siemens-home.bsh-group.com/za/

Siemens. The future moving in.

Technologies that not only improve our everyday life, but our future too.

Dishwashers energy labelling

The aim of the energy label of the dishwasher is to reduce energy consumption, while at the same time not having any adverse effect on the cleaning and drying performance of the appliance. Dishwashers, in general, use the Eco50°C programme as its standard programme upon which energy consumption is rated. The energy label for dishwashers comprises 3 classifications namely:

- Energy efficiency
- Cleaning performance
- Drying performance

Washing machines energy labelling

The aim of the energy efficiency label is to offer consumers a standardised method of choosing the most energy efficient appliance, while at the same time offering you the best possible washing results.
Washing machines use the Cotton 60°C programme as its standard programme upon which energy efficiency, washing performance and spin-drying performance levels are rated.
The energy label for washing machines compromises 3 classifications (ranging from "A" to "D" rating) namely:

- Energy efficiency
- Washing performance
- Spin-drying performance

Tumble dryers energy labelling

There is a difference between condensation and vented dryers, with condensation dryers having a lower energy efficiency than vented dryers.

Fridges and freezers energy labelling

Fridges and freezers are the most hardworking appliances in your kitchen as they are on the go 24 hours a day, seven days a week. The energy label is able to provide information about their performance and physical characteristics. These include the annual consumption of energy (in kWh p/a) as well as the storage volume of the compartments (in Litres).
All Siemens cooling appliances, even the entry level models have very efficient energy ratings.
It is important to note that the energy label supplies you with the net volume as opposed to the gross volume of the unit.
This is the usable volume of the fridge as opposed to the overall volume, and can therefore be relatively important when making a decision as to which unit is best for you. Siemens cooling products have been converted to CFC and HFC free materials in 1993 already. This means that the harmful substances previously used in the insulation materials have been replaced with environmentally friendly natural gases which do not damage the ozone layer or increase the harmful greenhouse effect.

Energy efficiency ratings

Energy efficiency labels are informative labels affiliated to manufactured products. These labels are able to indicate a products energy performance in order to provide consumers with the necessary data for making informed purchase decisions.
The more efficient a product is the less energy it requires and the more you get for your money. Not only is this saving of electricity good for your wallet, but it is good for the environment too; between 1995 and 2000 there has been a saving of three-quarter million-tons of CO2 alone in Europe, by improving the technique of large household appliances. The energy label ranks the appliance's efficiency from "A+++" to "D".
These are categorised as follows:

Class A+++ to A+	excellent
Class A to B	good
Class C to D	average

Ovens

As intuitive as cooking itself.

*Pictures shown are for illustration purpose only. Product subject to stock availability.

Outstanding taste, cooked in the time you have.

The iQ700 Ovens with varioSpeed.

There are things in life that are worth spending more time on like a business meeting, a weekend adventure or getting to read a few more pages of a bedtime story. Whenever you find yourself in a situation where you want to spend your time differently, but not necessarily cooking, varioSpeed allows you to. No matter whether it's a little snack or a masterful salmon recipe, you can now adjust the cooking time to your own speed of life. Ultimately giving you all the flexibility your less ordinary life requires.

varioSpeed*

Twice as fast in combination: by choosing the integrated microwave function with a conventional cooking option, you can speed up the preparation of your dishes when you need to – without compromising on the quality you would expect. Save up to 50% of your time, to give you the freedom when you require it.

From desserts to roasts and even frozen food, varioSpeed can be conveniently selected to cook a variety of meals when you want to take your time on other things. For even more flexibility; cooking, reheating or quickly defrosting a meal at the end of the day is fast and efficient thanks to the simultaneous heating using microwaves, and a conventional cooking function such as 4D hot air. Save time in the kitchen when you want to and spend it doing the things you love. For a life less ordinary.

varioSpeed saves up to 50% of your time and allows you to adjust the cooking time to your own speed of life.

One oven, many functions. Now it’s even easier to cook perfect dishes.

Bake Sensor*

The Bake sensor monitors the conditions within the oven and automatically adjusts the baking process. This automatic baking system allows for the preparation of a wide range of baked goods and convenience goods.

Multipoint Temerature Probe*

The Meat probe takes the guess work out of cooking. It measures the temperature of the meat at three separate points for increased accuracy and has a built-in temperature gauge. As the meat probe attaches to the oven, when the core temperature has reached the programmed temperature the oven will switch off. It is ideal when trying to determine the readiness of meat and poultry.

