

Product parameters

Unit model M810

Remote model

Product size: 95mm high, 80mm long, and 80mm wide (approximate size)

The product includes: 1 Integrated horn, 2 remote controls, and 1 manual

Installation position: Install on the pillar in the middle of the battery or other fixed place

Product function: Simple vibration alarm, unable to lock doors, unable to flash lights

Sensitivity: adjusted on the remote control. Level 1-7, Level 1 is lowest, Level 7 is highest

Non destructive installation without affecting vehicle annual inspection and warranty

Sound: Approximately 120 decibels. 110 decibels higher than regular alarms

Distance: Approximately 30-80 meters between the remote control and the main unit

Sound quality: Single tone alarm for slight collision, 6-tone cyclic alarm for gravity collision, stop within 2 minutes

Power consumption issue: 20W power, low energy consumption due to discontinuous alarms, and low standby power consumption

The remote control cannot be merged with the original car remote control, as it will not vibrate or make a sound
