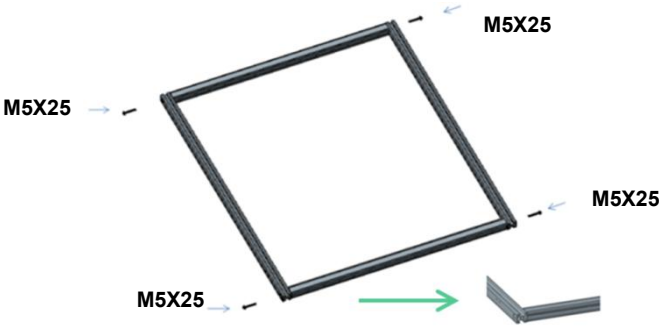
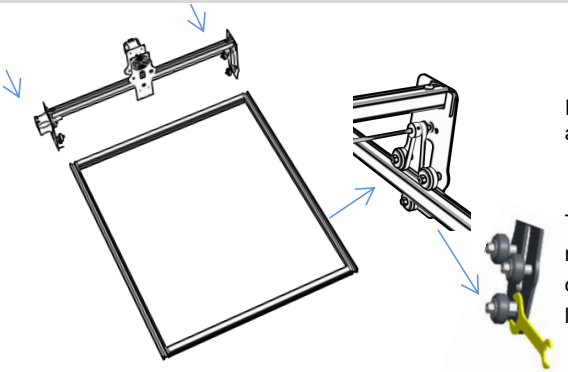
Part 4: Installation Steps

Step1: Assemble the frame



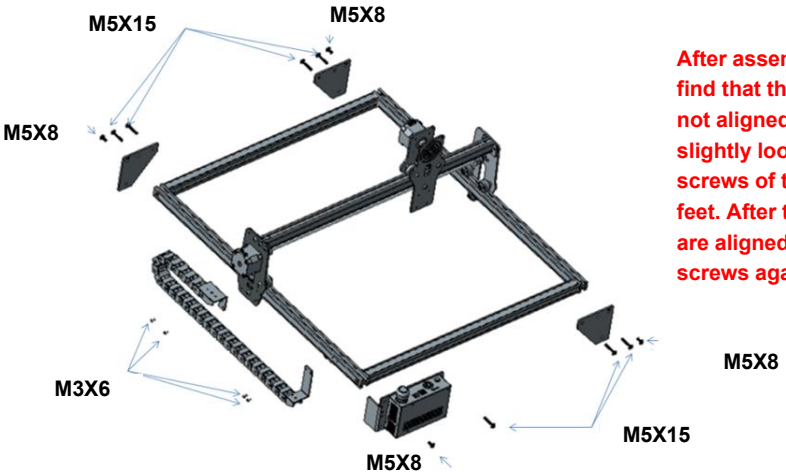
Step2: Install the X-axis assembly



If installation is difficult, adjust the offset wheel

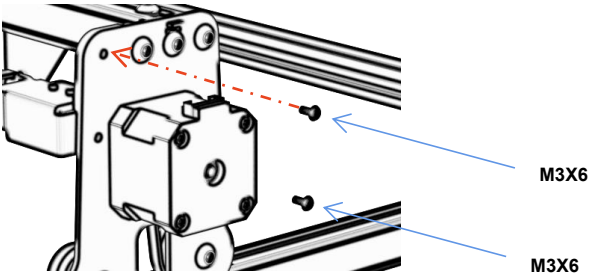
The guide rail passes through the middle of the 3 rollers. Loosen the distance between the upper and lower guide wheels appropriately.

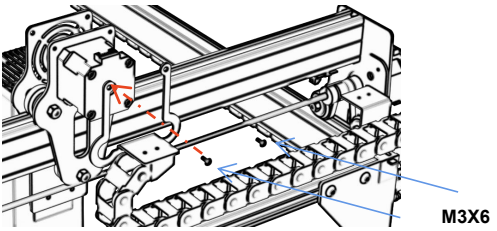
Step3: Install the support foot assembly and the Y-axis tank chain



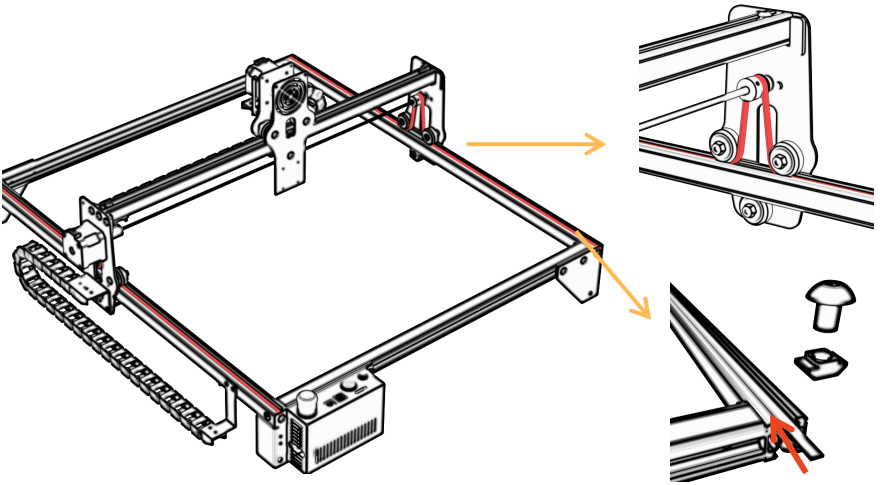
After assembly, if you find that the four feet are not aligned, please slightly loosen the screws of the support feet. After the four feet are aligned, tighten the screws again.

