

# MULTIPURE Bath & Garden

Multipure's Aquashower, Aquasplash, and Aquagrow use a specialized filter medium known as KDF (kinetic degrade fluxion), a composition that includes brass, copper, and zinc. It is an ideal shower and bath filter material because it is highly effective at reducing chlorine at the high temperatures found in showers and baths – a necessity because activated carbon is far less effective at high temperatures. KDF is denser than granular activated carbon (GAC), allowing for a high volume in the smaller space requirements of a shower and bath filter. Furthermore, KDF not only inhibits bacterial reproduction, but also tends to limit fungus and mildew buildup. In addition to KDF, Multipure's Aquashower, Aquasplash, and Aquagrow utilize crystalline quartz in their filter cartridges. This component acts as a water enhancer, allowing for better sudsing and lathering of soaps and shampoos, and improving the tactile sensation of the water.