Added Steam function*

Prepare perfectly crispy and juicy dishes with PulseSteam, ideal for adding moisture and avoiding dried out food when reheating. PulseSteam offers more flexibility in just one appliance. Steaming retains the flavour, vitamins and nutrients in food. Vegetables keep their bite, shape and appealing natural colour. They don’t just look good. They’re also healthy and delicious.

Dish Categories*

Simply select the required dish and enter the weight – the cookControl Plus function immediately provides full colour images with individual recommended settings for perfectly cooking the dish you want. Using cookControl Plus you can achieve the best results for a variety of meals with less to worry about and complete peace of mind.

*Selected models only

Simply the best.

Life’s pleasures often lie in the simplest things. A philosophy that is essential to the design of the iQ700 ovens with their easy to use clearText TFT display and time saving activeClean® self-cleaning system. Supreme features that mean you can enjoy cooking even more.

iQ700 Ovens with TFT touchDisplay Plus.*
It’s never been this easy to keep an eye on your cooking. Bigger size, brighter colours, higher contrast and better resolution. And now controllable with the touch of a finger. The new TFT touchDisplay Plus is the most innovative and intuitive user interface available for an oven.

Say goodbye to multiple dials and printed icons, the TFT touchDisplay Plus offers more than just control of your oven. It gives tips and information on each programme, full colour graphics and images, it can even suggest the correct way to cook your dishes with cookControl Plus. Clear to read from any angle, it’s advanced yet easy-to-use technology for effortless cooking.

Three types of TFT displays are also now available across the iQ700 oven range. The slightly smaller TFT touchDisplay offers all the functionality of a touchscreen display with crisp text and images. Smaller still, the TFT Display can be operated with touchControl buttons either side of the screen, yet still has clear programme information. Thanks to the menu structure on all of our ovens, which is optimised for convenient and easy-to-use touch navigation, it’s even easier to select the perfect settings. Designed to serve one purpose: giving you full control.

The easiest way to clean an oven: let the oven clean itself.

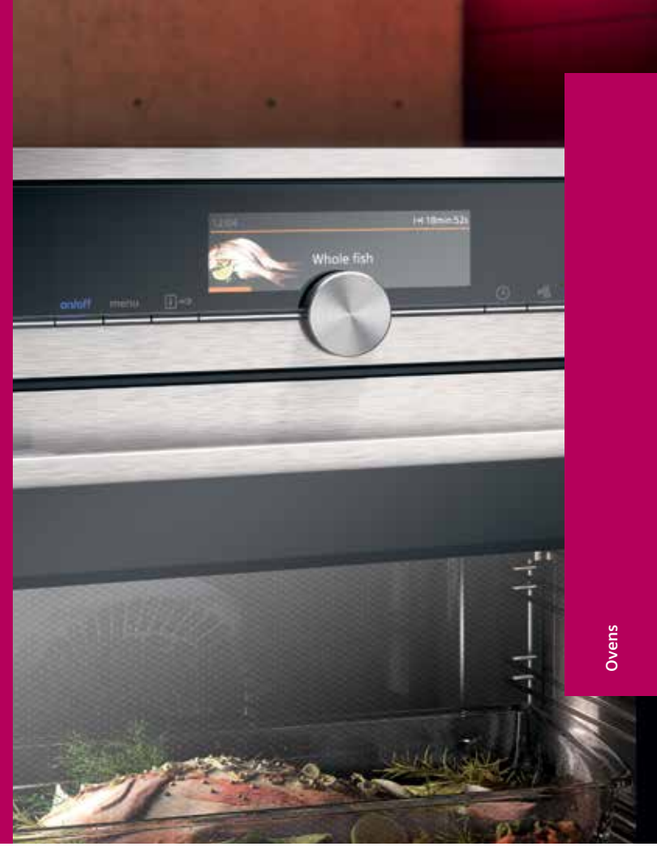
iQ700 Ovens with activeClean.*
Enjoy preparing food without worrying about the consequences. No matter how creative it gets in the oven interior, you no longer need any chemical treatments to get it clean again – only the push of a button. Hassle-free, the oven cleans itself thoroughly with activeClean. It does so by heating up to very high temperatures – turning all residues into ash, which can easily be wiped away. This process is called pyrolysis and is the most convenient and efficient way to clean the whole interior of your oven.

