## >> Scientific Knowledge:

**Prevent "Computer Vision Syndrome"**

People will feel uncomfortable if using computer for a long time. Ophthalmologist and optometrist call it as "Compu ter Vision Syndrome (CVS)". Details onCVS are as follows:

1. **Eye fatigue will be aggravated If not blinking for a long time upon watching fluorescent screen.**
   This circumstance is often when reading lots of files, for computer user does not blink or blink as less as possible to avoid missing content. Blinking is critical for eyes protection. It offers position change opportunity to tense crystalline lens and iris muscle, so as to lubricate eyes and prevent eyes from generating itching and burning sensations and other symptoms.

2. **The abnormal reaction "McCullough effect" will be generated after seeing green words in black fluorescent screen while working before fluorescent screen.** Though harmless to body, this symptom can last for several days. White colored space or image turns to pink.
3. **Knowledge regarding operator wearing bifocal glasses.**
   For this kind of people, optimum location of all objects should be on or below chest, with 12-18 inch distance. If the height of fluorescent screen is not appropriate or the distance is too near, computer user will uncomfortably bend or have his or her head keeping a quite unnatural angle, which can cause dizziness, neck sore, shoulder sour or general malaise. According to expert, computer operating is a kind of work required for straining eyes, and it can reduce secretion of lubricant and enzyme in eyes. General speaking, there will be eye dryness and fatigue, ghosting, blurred vision, head and neck soar and other symptoms if times of blinking is less than 5 and interval is relatively long.

## SLEYMSG40

### Smart Eye Massager

**with Heat & Pressure Point Therapy**

### Features:

- Digital Eye Massager System
- Sleek & Fashionable Goggle Visor Style
- Compact & Portable Folding Design, Perfect for Travel
