# USING THE CONTROL PANEL

## SWITCH ON

Flick the switch at the back of the unit. Preset lights will flash in sequence until the power button is pressed.

## POWER

Press to turn the unit on and off.

## RINSE CYCLE

This cycle agitates, without cooling, to rinse the unit.

## PRESETS

5 unique presets that use RapidChill Technology to determine the perfect temperature for the ideal frozen drink.

## TEMPERATURE CONTROL SETTING

**Each preset will start at a default/optimal temperature for ideal texture.** If desired, adjust the temperature for your perfect frozen drink texture.

For thicker, colder frozen drinks, increase the temperature level by pressing the top arrow on the control panel.

For sippable frozen drinks, decrease the temperature level by pressing the bottom arrow on the control panel.

## TROUBLESHOOTING TIPS

### Ingredients not slushing?

if your recipe has not reached the desired texture after 60 minutes, increase the temperature one level.

Wait 10–15 minutes to test the recipe. If the texture still isn't what you desire, increase temperature by one level again. Repeat until desired texture is achieved.

### Slush not dispensing?

For the best dispensing experience, fill the unit to the max fill line and ensure the unit is running. For a smoother dispense experience, decrease the temperature level by pressing the bottom arrow on the control panel. More sippable frozen drinks will dispense smoother.

Refer to pages 10–11 for more troubleshooting tips.

# RAPID CHILL TECHNOLOGY

No ice, no blending, full flavor.

Create more flavorful, less-watered down frozen drinks at home.\*

### Frozen drinks in 60 minutes\*\* or less.

Once frozen drink reaches desired temperature, unit will beep. Auger will continue running to mix your drinks and keep them ready for dispensing at any time.

### Up to 12 hours of runtime for frozen drinks on tap.

The unit will continue running to keep your drinks at the ideal temperature, prevent them from freezing solid, and be ready to dispense when you're craving hits.\*\*

Top up your recipe for neverending frozen drinks for your party needs. Simply add more liquid to the vessel while the unit is running.

\* Vs. BN800.

\*\* Creating drinks can take up to 15–60 minutes depending on ingredients, volume, and starting temperature.

†† To avoid a foamy output when using the Milkshake or Frappé preset, add 680ml or more of desired drink, and dispense contents within 30 minutes of the preset ending.

# PRESETS

5 unique presets use RapidChill Technology for the perfect temperature for your ideal frozen drink.

| FRAPPÉ          |                             | Coffee shop lovers to make frozen treats with or without dairy or dairy-free milks |
| MILKSHAKE       |                             | Dairy, dairy-free and creamier-based drinks                                        |
| FROZEN JUICE    |                             | Naturally sweetened juices                                                         |

Each preset will start at a default/optimal temperature for ideal texture. If desired, adjust the temperature level for your perfect frozen drink texture, see page 2 for more detail on temperature level.

5 PRESET SETTINGS

TEMPERATURE CONTROL

**NOTE:** As the liquid cools the temperature control bars will stop flashing.

# WHAT'S IN THE BOX

\*475ml minimum liquid capacity.  
1890ml maximum liquid capacity.

# ASSEMBLY

Keep unit upright and unplugged for at least 2 hours before first use.

**1.** Ensure all parts are fully cleaned and the motor base is level on a flat, solid surface.

**2.** Install the condensation catch under the evaporator by sliding it into the rail grooves.

**3.** Install the auger by sliding it over the evaporator until it fits into place on the pin.

**4.** With the bail handle up, slide the vessel over the auger and evaporator.

**5.** Lock the vessel into place by pushing the bail handle back to seal the vessel.

**6.** Insert the drip tray in front of the motor base until it clicks into place.

# USING THE NINJA SLUSHI

Minimum input = 475ml. Maximum input = 1890ml.

**1.** Plug in the unit.

**2.** Open the cover on the top of the vessel.

**3.** Press the on/off switch at the back of the unit. The switch is on when the side with the line is pressed down.

**4.** Add liquid(s) through the easy-fill port and close the cover.

**5.** Press the power button to turn on the unit.

**6.** Choose your desired preset. **The preset will start at the default/optimal temperature.** If desired, adjust temperature for your perfect frozen drink texture.

**7.** Temperature Control LEDs pulse showing progress to reach your selected temperature. Unit will beep and LEDs will remain solid once frozen drink reaches temperature. **The unit will hold the drink at this temperature for up to 12 hours.**

**8.** Place a cup on the drip tray, under the handle.

**9.** To dispense, slowly pull the handle. To stop, release the handle back into place. Keep the unit running while dispensing.

## NOTE:

- Stopping the unit also stops the auger and cooling process. You will need to keep the unit running to dispense contents.
- Temperature Control Setting LEDs will pulse while frozen drink is freezing to your set temperature level. Once frozen drink reaches the desired temperature, LEDs will remain solid and unit will beep. Unit will continue running to keep your frozen drink at the ideal temperature and be ready to dispense.
- Creating drinks can take up to 15-60 minutes depending on ingredients, volume, and starting temperature.
- If slushie reaches desired thickness ahead of beeping, dispense and enjoy. See page 2 to adjust temperature and thickness of output.

# USING THE RINSE CYCLE

This cycle agitates, without cooling, to rinse the unit.

1. Dispense any remaining frozen drink.
2. Stop the current preset by pressing the preset button that is currently running.
3. Press the RINSE button.
4. Add warm water up to the vessel's max fill line 1890ml.
5. Slowly dispense the water from the unit soon after filling.