And now, even the telescopic rails, bars and tray are specially designed to be used with activeClean so you don’t need to remove them at all. Only the wire shelf needs to be removed. activeClean makes it possible to forget about the chore of cleaning your oven and gives you back your time to spend on the things you love.
For a life less ordinary

activeClean® – ovens that clean themselves.

*Selected models only

Stylish design and intelligent innovation perfectly engineered to meet the demands of today’s busy lifestyles. No matter what you’re cooking there is a range of functions and features to help you to cook-up the perfect meal.



Hot air grilling*

The hot air grilling system prepares large roasts, such as duckling or goose, with a rotisserie quality. This is done by the grill and fan being switched on and off alternatively (patented interval control mode).

Defrost*

The defrosting heating method is perfect for gentle defrosting of frozen food items.

Large surface grill*

The large surface grill is ideal when you would like to prepare fish, steaks or toast in the oven. It’s also suited for au gratin dishes.

Small surface grill*

When you use the small surface grill only the middle part of the grill-heating element is heated. This is the ideal setting for small amounts, e.g. four slices of toast.

Intensive heat*

Intensive heat is ideal for pizza, bread and frozen food because of the unsurpassed strong bottom heat.

Keep warm function*

The keep warm function keeps the correct temperature for a longer period of time. Plates and cups are kept at the correct temperature by means of the preheat function.

An oven door that opens and closes gently and quietly thanks to the intelligent mechanism: softMove*

For a calmer kitchen, softMove offers softer opening and closing of the oven door without having to push and pull. The intelligent dampers ensure that the oven door is left to open and close gently and quietly. Available on all iQ700 built-in ovens.

Everything put in a good light.

Depending on the model, there are different kinds of illumination inside the oven. Whether it’s the standard Halogen light, LEDs or the most advanced Multilevel LED strip, they all provide a brilliant view of your dishes without having to open the oven door.

Sabbath setting*

On a day of rest use the oven without having to operate it: With this setting, the oven maintains a temperature of between 85C and 140C for up to 73 hours. You can eat thus warm food on the Sabbath, without operating the oven

Always pleases the eye.

The same coordinated design, throughout the iQ700 range.

Different models come with different functionalities, however with the iQ700 range of compact45 appliances, the design and style is always coordinated to offer more flexibility when designing your kitchen.

Every appliance upgraded

No matter which model you choose from the iQ700 range, they all feature a TFT display to show programme information. The smallest TFT Display is operated by touch-control buttons either side of the screen and can be read from any angle. No more confusing icons, the screen displays text to make it even easier to use your appliance.

More options in one

As well as multifunction ovens with microwave, the iQ700 range can also be used as microwaves on their own. Power levels ranging from 90W to 1000W mean the microwave function can be used for gently defrosting food, reheating, cooking and quickly heating up drinks.

The iQ700 compact45 range: the perfect solution for complete coordination in your kitchen.

The healthy option.

When compromise is not an option, hot air steam is the solution.

The iQ700 compact45 steam oven offers even more possibilities to prepare perfectly tasty dishes with ease. Use fullSteam to cook vegetables, fish or potatoes, without losing taste, colour or vitamins. And since no oil is needed, you can cook in the healthiest possible way. Since all compact45 appliances are coordinated in design, match with the iQ700 single oven.

Convenient access to the water tank.

The many benefits of steam

As well as healthy cooking, steam is ideal for reheating and defrosting food. As the process gently adds moisture, you can reheat dishes when in a hurry, without losing taste, or spontaneously defrost food quickly.

More cooking possibilities

Our steam ovens are multi-functional meaning you can cook as a conventional oven or in combination with the pulseSteam function. Whether it's a quick and healthy meal after work or an impressive weekend fish dish, a Siemens compact45 steam oven lets you choose how you want to cook your food.

The easiest way to cook with steam

Cooking with steam is simple with an iQ700 compact45 steam oven. Open the fascia with the touch of a finger and the front panel automatically lifts to reveal the 1 litre capacity water tank. As the water tank is outside of the oven cavity, it's now possible to refill the tank while cooking, without losing any steam or disturbing your cooking.

Healthy food made delicious with the power of steam.

Coffee indulgence.

What takes a barista years to learn, you can do at the touch of a button.

The finishing touch for your kitchen or dining area, a Siemens coffee centre is the ultimate appliance for coffee lovers and those who like to entertain. Enjoy a better selection of coffee with the touch of a finger, all made to the optimum temperature to release the best taste and aroma using the intelligent sensoFlow heater inside.

