**Description of this Thermometer**

- ① ON/OFF button
- ② Display
- ③ Battery compartment cover
- ④ Measuring sensor / measuring tip
- ⑤ Cleaning and disinfecting area (thermometer probe only)

EN**Cleaning and Disinfecting**

For disinfection in home use environment, use a 70% Isopropyl alcohol swab, or a cotton tissue moistened with 70% Isopropyl alcohol to wipe surface pollutants off the thermometer probe (note: consider the application and safety instruction of the disinfectant manufacturer). Always start wiping from the end of the thermometer probe (approx. the middle of the thermometer) towards the thermometer tip. Afterwards the entire thermometer probe (see number ⑤ in the drawing) should be immersed in 70% Isopropyl alcohol for at least 5 minutes (max. 24 hours). After immersion, let the disinfectant dry off for 1 minute before next use. Avoid immersing or wiping the display to protect it from fading.

The thermometer is not intended for professional use.

Battery Replacement

When the **»** symbol (upside-down triangle) appears in the display, the battery is flat and needs replacing. To replace the battery remove the battery compartment cover ③ from the thermometer. Insert the new battery with the + at the top. Make sure you have a battery of the same type to hand. Batteries can be purchased at any electrical store.

Technical Specifications

Type:	Maximum thermometer
Measurement range:	32,0 °C to 43,9 °C
	Temp. < 32,0 °C: display «L» for low (too low)
	Temp. > 43,9 °C: display «H» for high (too high)
Measurement accuracy:	± 0,1 °C; 34 °C - 42 °C ± 0,2 °C; 32,0 - 33,9 °C and 42,1 - 43,9 °C
Operating conditions:	10 - 40 °C; 15-95 % relative maximum humidity
Storage conditions:	-25 - +60 °C; 15-95 % relative maximum humidity
Battery:	LR41 (1.5V) / SR41 (1.55V)
Battery lifetime:	approx. 4500 measurements (using a new battery)
IP Class:	IP22
Reference to standards:	EN 12470-3, clinical thermometers; ASTM E112; IEC 60601-1; IEC 60601-1-2 (EMC); IEC 60601-1-1
Expected service life:	5 years or 10000 measurements

This device complies with the requirements of the Medical Device Directive 93/42/EEC.

Technical alterations reserved.

Guarantee

This device is covered by a lifetime guarantee from the date of purchase. During this guarantee period, at our discretion, Microlife will repair or replace the defective product free of charge. Opening or altering the device invalidates the guarantee. The following items are excluded from the guarantee:

- Transport costs and risks of transport.
- Damage caused by incorrect application or non-compliance with the instructions for use.
- Damage caused by leaking batteries.
- Damage caused by accident or misuse.
- Packaging/storage material and instructions for use.
- Regular checks and maintenance (calibration).
- Accessories and wearing parts: Battery. Should guarantee service be required, please contact the dealer from where the product was purchased, or your local Microlife service. You may contact your local Microlife service through our website: www.microlife.com/support

Compensation is limited to the value of the product. The guarantee will be granted if the complete product is returned with the original invoice. Repair or replacement within guarantee does not prolong or renew the guarantee period. The legal claims and rights of consumers are not limited by this guarantee.

WARNING: The measurement result given by this device is not a diagnosis. Do not rely on the measurement result only.

Batteries and electronic devices must be disposed of in accordance with the locally applicable regulations, not with domestic waste.

Read the instructions carefully before using this device.

Type BF applied part

Turning on the Thermometer

To turn on the thermometer, press the ON/OFF button ①; a short beep signals «thermometer ON». A display test is performed. All segments should be displayed.

Then at an ambient temperature of less than 32 °C, an «L» and a flashing «» appear at the display field ②. The thermometer is now ready for use.

Function Test Correct functioning of the thermometer is tested automatically each time it is turned on. If a malfunction is detected (measurement inaccuracy), this is indicated by «ERR» on the display, and a measurement becomes impossible. In this case, the thermometer must be replaced.

Using the Thermometer Choose the preferred measuring method. When taking a measurement, the current temperature is continuously displayed and the «» symbol flashes. If the beep is heard 10 times and the «» is no longer flashing, this means that the measured increase in temperature is less than 0,1 °C in 16 seconds.

To prolong the battery life, turn off the thermometer by briefly pressing the ON/OFF button ①. Otherwise the thermometer will automatically turn off after about 10 minutes.

Storage of Measured Values If the ON/OFF button ① is pressed for more than 3 seconds when turning on the thermometer, the automatically stored maximum temperature during the last measurement will be displayed. At the same time, a «M» for memory will appear on the display. About 2 seconds after the button is released, the temperature value disappears and the thermometer is ready for measurement.