**NOTE:** This water will dispense quickly. Ensure you use a large cup or jug to capture it.

6. Stop Rinse cycle by pressing the RINSE button again.
7. Press the power button to turn off the unit.
8. Repeat until frozen drink is rinsed off the evaporator. After using the Rinse cycle, wash all parts by hand or in a dishwasher to fully clean the unit after each use.

See the next page for more details on cleaning parts after using the Rinse cycle.

# DISASSEMBLY & CLEANING

All parts, except the motor base and evaporator, are dishwasher safe.

For best results, use the Rinse cycle before disassembling and cleaning all parts.

1. Unlock the bail handle by pulling forward and remove the vessel by gently pulling it off the unit. Ensure the vessel is tipped down to prevent remaining liquid from spilling out the back of the vessel. Set aside.

2. Slide the auger off the evaporator. Set aside.

3. Gently slide the condensation catch out of the unit, since there may be residual liquid in the condensation catch. Set aside.

4. Wipe down unit underneath the evaporator with a sanitized or warm, damp cloth.

5. If needed, remove the drip tray and/or spout shroud.
6. Hand-wash all parts in warm, soapy water, or use a dishwasher.

7. Wipe down the motor base and evaporator with a sanitized or warm, damp cloth.
8. Allow all parts to dry thoroughly before reassembling and/or storing the unit.

# REQUIRED SUGAR CONTENT

All inputs must contain at least 5g of sugar per 100ml serving to prevent total freezing. Inputs cannot contain artificial sweetener.

**Low-sugar alert:**  
If the sugar content of the input is too low, the unit will detect it and provide an alert. Temperature Control LEDs will flash one at a time in descending order starting with the top LED, preset LEDs will flash, and the unit will beep every minute for 15 minutes.

**If a drink does not meet minimum requirement of total sugar:**  
Add 1–2 tablespoons flavored syrup, sugar, date sugar, coconut sugar, maple syrup, agave, sugar syrup, or honey per serving. Combine additional sugar with the base prior to pouring into unit.

**Reset the unit by pressing the preset. Restart by pressing the preset again.**

**NOTE: Artificial sweeteners will not aid in meeting total sugar requirements. Freshly squeezed or pressed juice such as apple and orange juice have enough naturally occurring sugars to slush in the unit**

## DIET AND LOW-SUGAR DRINKS

Diet and low-sugar drinks won't turn into slush when they're the only ingredient as too little sugar will prevent recipes from freezing properly. To turn your favourite diet and low-sugar drinks into a Slushi, add the below ingredients to your input:

| TOTAL RECIPE SIZE | ADDITIONAL INGREDIENTS                               |
|-------------------|------------------------------------------------------|
| 700ml             | 8.5g erythritol, 21ml lemon juice & ¼ teaspoon salt  |
| 1400ml            | 17g erythritol, 42ml lemon juice & ¼ teaspoon salt   |
| 170ml             | 20.5g erythritol, 51ml lemon juice & ¼ teaspoon salt |

# ALCOHOL GUIDELINES

When using the frozen cocktail preset, all premade inputs (wine, beer, etc.) must contain between 2.8% and 16% alcohol.

## STRONG ALCOHOL/SPIRIT GUIDELINES

To create frozen cocktails, see chart below for the maximum alcohol/spirit (vodka, tequila, etc.) content per total recipe size.

| TOTAL RECIPE SIZE | RECOMMENDED SPIRIT AMOUNT (40% ABV) |
|-------------------|-------------------------------------|
| 710ml             | 120ml                               |
| 1065ml            | 175ml                               |
| 1420ml            | 235ml                               |
| 1530ml            | 295ml                               |

Chart above is a guide for incorporating alcohol/spirits (35% +) **ONLY**. When using other alcohols such as wine, beer, seltzer, or pre-made cocktails, refer to the chart below or the No-Prep Slushes guide on page 13.

**High-alcohol/sugar alert:** If the alcohol content of the input is too high, the unit will detect it and provide an alert. Temperature Control LEDs will flash one at a time in ascending order starting with the bottom LED, preset LEDs will flash, and the unit will beep every minute for 15 minutes.

**If a drink exceeds the maximum alcohol amount:** Add 60ml water per serving to dilute the input. Reset the unit by pressing the preset. Restart by pressing the preset again.

**NOTE: When using diet or low sugar drinks along with alcohol, erythritol is not necessary.**

# TIPS & TRICKS

Minimum input = 475ml. Maximum input = 1890ml.

For the best dispensing experience, fill the unit to the max-fill line (1890ml).

**DO NOT** add hot ingredients, ice, or solid ingredients like fruit, ice cream, or frozen fruit.

All inputs must contain at least 5g of sugar per 100ml.  
**Refer to page 10 for more details on diet and low-sugar drinks.**

When using the **FROZEN COCKTAIL** program, all premade inputs must contain between **2.8% and 16% alcohol**.  
**Refer to page 11 for more details.**

For best results, chill liquid(s) before adding to the unit.

For your ideal texture, use the Temperature Control setting to adjust.

For the frostiest results, chill serving glasses before dispensing your Slushi creations.

**NOTE:** Pre-frozen ingredients taste sweeter. Worried your drink might be too sweet? Don't worry, it won't taste as sweet after you freeze and slush it into a frozen drink.

## POUR & SLUSH