Perfect results and at the size you want.

AutoMilk Clean

Now you can clean your coffee maker as easily as you prepare your morning pick-me-up. Each time you make a coffee drink with milk, the milk system is automatically rinsed out with a blast of steam. The coffee machine takes total charge of the milk system's daily maintenance, so that you can concentrate on enjoying your cappuccino or latte macchiato instead of cleaning.

sensoFlow for coffee perfection

Different coffees require the espresso shot to be heated at different temperatures to achieve the perfect result. sensoFlow does this automatically, providing you with a delicious beverage again and again.

For an added boost

aromaDoubleShot gives you that extra boost when you need it most. Because the second shot uses a new set of beans, there's no compromise on the flavour.

individualCup volume size

Precisely the amount of coffee you want – exactly how you want it. The cup volume can be set to perfection, so that your favourite coffee fits in your favourite cup perfectly.

OnceTouch DoubleCup

You can make two of the same coffees simultaneously, even those that use milk.

No more waiting around thanks to the fastest first cup every time.

Model	CT636LES1

Product description	**iQ700** **Integrated fully automatic espresso/coffee machine**
Comfort and safety	**Flavour** • SensoFlow System: The innovative heating system guarantees a constant brewing temperature • AromaPro Concept: Ideal contact pressure for optimal aroma extraction • One-touch preparation: Ristretto, Espresso, Espresso Macchiato, Coffee, Cappuccino, Latte Macchiato, Caffe Latte at the touch of a button • AromaDouble Shot: Extra-strong coffee with less bitterness thanks to two grinding and brewing processes • Beverage temperature adjustable individually: coffee 3 levels, hot water 4 levels **Convenience** • MyCoffee: Save 8 beverages with individual names and adjustable mixing ratio of milk and espresso • IndividualCup Volume: Cup sizes adjustable individually • Coffee outlet and milk frother height-adjustable: Up to 15 cm high • OneTouch DoubleCup: Prepare two cups simultaneously for all coffee and milk specialities • Removable Water tank (2.4 Litres volume) **Performance** • SilentCeram Drive: Quiet premium grinder made from non-wearing ceramic • CoffeeSensor Pro: The grinding unit automatically adjusts to bean variety • One-touch coffee milk specialities with especially fine-pored milk froth thanks to an innovative milk frother • In addition to beverages also available separately: milk foam, warm milk, hot water • Reduced heat-up time: Fastest first cup • Water pump with 19 bar pressure • Separate chute for ground coffee **Cleaning** • Removable brewing unit: Easy and hygienic cleaning under running water • AutoMilk Clean: Fully-automatic steam cleaning of the milk system after every beverage • Milk frother removable and dishwasher-proof • SinglePortion Cleaning: Complete emptying of all pipes after each brewing process • Automatic rinsing program when switching off and on • Drip tray and coffee grounds container removable and dishwasher-proof • Calc'nClean: Automatic cleaning and descaling programme **Miscellaneous** • Bean container with aroma protection lid (500 g volume) • Coffee outlet and keys are illuminated • Grinding fineness adjustable (multi-level) • Display language selectable • Child safety lock: Unintended brewing process not possible
Product specs	Overall (H x W x D): 45.5 x 59.4 x 38.5 cm Aperture (H x W x D): 45.0 x 56.8 x 40.0 cm Rating: 1700 W
Barcode	**4242003645437**

Induction & ceramic hobs

Easy to clean, easy to cook with.

*Pictures shown are for illustration purpose only. Product subject to stock availability.

Speed. Energy-efficiency. Style.

Our traditional induction hob range feature automatic pan recognition ensuring that only the pan in contact with the surface heats up. Induction cooking is quicker than gas and much more energy efficient, allowing you to enjoy speedy food whilst being kinder to the environment.

Easier to clean and safer to use, Siemens induction hobs stand out in your kitchen.

Greater control with touchSlider.

dual lightSlider

Dual lightSlider*

The perfect symbiosis of precisicon, convenience and design. The optimal way to control your cooktop. Innovative lightSlider technology combines innovative light design, with simple precise heat regulation.