Step4: Install the X-axis tank chain



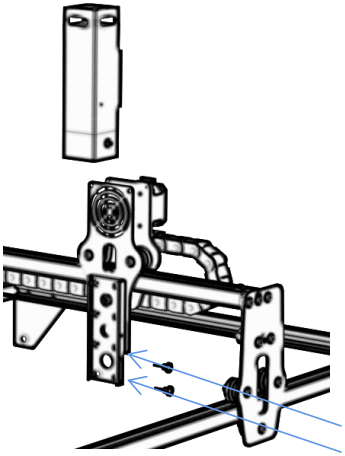


Step5: Install the timing belt



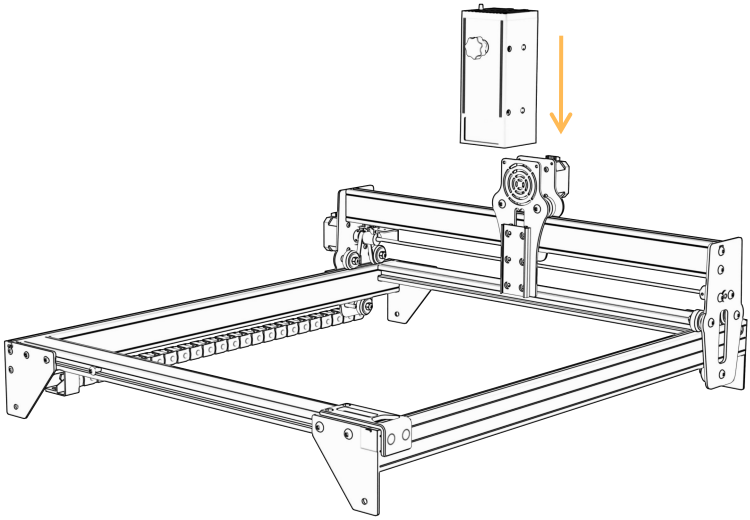
Using M5 × 6 T-shaped combination nut locking with belt

Step6.1: Step6: Laser installation (for 5W and 10W models)

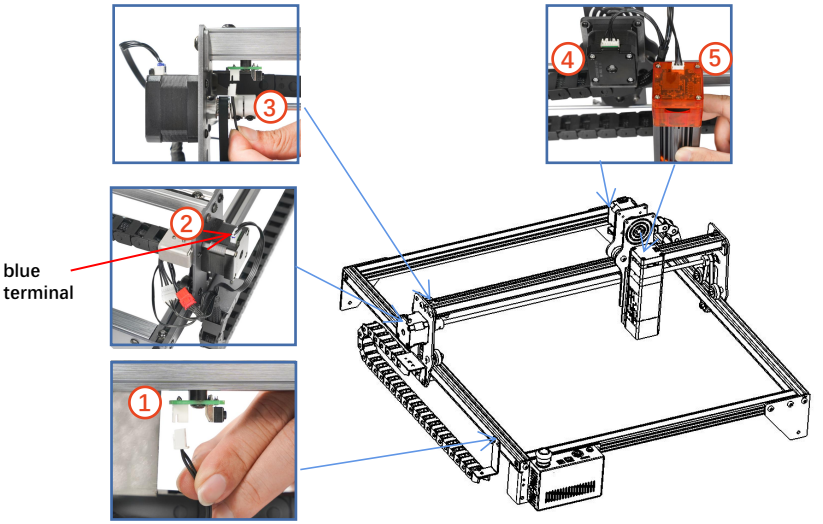


M4X12

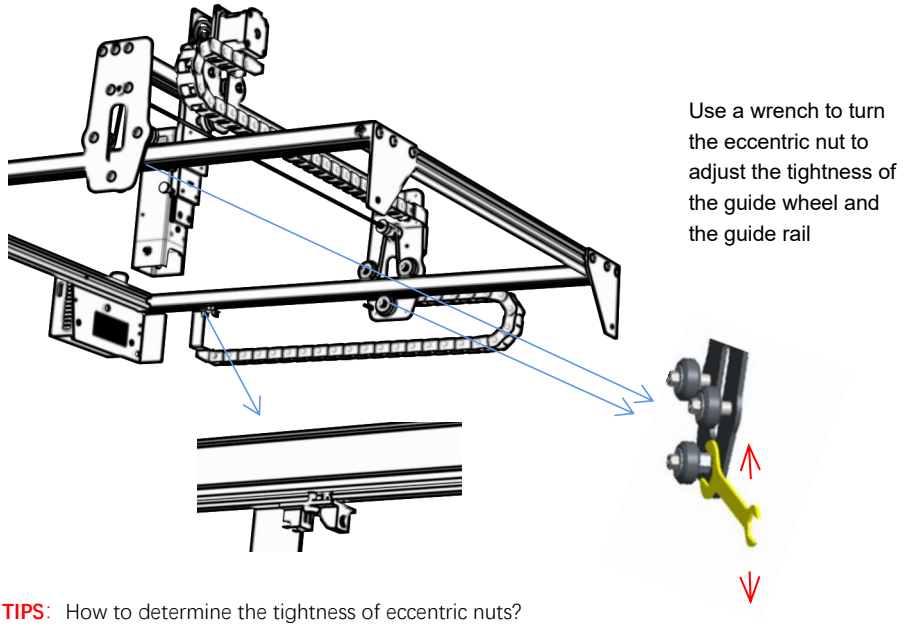
Step6.2: Mounting laser (for 20W))



Step7: Install the cable



Step8: Adjust the eccentric wheel



Use a wrench to turn the eccentric nut to adjust the tightness of the guide wheel and the guide rail

TIPS: How to determine the tightness of eccentric nuts?

Under the condition of ensuring that the bracket does not shake, you can lift one end of the machine to an angle of 45 degrees with the horizontal plane, and release the X-axis or Y-axis bracket from a high place. If the bracket can slide at a constant speed to the end, the tightness is suitable.
