## USER'S MANUAL TABLE OF CONTENTS

### 1.0 FEATURES

- Designed for UC300ETH motion controller.
- 3 Expansion Ports. It has 3 x IDC26 connector for adding Breakout or Relay Boards.
- Built-in PWM-Based Speed Control and Two Built-in Electromechanical Relays with NO and NC positions for spindle control.
- The system monitors:
  - E-Stop
  - Safety Charge Pump.
  - VFD Fault.
  - Driver Fault.
- Outputs can be 500mA open collector or +5vdc at 50mA TTL.
- Electromechanical Relay with NO and NC positions for general purpose (Port\_2 16 or 17, jumper-selectable).
- Microcontroller based SCHP.
- Optoisolated inputs working at 5-24VDC.
- Can be powered with a voltage between +10 and +30VDC.
- Status LEDs on all input and Output connections.
- DIN Rail mountable.
- Pluggable Screw-On Terminals.
- It is compatible with family of C34 connector boards that allow quickly connecting to popular drives connecting not just the step and direction signals, but also the fault and enable signals.
- High speed input \*New

## 2.0 I/O SPECIFICATIONS

Inputs and Outputs are jumper selected to be TTL or Open collector.

PINS	PORT1	PORT2	PORT3	PORT4	PORT5	TOTAL
INPUT	5	13	13	5	13	49
OUTPUT	12	4	4	12	4	36
TOTAL	17	17	17	17	17	93

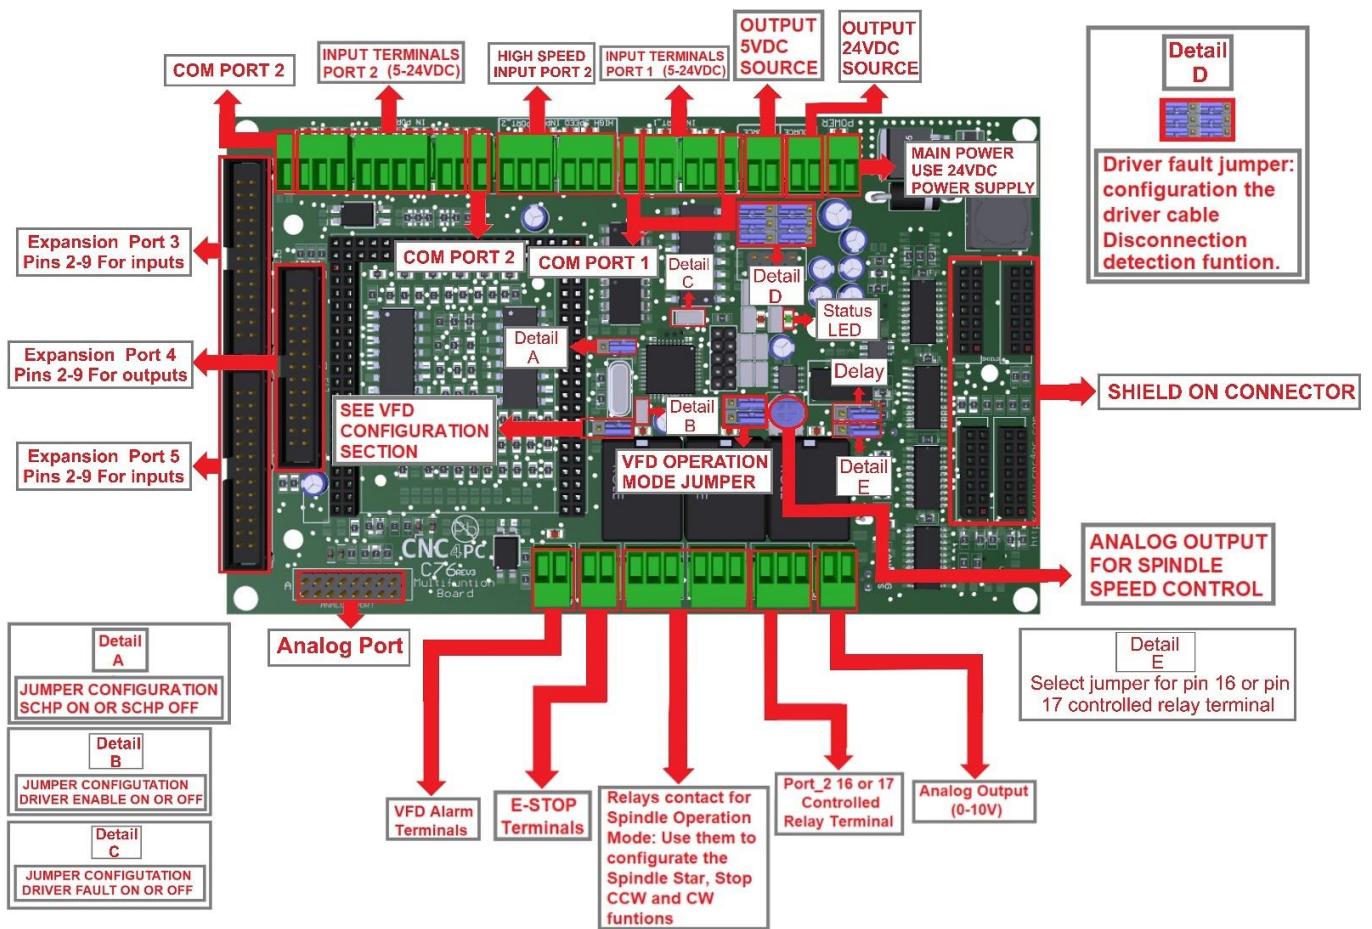

OPTOISOLATED DIGITAL INPUT TTL SPECIFICATIONS	
