

Scale Beyond Gigabit with Adaptive Multi-Speed Networking

Engineered for modern multi-speed enterprise networks, NETGEAR's 5-Speed Multi-Gigabit switches intelligently adapt from 100Mbps to 10Gbps per port, delivering exact bandwidth each device needs.

With the demands of hybrid work, cloud services, AI-enhanced productivity tools, and high-definition video conferencing, modern networks need to extend beyond the 1-Gigabit barrier. The 10-Gigabit/

Multi-Gigabit Easy Smart Managed series from NETGEAR delivers on these evolving requirements, providing reliable 10-Gigabit/Multi-Gigabit bandwidth at an affordable cost.

Each port automatically detects which speed is needed by the connected device and provides the optimal performance. Unlike standard 10-Gigabit switches that only provide 1-Gigabit connectivity to devices requiring less than 10-Gigabit, the

XS512EM and XS724EM deliver the exact speed required with no downgrades. Additionally, these NETGEAR Multi-Gigabit switch ports support a range of existing cable types—Cat5e cables for speeds up to 5 Gbps and Cat6/Cat6A for full 10-Gigabit performance maximizing your current infrastructure investment while providing flexible upgrade paths.

Highlights

Hardware Highlights

- 5-speed Networking :
 - XS512EMv2: 10-port Multi-Gigabit + 2 dedicated SFP+
 - XS724EMv2: 24-port Multi-Gigabit + 4 dedicated SFP+
- Dedicated Fiber Uplinks: Pure SFP+ ports for high-speed backbone connections
- Rackmount or Desktop
- Active fans for whisper-quiet operation
- 0°C to 50°C tested performance

Software Highlights

- VLAN support for traffic segmentation
- Quality of Service (QoS) for traffic prioritization
- Auto "denial-of-service" (DoS) prevention
- Link Aggregation to add redundancy and increase your network speed (Static LAC and LACP supported)
- Loop prevention and broadcast storm controls
- IGMP snooping v1, v2 and v3 support for multicast optimization
- Rate limiting for better bandwidth allocation

- Port mirroring for network monitoring
- Jumbo frame support
- Energy Efficient Ethernet (IEEE802.3az) support for maximum power savings
- Troubleshoot connection issues via cable test

Industry leading warranty

- Limited Lifetime* 24/7 Technical Support
- Limited Lifetime* Hardware Warranty

10-Gigabit/Multi-Gigabit Ethernet Easy Smart Managed Switches

Features and Benefits

Hardware Features	Benefits
10-Gigabit/Multi-Gigabit support	Each copper interface supports 100M/1G/2.5G/5G/10G delivering the exact speed required to any device regardless of the cable that's been used.
Active Fans	Active fans engineered for modern open offices and collaborative workspaces, operating well below ambient background noise levels to maintain productivity.
10GBASE-X SFP+ ports	Providing flexibility to uplink to 10G-capable core or aggregation switches that support fiber links. Backward compatible to Gigabit fiber. Support copper or fiber modules.
Rackmount or desktop	Flexible deployment for either rackmount or desktop placement.
Software Features	Benefits
Port-based and 802.1Q-based VLANs	Segment network into smaller groups for more secure and efficient use of network resources.
Comprehensive QoS features: • Port-based or 802.1p-based prioritization • Layer 3-based (DSCP) prioritization • Port-based ingress and egress rate limiting	Advanced controls for optimized network performance and better delivery of mission-critical traffic such as voice and video. Ingress and egress rate limiting allows for bandwidth shaping for mitigating network resources constraints or for optimizing guest access bandwidth on the network.
IGMP Snooping	For improved network efficiency on delivering multicast traffic. Save cost and improve network efficiency by ensuring multicast traffic only reaches designated receivers without the need of an extra multicast router.
Link Aggregation (Static LAG and LACP)	Build up bigger bandwidth to support aggregated uplink/downlink traffic or to provide redundant link(s) using Static Manual LAGs or LACP.
Voice VLAN	The feature enables automatic assignment of voice traffic (based on OUI) to a special VLAN (AKA Voice VLAN), allowing the assignment of special QoS parameters to that traffic for high priority services. Ports must be MANUALLY configured as members of the Voice VLAN before the automatic OUI-based voice traffic assignment.
Loop detection and auto DoS prevention	Detect accidental network loops and protect against DoS attacks.
Port Mirroring	For better and quicker network diagnostics and troubleshooting.
Energy Efficient Ethernet (IEEE 802.3az)	For maximum power savings and reduced energy costs.
Cable Test	Easily identify bad Ethernet cables.

Example Application

XS512EM/XS724EM in a Business Environment

Cables and Speeds

The following table describes the network cables that you can use for the switch connections and the speeds that the cables can support, up to 100 meters (328 feet).

SPEED	CABLE TYPE
100 Mbps	Category 5 (Cat 5) or higher rated
1 Gbps, 2.5 Gbps, or 5 Gbps	Category 5e (Cat 5e) or higher rated
10 Gbps	Category 6A (Cat 6A) or higher rated

Why the NETGEAR 10-Gig/Multi-Gig Switches are ideal for SMB?

1. 5-speed Networking Expand your network instantly and give your devices either 100Mb, 1, 2.5, 5 or 10-Gigabit automatically.
2. Security to protect the SMB networks for possible threats thanks to Auto DoS and Storm Control.
3. Visibility to identify any possible cable issues or abnormal traffic behavior with cable health test and port statistics.
4. Enhanced Control to improve your network performance with VLAN, QoS and Multicast Support.
5. Reliability to assure that the SMB networks are up and running we introduced Link Aggregation and Loop Prevention to minimize possible downtimes.
6. Future-Proofing to prepare your network for growth with dedicated SFP+ uplinks for high-speed backbone connections.