Measuring methods / Normal body temperature

► In the armpit (axillary) / 34,7 - 37,3 °C Wipe the underarm with a dry towel. Place the measuring sensor under the arm into the center of the armpit so the tip is touching the skin and position the patient's arm next to the patient's body. This ensures that the room air does not affect the reading. Because the axillary takes more time to reach its stable temperature wait at least 5 minutes, regardless of the body's cold or hot condition.

► In the mouth (oral) / 35,5 - 37,5 °C Do not eat or drink anything hot or cold 10 minutes before the measurement. The mouth should remain closed up to 2 minutes before starting a reading.

Position the thermometer in one of the two pockets under the tongue, to the left or right of the root of the tongue. The measuring sensor ④ must be in good contact with the tissue. Close your mouth and breathe evenly through the nose to prevent the measurement from being influenced by inhaled/exhaled air.

If this is not possible due to blocked airways, another method for measuring should be used.

► Approx. measurement time: 1 minute!

► In the anus (rectal) / 36,6 - 38,0 °C Attention: For the prevention of rectal perforation in children (younger than 3 years), we recommend using another measuring method, or the use of a thermometer with flexible tip.

Carefully insert the measuring sensor ④ of the thermometer 2 to 3 cm into the anal aperture.

The use of a probe cover and the use of a lubricant is recommended. If you are unsure of the measurement method, you should consult a professional for guidance/training.

► Approx. measurement time: 1 minute!

► In the armpit (axillary) / 34,7 - 37,3 °C

Close your mouth and breathe evenly through the nose to prevent the measurement from being influenced by inhaled/exhaled air.

If this is not possible due to blocked airways, another method for measuring should be used.

**Popis teplomeru**

- (1) Tlačidlo ON/OFF (ZAP/VYP)
 (2) displej
 (3) Kryt priestoru pre batériu
 (4) Meraci snímač / meraci hrot
 (5) Cistiaci a dezinfekčný priestor (iba sonda teplomera)

Dôležité bezpečnostné pokyny

- Postupujte podľa návodu na použitie. Tento návod obsahuje dôležité informácie o prevádzke a bezpečnosti tohto prístroja. Pred používaním prístroja si dokladne prečítajte tento návod a uschovajte ho na ďalšie použitie.
- Tento prístroj je možné použiť len pre meranie ľudskej telesnej teploty orálnu, rektálnu alebo axílnu (v podpäzú). Nepoužívajte sa merat teplotu na iných miestach, ako napríklad v ústoch, pretože by to mohlo viesť k chybám výsledku merania a môže to spôsobiť zranenie.

- Nepoužívajte tento prístroj, ak si myslíte, že je poškodený alebo si na ňom všimnete niečo nevyčívané.
- Kvôli osobnej hygiene odporúčame pred prvým použitím prístroja odpiť si pokynov na čistenie.
- Vždy je nutné dožívať minimálny čas merania, kym sa neozve pripomienka!

- Vezmите na vedomie, že rôzne miesta merania môžu vyžadovať pokračovanie merania až po zaznení zvukového signálu, pozrite kapitolu "Metódy merania / Normálna telesná teplota".

- Z bezpečnostných dôvodov (riziko perforácie rektá) musí rektálne meranie u detí mladších ako 3 roky vykonávať iba školený zdravotnícy personál (profesionálny užívateľ). Použite preto inú metódę merania. Na meranie rektálnej teploty u malých detí mladších než 3 roky sú k dispozícii teplomery s pružnou špičkou.

- Nepoužívajte sa o rektálne meranie osobe s poruchami konečnika. Môže to prehodiť alebo zhoršiť chorobu.
- Zaistite, aby deli nepoužívali tento prístroj bez dozoru: niektoré časti sú príliš malé a deti by ich mohli pretrhnúť. Bude si vedomi rizika nehody v prípade, ak je prístroj dodávaný s káblami alebo hadicami.

- Nepoužívajte prístroj blízko silných elektromagnetických polí, ako sú mobilné telefóny alebo rádiové zariadenia. Dôždruйте minimálnu vzdialenosť 3,3 cm od týchto zariadení, ak používate prístroj.

- Výrobok chráňte pred pádnou a nárazmi!
- Výrobok nevystavte teplomu nad 60 °C. Teplomer NEVYVÁRAJTE!

- Ni čistenie prístroja používajte iba komerčne dezinfekčné prostriedky uvedené v časti "Čistenie a dezinfekcia", aby ste predišli poškodeniu prístroja.

