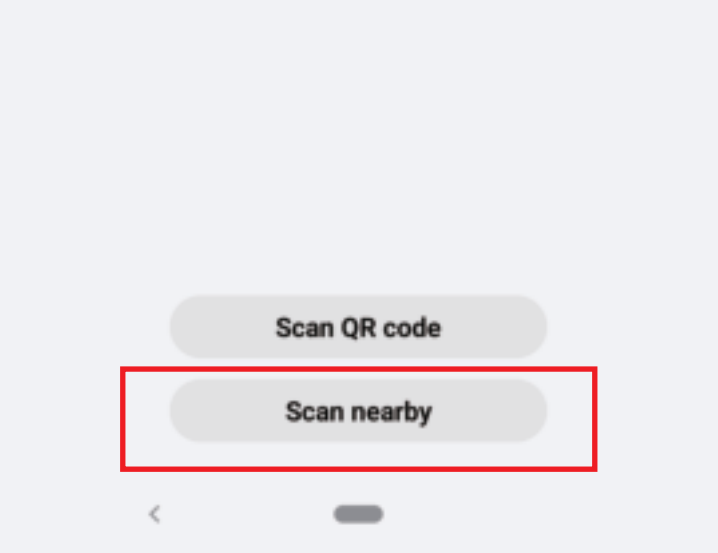
Pairing steps:

1. Before pairing, check for updates to make sure the SmartThings Hub firmware is up to date.
2. Add SmartThings drivers for ThirdReality Motion Sensor

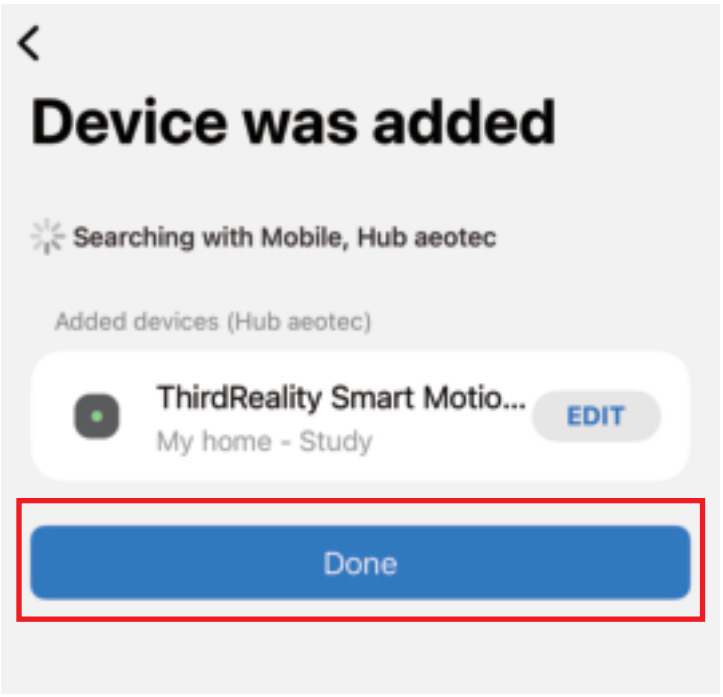
- Open this link in your PC browser. Log in your SmartThings Account.
  https://bestow-regional.api.smartthings.com/invite/adMKr50EXzj9
- Click "Enroll" --"Available Drivers" -- "Install" to install the device driver.

