PRODUCT DETAILS

Dolby Atmos and UltraHD - even without a living room full of speakers

The VSX-832 with its five powerful direct energy output stages is ready to transform your living room into a Dolby Atmos cinema. Thanks to our newly developed Surround Enhancer, it does not need a rear speaker. With the use of "Dolby Atmos Enabled" speakers, the all-encompassing three-dimensional sound of the new object-based audio format can be produced using only two front and one centre speaker.

Alternatively the VSX-832 naturally supports conventional 5.1 speaker sets as well. The VSX-832 with its four HDMI inputs is ready for the future UltraHD 4K video format (60p, 4:4:4, 24-bit) with all HDR dynamics extensions – so your home cinema will remain state-of-the-art for years to come. You do not even have to connect a player to listen to music. This is because the VSX-832 has its own programming with the integrated streaming services Spotify, Tidal and Deezer.

You can play back locally stored music via WiFi, Bluetooth, AirPlay and, after a firmware update, using integrated Chromecast technology or PlayFi – the receiver consistently offers the right streaming technology for any file format, every smartphone, tablet or PC and all types of network storage. Whether you are enjoying film or music: the VSX-832 meets your every wish rather than dictating to you.