- Odpôrúčame tento prístroj testovať na presnosť každé dva roky alebo po mechanickom náraze (napr. páde). Kontaktujte mestrov servis Microlife a požiadajte o výkonanie testu.

UPOZORNENIE: Výsledok merania daný týmto prístrojom nie je diagnóza! Nespoliehať sa len na výsledok merania.

- Batéria a elektronické prístroje sa musia likvidovať v súlade s mestne platnémi predpismi, nie s domácim odpadom.

- Pred použitím zariadenia si pozorne prečítajte návod.

Priľahlé časti typu BF.**Zapnutie teplomeru**

Teplomer zapnete stlačením tlačidla ON/OFF (1), krátke pinutie signalizuje, že je teplomer zapnutý. Prebehne test displeja. Všetky segmenty sa na displeji objavia symbolom «L». Ako je teplota okolia nižšia než 32 °C, na displeji (2) sa objavia «L» a blikájúce «C», teplomer je pripravený na použitie.

Funkčná skúšba

Správna funkcia teplomera je automaticky testovaná pri každom zapnutí. V prípade zistenia poruchy (nepresné meranie), sa na displeji objavia «ERR» a meranie nie je možné vykonáť. V tom prípade je nutné teplomer vymeniť.

Použitie teplomera

Teplomer zapnete stlačením tlačidla ON/OFF (1), krátke pinutie signalizuje, že je teplomer zapnutý. Prebehne test displeja. Všetky segmenty sa na displeji objavia symbolom «L». Ako je teplota okolia nižšia než 32 °C, na displeji (2) sa objavia «L» a blikájúce «C», teplomer je pripravený na použitie.

Čistenie a dezinfekcia

Vyberte si preferovanú metódou merania. Pri meraní sa nepretržite zobrazuje aktuálna teplota a blik symbol «C». Ak 10 krát zaznie zvukový signál a symbol «C» prestane blikat, znamená to, že zmeraný nárasť teploty je menej než 0,1 °C za 16 sekund.

Zivotnosť batérie predstavuje, ak teplomer vypnete krátkym stlačením tlačidla ON/OFF (1). Ak tlačidlo nestláčite, teplomer sa automaticky vypne prílišne po 10 minútach.

Uloženie nameraných hodnôt

Ako tlačidlo ON/OFF (1) pridržíte pri zapnutí stlačené dlhšie než 3 sekundy, automaticky sa zobrází najväčšia naposledy zmeraná teplota. Šúcsasne sa na displeji objavia symbolom «M». Približne 2 sekundy po uvoľnení tlačidla dlhšia teplota zmizne a teplomer je pripravený na meranie.

Metodé merania / Normálna telesná teplota

► V podpäzúnej jamke (axílnre) / 34,7 - 37,3 °C
 Utrrie podpäzúnu suchou utierku. Meraci senzor (4) umiestnite pod rameno do stredu podpäzú, tak aby sa hrot dotýkal pokožky a rameno pacienta priblížil k jeho telu. To záistí, že vzhľad v mestnosti nevypočíta meranie. Na to, aby sa v podpäzú dosiahla stabilná teplota, je potrebný dlhší čas, preto počkajte aspoň 5 minút, behom na zvukový signál.

► V ústach (oralne) / 35,5 - 37,5 °C
 10 minút pred meraním nejedzte ani nejite nič horúce alebo studené. Pred začiatkom merania máte byť usta zatvorené aspoň 2 minuty.

Teplomer zasúte do jednej z dvoch priehľbin pod jazykom, naľavo alebo napravo od koňca jazyka. Meraci snímač (4) musí mať dobrý kontakt s knivom. Zavrite ústa a rovnocenné dýchajte nosom, aby meranie nebolo ovplyvnené výdechným/vydýchným vzduchom. Ak to nie je možné z dôvodu zablokovávaných dýchacích ciest, mala by sa použiť iný metódou merania.

Prib. čas merania: 1 minúta!

V konenecku (rektaľne) / 36,6 - 38,0 °C

Uprozornenie: Na preventiu preverenie konečnika u detí (mladších ako 3 roky) odporúčame použiť inú metódou merania alebo použiť teplomer s pružnou špičkou.

Meraci snímač (4) opatrné zasúte 2 až 3 cm do análneho otvoru. Odporúčame použiť kryt sondy a lubrikant.

Ak si nie stie istou metódou merania, poradte sa s odborníkom, ktorý vás zaškôľa/zavíci.

Prib. čas merania: 1 minúta!