<b>On-state voltage range</b>	5 to 24VDC
<b>Maximum off-state voltage</b>	0.8V
<b>Typical signal delay</b>	2.8uS

DIGITAL OUTPUT TTL SPECIFICATIONS	
<b>Maximum output voltage</b>	5VDC
<b>Maximum output current</b>	24mA
<b>Maximum off-state voltage</b>	0.44 V
<b>Maximum supported frequency</b>	400KHz
<b>Typical signal delay</b>	10nS
<b>Time of transition to high impedance state</b>	12nS

OPEN COLLECTOR OUTPUT SPECIFICATIONS	
<b>Number of outputs</b>	4
<b>Maximum Supported output voltage</b>	50VDC
<b>Typical output current (general purpose pins)</b>	500mA
<b>Maximum supported frequency</b>	250KHz
<b>Typical signal delay</b>	Less than 8nS

ENCODER INPUT	
<b>On-state voltage</b>	5 VDC
<b>Maximum off-state voltage</b>	0.8V
<b>Typical signal delay</b>	2.8uS
<b>Rise / Fall Time (Typ)</b>	50ns - 12ns

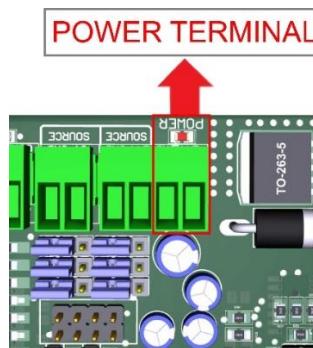

### 3.0 BOARD DESCRIPTION

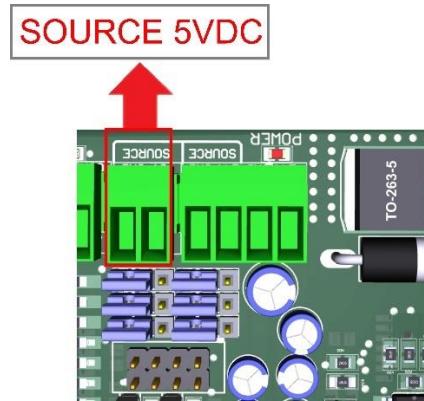

### 4.0 POWER TERMINALS AND CONFIGURATION JUMPERS

#### 4.1 Power terminal

The board requires an external power supply which can deliver 10-30VDC@700mA to power the logic of the board and the UC300, but keep in mind that each output can deliver up to 500mA and if powering other breakout or relays boards. So, you will need to add all the expected power consumption.

