

eero and eero Beacon – 2nd gen

The Quick Read

- 2nd gen eero — tri-band, Ethernet, 2x power
- eero Beacon — plug-in model with night light
- Next generation mesh technology
- Dynamic rerouting of network traffic
- Advanced network security
- Automatic over-the-air updates

The Whole Story

The **2nd gen eero** looks like the original, but packs more than twice the power. It's the only WAP of its size that's tri-band.

eero Beacon plugs into any outlet and expands a system to cover every corner of any home.

eero's industry-leading TrueMesh™ software uses dynamic routing to keep traffic balanced for the fastest and most reliable WiFi network.

TrueMesh technology knows the signal strength between each eero and constantly recalculates the best path from any device to the Internet.

eero is the only system that can mesh any combination of Ethernet and WiFi devices to ensure the fastest speeds and best coverage.

Any Home Any Configuration

Wired or wireless to meet the needs of your customer's home.

Automatic updates to insure your customer's network is always up to date.

WPA2 out of the box for an unmatched secure network installation.

Thread 1.1 border router for future proof installations.

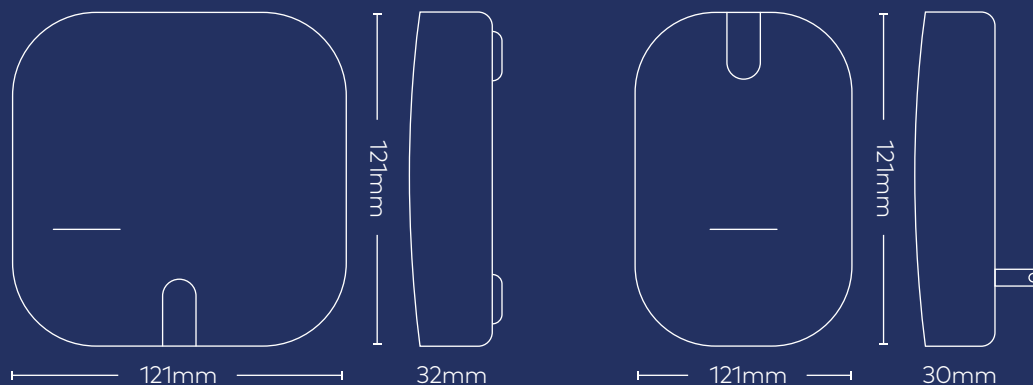

Pro only network set-up and transfer feature.

Expandable to fit any home; any number of rooms, square footage, or building material type.