Designed with sleek controls that are simple to use, and state-of-theart technology that gives you a precise control over your hob. When activated, the power level is displayed for each zone, allowing you to monitor their status at a glance.

flexInduction

flexInduction*

One cooking zone, a thousand possibilities
Pots and pans are as different as the dishes you cook with them. With flexinduction you can flexibly adjust your cooktop to fit. The cooking area can be tailored to your needs, enabling you to use a small area or you can choose to link the zones together to form one large zone. Only if cookware is detected will the individual inductors work

Automatic pan recognition*

Energy-efficiency is at the heart of Siemens products, and is at the heart of automatic pan recognition. Only the area of the hob in contact with the pan receives energy, meaning energy isn't wasted by heating the entire unit. Not only will this lower your carbon footprint, but it will also reduce your utility bills.

powerMove Plus

PowerMove Plus*

This function activates the entire flexible cooking zone, which is divided into three cooking areas and which has preset heat settings. This means that an item of cookware can be moved during the cooking process to another cooking area with another heat setting.

PanBoost*

Shorter heat-up times for pans (and pots with non-stick coating) This function only runs 30seconds (compared to 10min for powerBoost).
After 30 seconds it automatically switches to level 9

High performance. High speed.

Highest quality stainless steel for a sleek, professional finish.

Gas hobs

High-performance, high-speed.

*Pictures shown are for illustration purpose only. Product subject to stock availabilty.

Professional and amateur cooks alike appreciate the advantages of cooking over an open flame, and with Siemens they get the ideal way to do it – modern gas hobs in high-end styling.
With Siemens gas hobs, pots and pans heat up quickly and your food is ready on the dot. All Siemens gas hobs meet the highest safety standards and have modern burners, whose stepless adjustment lets you get the perfect heat distribution for your cookware.

Total convenience guaranteed

Swift, fluid motions and ease of use are the focal points of control dial ignition. Ignite the flame whilst setting its intensity by simply turning and pushing the individual hob control with one hand, whilst preparing food with the other. Total convenience guaranteed.

High-performance. High-speed

Experience the wok burner The only way to cook a stir fry – enjoy precision cooking with the dual controlled wok burner. The inner and outer flame can be controlled independently, with the power burner allowing for extremely fast cooking.

Best of both worlds

When your heart is still ruled by the traditional method of cooking with gas but you would like to have the option of being more flexible with your cooking, you can add the more energy efficient flexInduction domino hob or really stand out of the crowd with the Teppan yaki cooktop enjoying the best of both worlds.

Ideal for the perfect jus

Ideal for simmering the perfect jus, the simmer burner cap fits on the smallest burner and diffuses the minimum power heat over a wider surface area, avoiding hot spots, perfect for simmering.

Safety first

When you have a window open nearby whilst cooking, the flame can sometimes be extinguished. All Siemens gas hobs feature a flame failure safety device, which cuts-off the supply of gas to the individual burner should the flame accidentally go out.

StepFlame*

Perfect cooking results with nine adjustable and reliable power levels.

There is no need to check the height of the flame. Perfect cooking results each and every time. Innovative and patented valve technology regulates the gas output precisely and noticeably from levels 1 to 9.

Traditional precision cooking that puts you in the driving seat.

Extractors

Outstanding performance, intelligently designed.

*Pictures shown are for illustration purpose only. Product subject to stock availabilty.

Enjoy a fresher kitchen.

With open plan living becoming more and more popular, a quiet, efficient and powerful extractor is necessary.

Ducted or recirculated air – whatever is right for your kitchen*

With the cooker hoods of the air extraction type, the kitchen air extracted by the fan is ducted to a vent through an outside wall (telescopic wall outlet) or into an air shaft. In contrast to the exhaust-air principle, which exchanges the air in the kitchen, the recirculating system scrubs the cooking fumes by passing them through grease filters and activated charcoal filters. The clean air is then returned to the kitchen.

Rim ventilation*

The rim filter is Siemens' patented stylish filter with a large stainless steel front. The innovative and easy-to-clean rim ventilation feature absorbs over 90% of grease from cooking steam.

BLDC - technology*

A BLDC (brushless direct-current) motor runs quietly and faultlessly at particularly high power. Its brushless drive system generates very little friction, saving a considerable amount of energy while meeting the specific requirements of household appliances

cleanAir*

With cleanAir, Siemens offers an innovative recirculating module. Thanks to the large, slatted surface of the special active carbon filter, the cleanAir recirculating module can neutralise up to 95% of odours, putting it on par with a ducted system. This module is also extremely quiet.

Cooling

The perfect environment for fresh food.

*Pictures shown are for illustration purpose only. Product subject to stock availability.

