

INTRODUCTION TO THE RINGCENTRAL APP

The RingCentral app is a unified communications platform that enables you to make and receive calls, send text messages and chats, send faxes, and start video meetings wherever you are – everything you need in one app.

MESSAGE. VIDEO. PHONE.

From sharing ideas to team collaborations, communicating is made easier with all of your conversations in one place:

- **Team Messaging** – Send messages, share files, set up events, and manage tasks.
- **Video Meetings** – Start a meeting straight from a conversation.
- **Business Phone** – Utilize the built-in phone system to never miss a call.

DEVICE AND MODE SWITCHING

The RingCentral app is easy to use, simple to navigate, and works on any device. Send a message, start a video meeting, or jump on a phone call from your browser, mobile, or desktop app.

You can also flip live calls and meetings between any device when you are on the go. Plus, switch from a call to a video meeting and vice versa with a single tap.

INTEGRATIONS

Integrate apps that are vital to all roles within your organization, with over 180 integrations in the RingCentral [app gallery](#).
