

TEMPLATE TO CHECK THE COMPATIBILITY OF YOUR BIKE WITH SPINY

Bicycles without derailleur cable in the seat tube.

Image 1

Image 2

To verify that Spiny is compatible with your bicycle, follow these instructions:

1. Print the Templates:

Make sure to print the templates at their original size (100% scale). Avoid any resizing or scaling adjustments in the print settings.

2. Cut Out the Templates:

Use scissors or a craft knife to carefully cut along the dotted line indicated on the template. This will allow you to use the cut-out section to check the fit on your bicycle.

3. Align the Templates:

Template **A1** should be positioned so that it touches both the bicycle tire and the frame tube. Then, you should be able to place template **C** by touching the frame tube with the numbered side and aligning one of the 6 positions with the two mounting lines on template **A1**, without interfering with the bicycle frame.

NOTE: You can use adhesive tape to help hold the templates in place during this process.

4. Check Compatibility:

If the templates fit well as shown in Diagram 2 and match the required dimensions, it is likely that your bicycle is compatible with Spiny.