The perfect environment for fresh food.

Food preservation technologies that mean you can store a lettuce for longer and it will still taste as fresh as the day you bought it.

hyperFresh*

hyperFresh provides the ideal environment for your food, the hyperFresh storage system keeps your food fresh for as long as it needs to – Fresh for up to three times longer.

hyperFresh plus*

The new hyperFresh plus drawer doesn't just store fruit and vegetables, it provides them with the right conditions to keep them fresh for up to two times longer than usual. Whether it's fruits or vegetables, simply switch the control and the humidity will be adjusted for optimum storage of your food.

HyperFresh Premium*

The two hyperFresh premium 0°C drawers are especially designed for the cooling needs of fish and meat. Keep them fresher in ideal conditions near 0°C for up to two times longer. The separate compartments also avoid unpleasant smells to transfer and both boxes can be easily pulled out with one hand to make room for other foods and drinks, cooling them down quicker and providing refreshing drinks sooner.

Ideal storage for meat and fish*

Ideal for storing meat and fish, the coolBox creates an environment that is almost 3°C cooler than the rest of the fridge. The coolBox stores meat and fish at the optimum preservation temperature, whilst allowing other food in the fridge to be chilled at around 4°C. Food tastes better for longer and there is less food wastage.

No-frost technology*

Our refrigerator-freezer combinations and freezers with No-frost technology allow you to freeze and store food at all levels throughout the freezer compartment. Say goodbye to the inconvenience of rearranging your frozen foods – just freeze wherever there happens to be available space. In freezers and fridge/freezer combinations equipped with No-Frost the cool air is distributed over the whole compartment by specific ventilation. The air is not as humid as warmer air and the thawed water evaporates outside the fridge. The result is dry cool air and no ice on side panels, rear or food. You do not have to defrost your freezer anymore.

freshSense*

This technology ensures longlasting freshness in fridges and freezers. Smart electronic modules linked to up to five sensors constantly cross-check the outside and inside temperatures. They balance out temperature fluctuations and thus keep the refrigeration of the food steady

Electronic temperature control*

The temperature is controlled accurately. The temperature that is displayed on an exterior display will give the correct information about the temperature inside the appliance.

10 year warranty*

A 10 year warranty on your compressor will give you additonal piece of mind when purchasing a fridge.

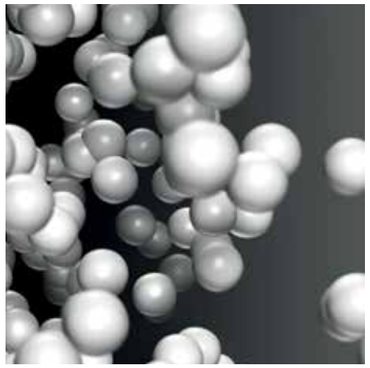
Failure to do so may affect the guarantee.

Dishwashing

Extra innovations for extra shine.

*Pictures shown are for illustration purpose only. Product subject to stock availabilty.

Saving energy naturally.



Energy efficiency meets cutting edge design.

Using advanced drying technologies, Siemens dishwashers keep energy consumption to a minimum. Zeolith®, a form of naturally occurring mineral, has the astonishing ability to absorb moisture and convert it to heat.

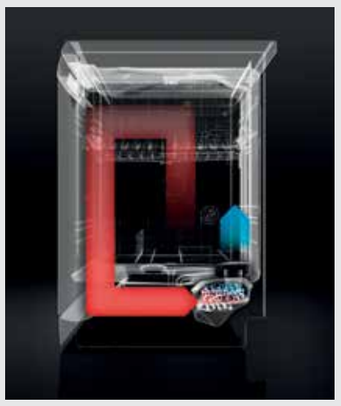
What does this mean for you? The heat produced naturally by the Zeolith® is used for the drying cycle. No additional energy is therefore required to heat up the contents of your dishwasher for the drying process (as with a standard drying system). This results in perfect drying, with less energy usage.

The Zeolith® mineral is stored in the depths of the dishwasher; this regenerates itself and keeps working for the entire lifetime of the machine. Combine this with the economy 50 programme to get brilliant results with minimal energy.

