1,Connecting Process (AP MODE):

Here is a video that demonstrates the AP MODE connecting process (Please scan the QR code below)

IOS SCAN ME

Android SCAN ME

Step 1:Turn on your camera.

Step 2:In your phone "settings", go to "WLAN"settings and connect to the camera's WiFi signal (WiFi's name BG***/BH***/BK***), connect it even if it says "No Internet Connection".This means that you need to switch the WiFi connected to your phone to the WiFi signal of your camera. If you cannot find the WiFi signal for the camera in your phone's "WLAN" settings, please reset the camera(Turn ON the camera and Press and hold the "R"(or "M")key until the indicator light goes off).

Refer to the following pictures:

Step 3: Once your phone is connected to the camera's WiFi signal, open the"iWFCam" app,The camera will auto be added to the app and show "online". At this point, you will be able to view the camera's real-time video and control its settings.

IMPORTANT:
a,Make sure your phone within a range of 35 feet (10 meters) from the camera and stays connected to the camera's WiFi signal "BG*/BH***/BK***" ,even if it says "No Internet Connection".**
b,Make sure you give the app all necessary permissions (Very important)

## 2,Set up camera connection to the internet for remote view(IP MODE)

Here is a video that demonstrates the IP MODE connecting process (Please scan the QR code below)

Android SCAN ME

In AP mode with camera online(please refer to the AP MODE connecting process).

Click on the "Settings" icon in the bottom right corner and select "Device Settings",go to "WiFi Config",select your own router's WiFi name and enter the correct password, click "OK",then wait for the camera auto reboot, once it shows "online", This means that

you have successfully completed the camera networking settings,You
will be able to watch real-time views and control cameras anytime,
anywhere.Refer to the following pictures:

If the camera you purchased comes with the "sleep" function, After
the camera is successfully connected to the network, it will
automatically activate the sleep function when idle.Sleep mode can be
turned on/off in the app.After turning off sleep mode, it has all the
functions of a regular WiFi camera.

Note:The external network that you connected the camera to (phone hotspot/router's
WiFi) needs to be within 35ft (10m) from the camera.
Only 2.4G's WiFi is supported.And ensure that no special symbols appear in the
wifi name and password, as special symbols may not be read.

3. Set a password for the camera

You can add a password for the camera in the app. The default password for the camera is 8888. If you forget the password after changing it, please reset the camera and the camera will return to the default password 8888.

4. Regarding camera's "Motion detection alarm"function(if needed)

If the camera you purchased comes with the "sleep" function, you need to turn off the "sleep" mode to use "Motion detection alarm"function；

Once sleep is turned off, low-power performance can't be achieved；

If the camera you purchased comes with a PIR, it can receive human body sensing alarms without turning off sleep.

5.Troubleshooting:

<1>. If changing the network environment for use, please reset the camera first and then reconfigure WiFi;

<2>. If the camera does not recognize the memory card, please replace the memory card or format it before use;

<3>.If the camera you purchased comes with the "sleep" function, The sleep mode will only take effect when the camera is connected to the network, and the AP mode will not sleep.Sleep mode can be turned on/off in the app.

<4>. The camera will generate a certain amount of heat during operation, but it does not affect performance and can be used with confidence;

<5>. If an access password error is displayed: Please reset the camera to restore to the default password 8888;