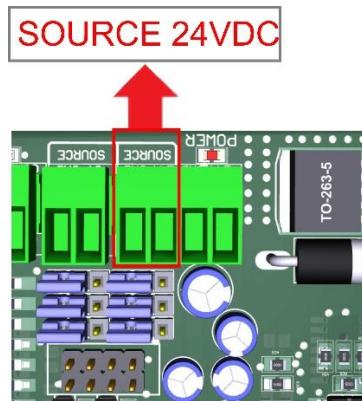

## 4.2 Source Output 5VDC

## 4.3 Source Output 10-30VDC

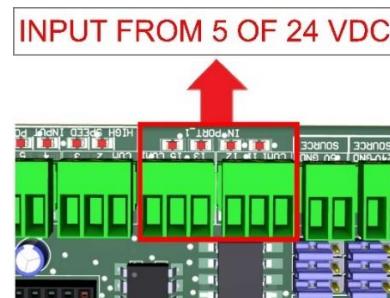

10-30VDC can be sourced to sensors or other cards requiring it.

## 4.4 Input terminals for port\_1 and port\_2

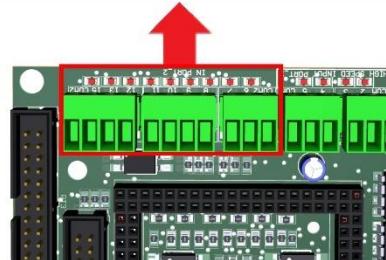

These terminals support signals 10-24VDC, you can connect sensors NPN, PNP, switches, capacitive sensors, etc. set jumpers depending on signal voltage.

