About This Release

This document provides release information on ZoneDirector release 10.1.2, including new features, enhancements, known issues, caveats, workarounds, upgrade details and interoperability information for version 10.1.2.

NOTE

By downloading this software and subsequently upgrading the ZoneDirector and/or the AP to version 10.1.2, please be advised that:

- The ZoneDirector will periodically connect to Ruckus and Ruckus will collect the ZoneDirector serial number, software version and build number. Ruckus will transmit a file back to the ZoneDirector and this will be used to display the current status of the ZoneDirector Support Contract.
- The AP may send a query to Ruckus containing the AP's serial number. The purpose is to enable your AP to autonomously connect with a wireless LAN controller operated by your choice of cloud service provider. Ruckus may transmit back to the AP, the Fully Qualified Domain Name (FQDN) or IP address of the controller that the AP will subsequently attempt to join.

Please be advised that this information may be transferred and stored outside of your country of residence where data protection standards may be different.

Enhancements and Resolved Issues

This section lists new features and enhancements that have been added in this release, and any customer-reported issues from previous releases that have been resolved in this release.

Enhancements and New Features

This section lists the new features and enhancements in this release.

New Access Points

- New Ruckus Access Point: R730

This release adds native support for the R730 dual-band 802.11ax indoor access point.

The R730 is the first Ruckus access point based on the 802.11ax standard, the next generation Wi-Fi standard supporting peak PHY rates up to 10 Gbps. The R730 features one 5 Gbps PoE+ (802.3at/at+) Ethernet port, one 1 Gbps non-PoE port, and a USB port for IoT applications.

Caveats, Limitations and Known Issues

This section lists the caveats, limitations and known issues in this release.

General

- Apple iOS and Mac clients fail to authenticate to an 802.1X WLAN when 802.11w MFP is enabled and set to Required. [ZF-19239]
- Windows laptops with Intel wireless cards do not show SSIDs of APs advertising 11ax capability in their scan report, and users therefore cannot connect to an 11ax capable AP.

Workaround: The latest Intel drivers address this issue, a driver upgrade is recommended.

NOTE

See the following URLs for Intel PROSet wireless drivers:

- Windows 10: <https://downloadcenter.intel.com/download/27750/Wireless-Intel-PROSet-Wireless-Software-and-Drivers-for-Windows-10?product=59485>

- Aeroscout RFID detection is not working properly on R730 APs. [ZF-19703]
- R730 ChannelFly background scanning stats displays incorrect values for total access time. [ZF-19305]

R730 Feature Limitations

The following R730 AP features are unsupported in this release:

- MU-MIMO
- ATF/BSSP
- OFDMA
- 160 Mhz change to 160/80+80 MHz BW on 5G radio
- MESH
- DVLAN
- Auto Cell Size
- Transient Client Management
- Airtime Decongestion
- LACP
- Onboard BLE/Zigbee is not supported
- TxBF
- Spectrum Analysis

R730 Power Modes

The R730 can be powered by 48V DC power, or 802.3at or 802.3at+ PoE (Power over Ethernet) switch or PoE injector. 802.3af PoE is *NOT* supported. Refer to the following table for power modes supported, and AP limitations when powered with sub-maximum power supply.

NOTE

The 5 Gbps PoE In port supports auto-negotiation with support for the following speeds: 100/1000/2500/5000 Mbps.

NOTE

The PoE switch port must run link layer discovery protocol (LLDP) power over Ethernet/MDI (PoE+) in order for the R730 to operate in full-power mode. This may require enabling both LLDP and Power via MDI (dot3) on the switch, if available.