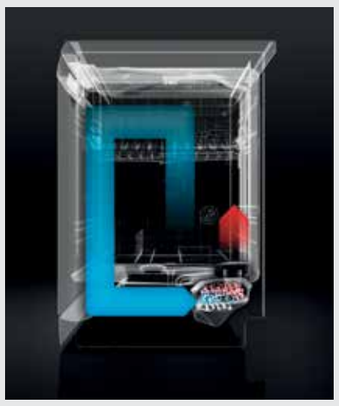
Add an extra shine

Shine & Dry is a unique energy efficient function that produces table ready, gleaming glassware by harnessing the power of Zeolith®. This special drying cycle not only brings out a streak free shine in most delicate glassware and tableware but also means extra dry and stain free plastics, pots and pans.

Add an extra shine - Zeolith® absorbs moisture and converts it to heat energy.



Add an extra shine - As the mineral is heated during the cleaning cycle, it is recharged and ready to absorb moisture once more.



*Selected models only

Clean dishes before the evening is over.

Intensive zone*

New Intensive Zone option is the solution for mixed loads. Heavily soiled and delicate dishes are perfectly cleaned in the same cycle. The entire lower basket is converted into a heavy duty cleaning zone by increasing water pressure and the cleaning temperature in the lower basket, whilst water pressure stays according to the selected program in the upper basket.

Ever needed your dishes cleaned quickly, forgotten to put the dishwasher on in the morning, or simply need clean plates before your guests arrive?

VarioSpeed Plus*

That's why we've introduced varioSpeed Plus, the perfect time saver. Giving you the flexibility to spend time on more important things, varioSpeed Plus reduces the time it takes to wash and dry a full load down to a third. Ideal when you need your cutlery and plates in a hurry, just press the varioSpeed Plus button in conjunction with your desired programme*and it will run the dishwasher significantly faster without compromising on wash quality. Used together with the Eco 50 programme, varioSpeed Plus will wash and dry a full load in just over an hour. Giving you time saving solutions when you need them the most and sparkling clean dishes fast.

*Not possible for all programes

Dosage Assist*

Reliable cleaning everytime. Special tray for desolving of detergent tabs. Convenient loading of detergent, controlled and fast dissolving everytime. Clean handling.

Vario Drawer*

More loading capacity with Vario Drawer 12+2=14, extra room for small dishes and bigger cutlery items. Easy loading of wine glasses in the upper basket.

varioHinge*

The varioHinge is the optimal solution for the smallest possible gaps between the front panels of kitchen units, low base dimensions and high countertop levels. With appliances featuring the varioHinge the fully integrated front panel moves up slightly when the machine is opened. This does away with large gaps when dishwashers are installed at a high level. You can also forget about collisions with the base and floor pan.

MachineCare*

The Machine Care programme is used to remove grease and limescale from the dishwasher interior with the assistance of a standard machine-care-detergent. The programme run time is 90 min with medium to high water temperatures.

Guarantee Conditions*

Guarantee is not valid if appliances are used in an industrial application. Appliance must be installed by a licensed tradesman according to BSH and national or local regulations.

Total guarantee period for built-in appliances: 5 years from date of purchase.

Total guarantee period for CT636LES1 coffee machine: 3 years from date of purchase.

Transport damages will only be accepted 7 days after delivery to end user or contractor working on behalf of end user (kitchen company, building contractor).

First year full guarantee on parts and labour – excluding very fragile parts i.e. glass, plastic, light bulbs.

Second and third year on functional parts only: electronics, timers, switches, locks, clocks, thermostats, fans plus labour to repair or replace.

Fourth and fifth year on functional parts only: electronics, timers, switches, locks, clocks, thermostats, fans plus labour to repair or replace.

After guarantee expires, customer must pay a charge of R430 excl. VAT (annual increase applies) towards labour costs.

Condition governing appliance service

1. A guarantee claim ceases once repair or work is undertaken by a person not entitled by BSH to do so or if the appliance is provided with spare parts, attachments or accessories that are not original, therefore causing damage.
2. The guarantee is given in such a manner that defective parts are repaired free of charge or – and this is BSH choice – replaced by perfect parts.
3. A claim under guarantee does not cause an extension of the guarantee period nor does it start a new guarantee period.
4. If BSH refuses repair or repair fails and the end user so requires, a replacement of equal value is supplied free of charge within the above guarantee period.
5. These conditions of guarantee are applicable to appliances purchased in South Africa. If appliances are taken abroad and meet the technical requirements (e.g. voltage, frequency, type of gas etc) of such country while also being suitable for the respective climate and environmental conditions, these terms of guarantee are applicable only if BSH have an approved customer service network in such country.