**PORT\_1**

## PORT\_2

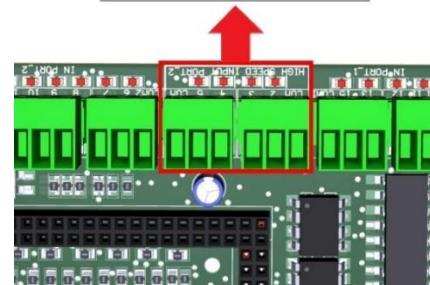

INPUT FROM 5 OF 24 VDC

## HHIGH SPEED IINPUT PORT\_2 PIN 2, 3, 4 AND 5

These terminals support signals 5VDC

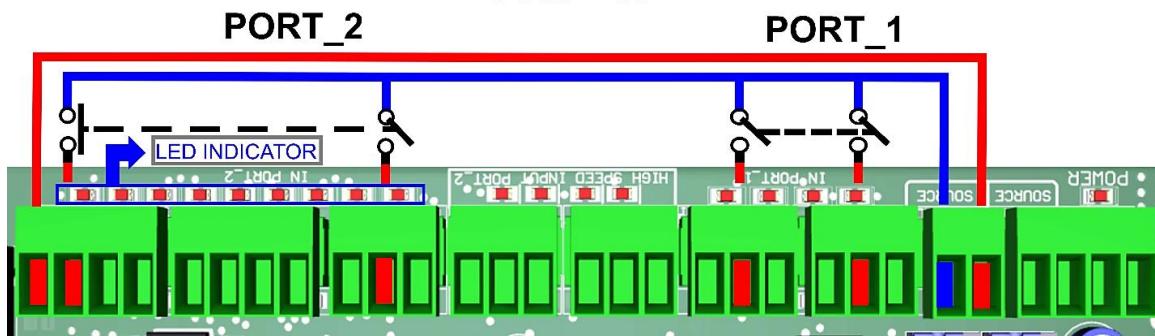

INPUT 5VDC

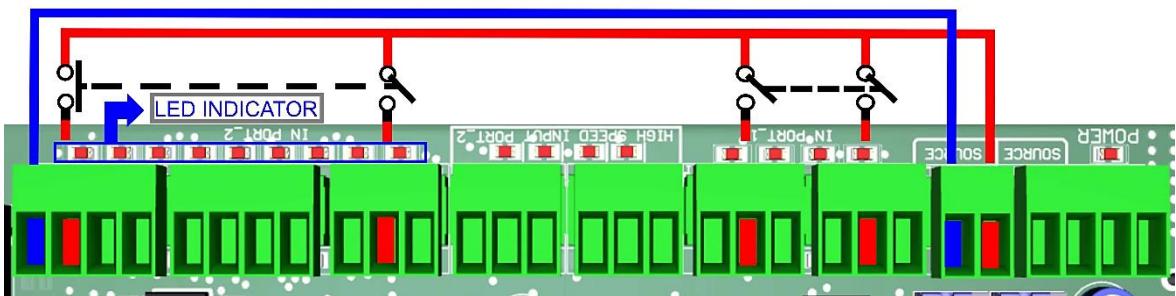

## 4.5 Select inputs of port\_1 and port\_2

Set COM = +5VDC, GND or 10-24VDC to determine the common for the input signals to be used.