Čistenie a dezinfekcia

Na dezinfekciu v domácom prostredí použite tampoň so 70% izopropylalkoholom alebo navlhčenú kanínu navlhčenú 70% izopropylalkoholom, aby ste so snímacia teplomeru ulietli povrchy cenzučujúce látky (poznámka: dôždrujte návod na použitie a bezpečnostné pokyny

Vkllop termometra

Na vkllop termometra pritisnite gumb ON/OFF (vkllop/izkllop) (1); krátke zvočné signál, signálizá "termometer je vkllop". Izvede sa test zaslonu. Vsi segmenti zaslonu moraju byť prikazani.

Zatmen sa pri teplomeru okolice, nižší od 32 °C na zaslonu (2) izplňe «L» a utípiači «C». Termometer je zdaj pripravlený za uporabu.

Priezak delovania

Pravilno delovanie termometra sa testira samodejno ob všem vkllop. Če je ugotovljeno nepravilno delovanie (neratneno merjenje), se na zaslonu izplňe sporocilo «ERR» in merenie ne može. V takšom primeru je potreben termometer zameniti.

Uporaba termometra

Izberite želeni način merenia. Med meritvijo sa trenutna teplota píše stano v symbol «C» utípia. Če 10-krát zaslište písok v znak «C» ne vidiš več, potom je izmerjeno zvisanje teplotre v 16 sekundach. Potom po sa malá čuda sonda teplomera (pozri číslo (5) na obrázku) ponori do 70% izopropylalkoholu najmenšia na 5 minút (max. 24 hodín). Po vrátiť nechajte dezinfekčný prostriedok pred ďalším použitím 1 minútou sknúr. Vyvarujte sa ponorenju alebo utieraniu displeja, aby ste ho ochránil pred poskodením.

Teplomer nie je určený na profesionálne použitie.

Shranjevanje izmerených hodnôt

Če gumb ON/OFF (Vkllop/izkllop) (1) držite več kot 3 sekunde, ko vkllopje termometer, se na zaslonu píše maximálna teplota, ktorá je vtedy vlastnou teplotou. Ak chceste batériu vymeniť, odoberte z teplomera kryt priestoru pre batériu (3). Vložte novú batériu. Teplomer je pripravený na nový čas merania.

Načini merenia / Normalna telesna teplota

Pod padzúho (podpazúšo) / 34,7 - 37,3 °C

Podpäzod podľa súboru s říšou brásci. Merili senzor (4) postavte pod ruku v sredino zadu, tak aby sa konica dotika kožu v prostoru ne vplivila na odčítanie. Za aksislam merite je priproven minimálna čas merenia vsaj 5 minút, nelež na zvôničku signálu.

V ústich (oralno) / 35,5 - 37,5 °C

10 minút pred mereniem nejeho v nej ne viete čítať alebo hladine. Pred branjem usta nastojte zapniti druhim. Tako zagotovite, da zrak v prostoru je čist a vysušen. Že aksislam merite je priproven minimálna čas merenia vsaj 5 minút, nelež na zvôničku signálu.

Načini merenia / Normalna telesna teplota

Pod padzúho (padzúšo) / 34,7 - 37,3 °C

Podpäzod podľa súboru s říšou brásci. Merili senzor (4) postavte v ústach. Že aksislam merite je priproven minimálna čas merenia vsaj 5 minút, nelež na zvôničku signálu.

Načini merenia / Normalna telesna teplota

Pod padzúho (padzúšo) / 34,7 - 37,3 °C

Podpäzod podľa súboru s říšou brásci. Merili senzor (4) postavte v ústach. Že aksislam merite je priproven minimálna čas merenia vsaj 5 minút, nelež na zvôničku signálu.

Načini merenia / Normalna telesna teplota

Pod padzúho (padzúšo) / 34,7 - 37,3 °C

Podpäzod podľa súboru s říšou brásci. Merili senzor (4) postavte v ústach. Že aksislam merite je priproven minimálna čas merenia vsaj 5 minút, nelež na zvôničku signálu.

Načini merenia / Normalna telesna teplota

Pod padzúho (padzúšo) / 34,7 - 37,3 °C

Podpäzod podľa súboru s říšou brásci. Merili senzor (4) postavte v ústach. Že aksislam merite je priproven minimálna čas merenia vsaj 5 minút, nelež na zvôničku signálu.

Načini merenia / Normalna telesna teplota

Pod padzúho (padzúšo) / 34,7 - 37,3 °C

Podpäzod podľa súboru s říšou brásci. Merili senzor (4) postavte v ústach. Že aksislam merite je priproven minimálna čas merenia vsaj 5 minút, nelež na zvôničku signálu.

Načini merenia / Normalna telesna teplota

Pod padzúho (padzúšo) / 34,7 - 37,3 °C
