Cuffs constructed of vinyl are available on items listed above. Place a “V” after the connector type code to order.

Yellow vinyl cuffs are available in select sizes for isolation areas. Contact your Medline representative for more information.

Choosing the right size cuff for each patient ensures accurate readings and allows less room for error.

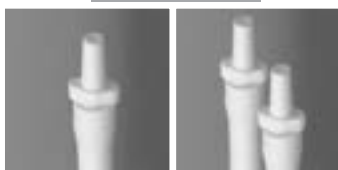

The chart below will help you determine the correct cuff size based on the patient's upper arm circumference. Please note that if you choose a cuff that is not the appropriate size, readings may not be accurate.

Blood Pressure Cuffs

Reusable blood pressure cuffs are an efficient and practical way to correctly fit every patient and every monitor. Long lasting coating and an accurate fit allows each patient to be easily and correctly monitored.

Caregiver Efficiency. A wide selection of connectors and eight different cuff sizes means having the right connector for each monitor and the proper cuff for every patient, saving time and enhancing patient care.

Long-Lasting Reusable Cuffs. The manufacturing process provides the necessary protection to allow multiple cleanings and to maintain the antimicrobial properties built-in to protect the blood pressure cuff fabric.*

*The antimicrobial properties do not protect users or others against bacteria, viruses, germs, or other disease organisms. Always clean and wash this product thoroughly before and after each use.

Safe & Comfortable. Soft material, rounded corners, finished edges and hook-and-loop closures for optimal patient comfort. Manufactured without latex or PVC/DEHP for added patient safety.

Practical. Each cuff is coated with a stain and fluid inhibitor for enhanced durability.

Simple Solutions. Significant Results.