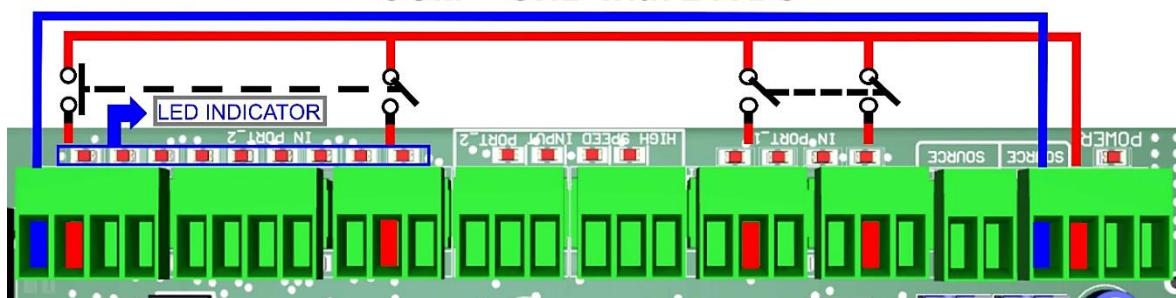

COM = 5V

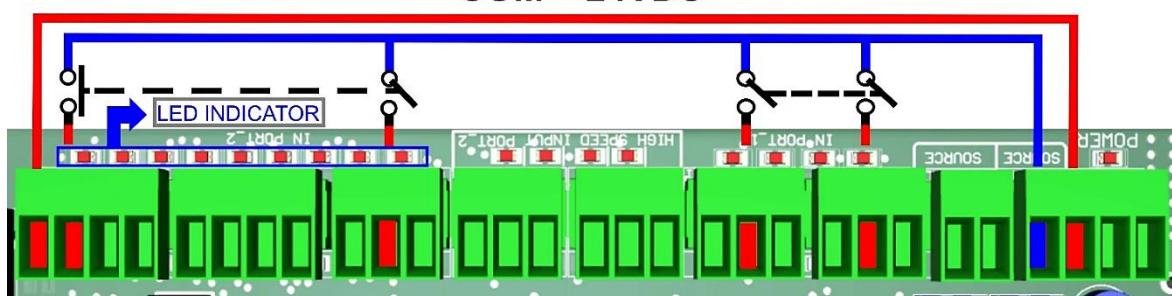

**COM = GND with 5VDC**

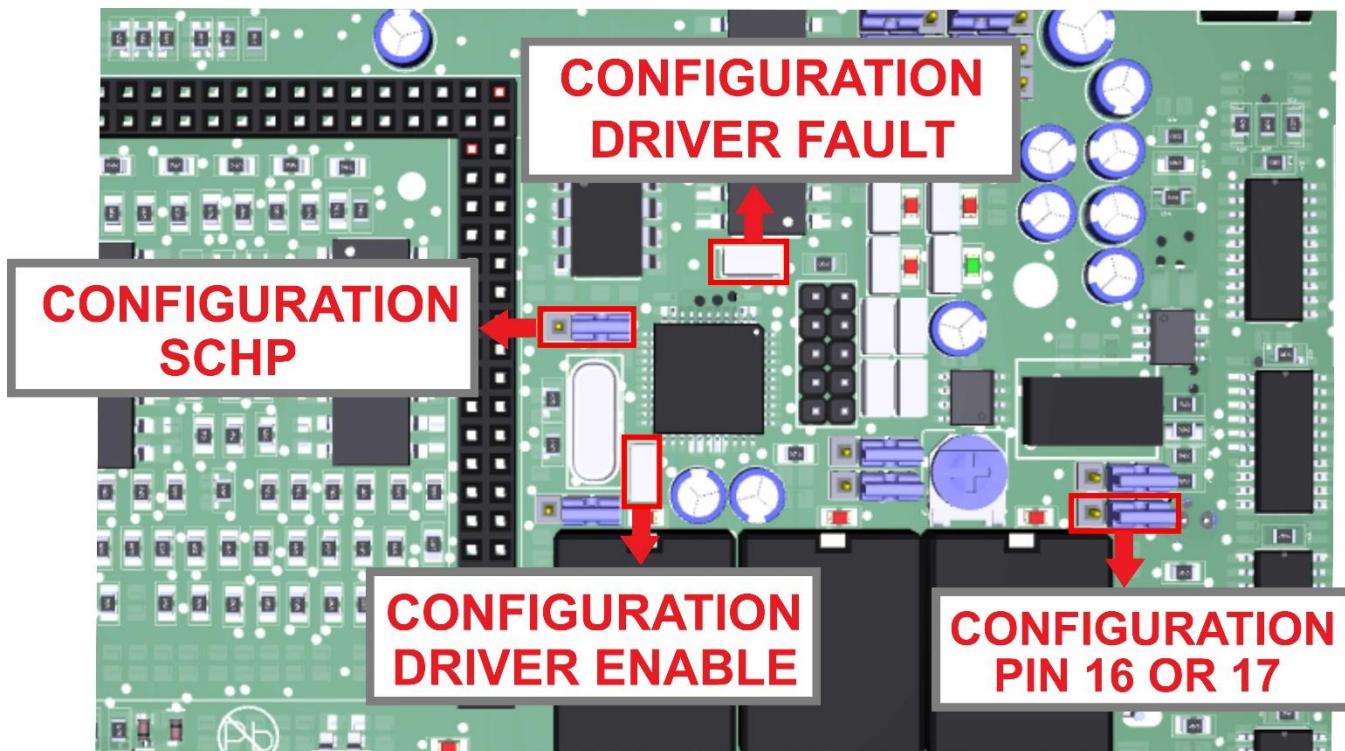

**COM = GND with 24VDC**

**COM = 24VDC**

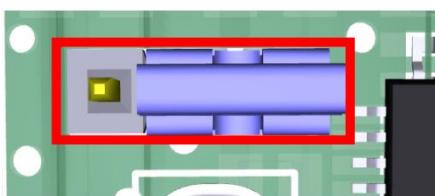

## 5.0 JUMPER POSITION

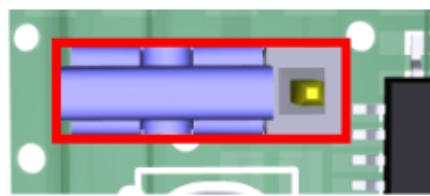

### 5.1 Selecting the SCHP operation mode

The Safety Charge Pump uses pin 17 on port 2. When the SCHP is enabled on the board, then the output of the terminals will be active while the Safety Charge Pump signal is present and inactive while the SCHP is not present.

**1-2: SCHP ON**

**2-3: SCHP OFF**

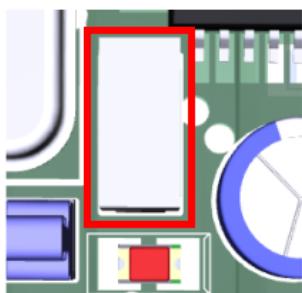

Note: also, that Relay3 on can also be tied to pin 17 or 16 on port 2. If the jumper is set to be tied to pin 17, then the relay will activate while the system is active. This can be ideal to control power to DC servos or to handle servo brakes. Or enable/disable any other feature that is associated to the system been active.

