ONE CHOPPER - 3 FUNCTIONS

FOR MANIPULATING, DIVIDING AND
CRACKING MATURE CATARACTS

Nucleus Chopper
sharp edge for horizontal and vertical nucleus chopping techniques

Retractor
for mechanical retraction of iris and capsular rim

Nucleus Cracker
cleaver shaped tip

BIMANUAL TECHNIQUE

The two choppers are introduced through micro incisions separated by approximately 180°. The choppers retract the capsular rim so they can catch the equator and are brought together centrally to create a bisecting crack in the nucleus, dividing it cleanly in halves and quadrants. Further pieces can be divided by using it as secondary instrument in combination with the phaco tip.