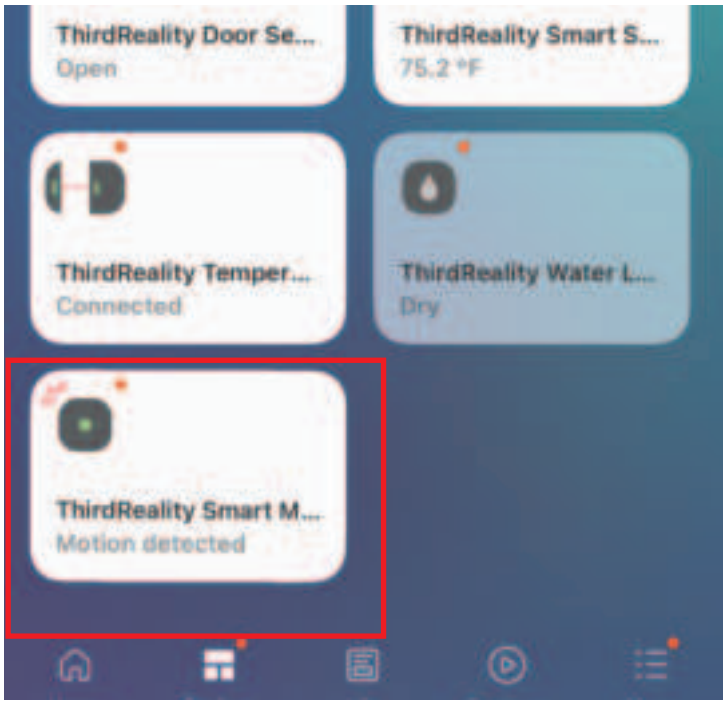
3. Open the battery cover on the device and remove the insulation strip to power the device.
4. When the device is powered on, the sensitivity indicator will flash rapidly and the device will enter the Zigbee pairing mode. If the sensor is not in the pairing mode, press and hold the + button for 10 seconds to factory reset the sensor.
5. Open your SmartThings App, tap “+” on the up right corner to ”Add device” and then tap “Scan nearby”.



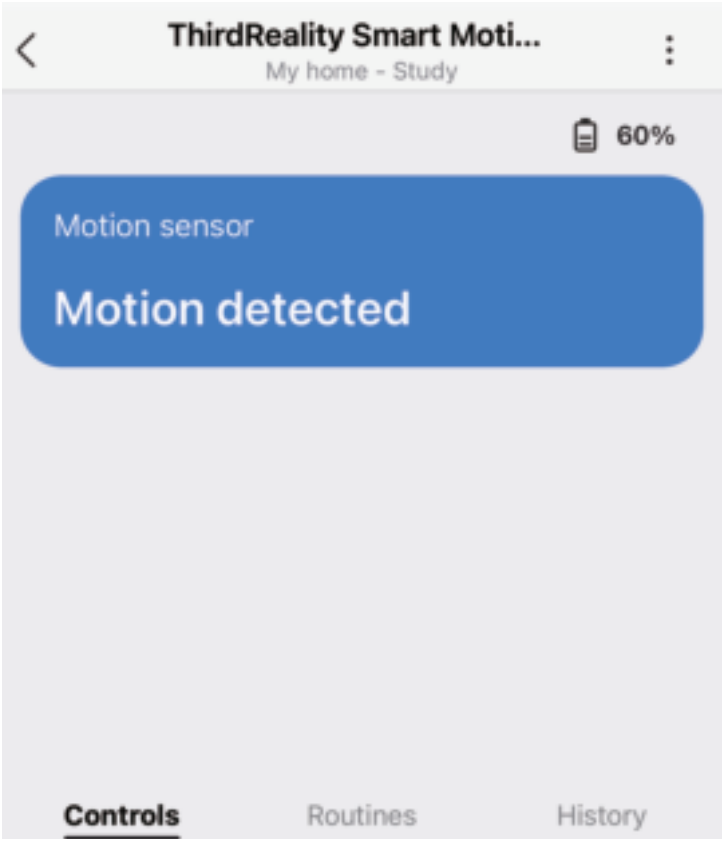


6. The motion sensor will be added to your SmartThings hub in a few seconds.





7. Create routines to control connected devices.



Pairing with Amazon Alexa

App: Amazon Alexa

Devices: Echo speakers with built-in Zigbee hub, Echo 4th Gen, Echo Plus 1st & 2nd Gen, Echo Studio

Pairing steps:

1. Ask Alexa to check for updates before pairing.
2. Open the battery cover on the device and remove the insulation strip to power the device.
3. When the device is powered on, the sensitivity indicator will flash rapidly and the device will enter the Zigbee pairing mode. If the sensor is not in the pairing mode, press and hold the + button for 10 seconds to factory reset the sensor.
4. Tap "+" in the Alexa App, choose "Other" and "Zigbee" to add device, the sensor will be added.
5. You can create routines with the device.

FCC Regulatory Conformance

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could
void the user’ s authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.
This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help important announcement.

NOTE: The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. Such modifications could void the user’ s authority to operate the equipment.

RF Exposure

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment.
This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