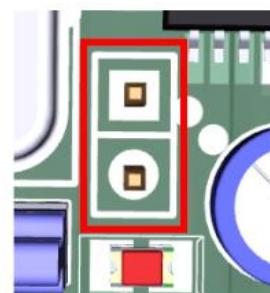

## **5.2 Jumper configuration driver enable**

When you need to use the Driver enable to ON put the jumper, if you need it OFF remove the jumper

**1-2: Driver enable ON**

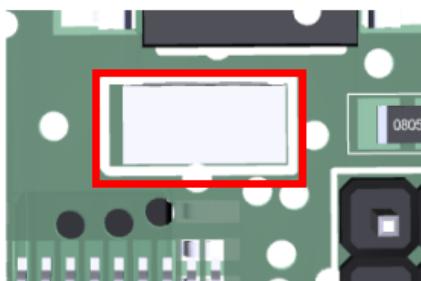

**2-3: Driver enable OFF**

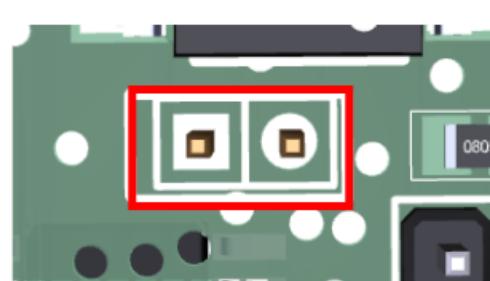

## **5.3 Jumper configuration driver fault**

When you need to use Driver Fault to ON set the jumper, if you need to OFF remove the jumper.

**1-2: Driver fault ON**

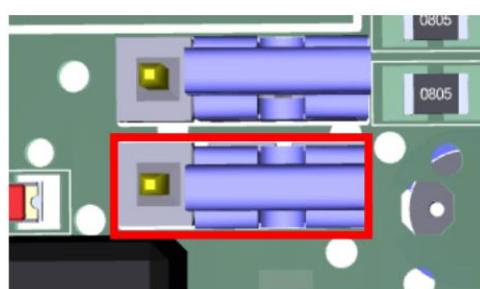

**2-3: Driver fault OFF**

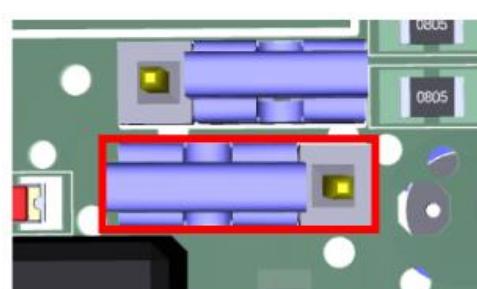

## **5.4 Configuration jumper pin 16 or 17**

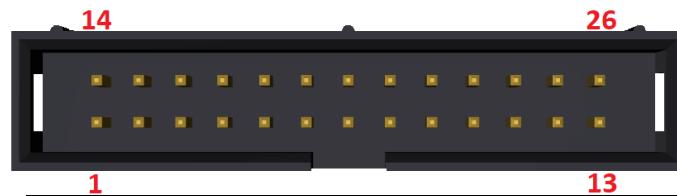

**1-2: PIN16**

**2-3: PIN17**

## 6.0 LPT\_3 AND LPT 5 INPUT EXPANSION PORT

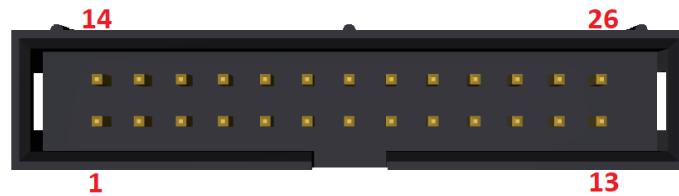

LPT 3/LPT 5	
Equivalent P.P. Pin	UC300 Function
P_1	OUTPUT
P_2	INPUT
P_3	INPUT
P_4	INPUT
P_5	INPUT
P_6	INPUT
P_7	INPUT
P_8	INPUT
P_9	INPUT
P_10	INPUT
P_11	INPUT
P_12	INPUT
P_13	INPUT
P_14	OUTPUT
P_15	INPUT
P_16	OUTPUT
P_17	OUTPUT
P_18	ENABLE

### NOTE:

Output pin 18 can be used to enable expansion boards

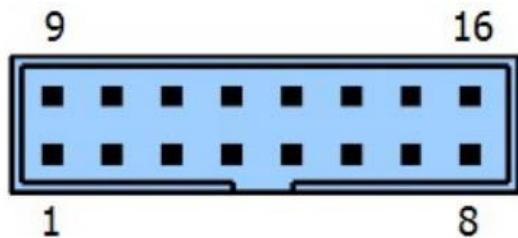

## 7.0 LPT\_4 OUTPUT EXPANSION PORT

LPT 4	
Equivalent P.P. Pin	UC300 Function
P4_1	OUTPUT
P4_2	OUTPUT
P4_3	OUTPUT
P4_4	OUTPUT
P4_5	OUTPUT
P4_6	OUTPUT
P4_7	OUTPUT
P4_8	OUTPUT
P4_9	OUTPUT
P4_10	INPUT
P4_11	INPUT
P4_12	INPUT
P4_13	INPUT
P4_14	OUTPUT
P4_15	INPUT
P4_16	OUTPUT
P4_17	OUTPUT
P4_18	ENABLE

## 8.0 ANALOG I/O PORT PINOUT.

The analog port contains 2 analog inputs and 2 analog outputs. This port also contains a 5Volts power output.

Pin	Signal direction
1	5 Volt output
2	Ground
3	Analog input 1.
4	Analog input 2.
5	Ground
6	Analog output 1.
7	Analog output 2.
8	5 Volt output
9	5 Volt output
10	Ground
11	Analog input 1.
12	Analog input 2.
13	Ground
14	Analog output 1.
15	Analog output 2.
16	5 Volt output

**NOTE:**

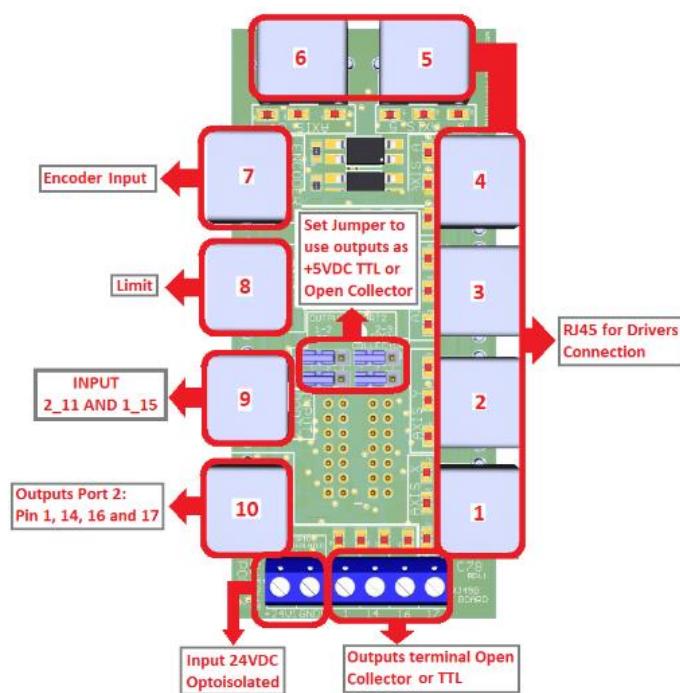

Analog I/Os are not isolated.

## 9.0 CONNECTION EXAMPLE FOR SHIELD C78

### 9.1 RJ45 shield C78 connection for axes, Limits and Encoder

### 9.2 RJ45 shield board description

### 9.3 Pinout

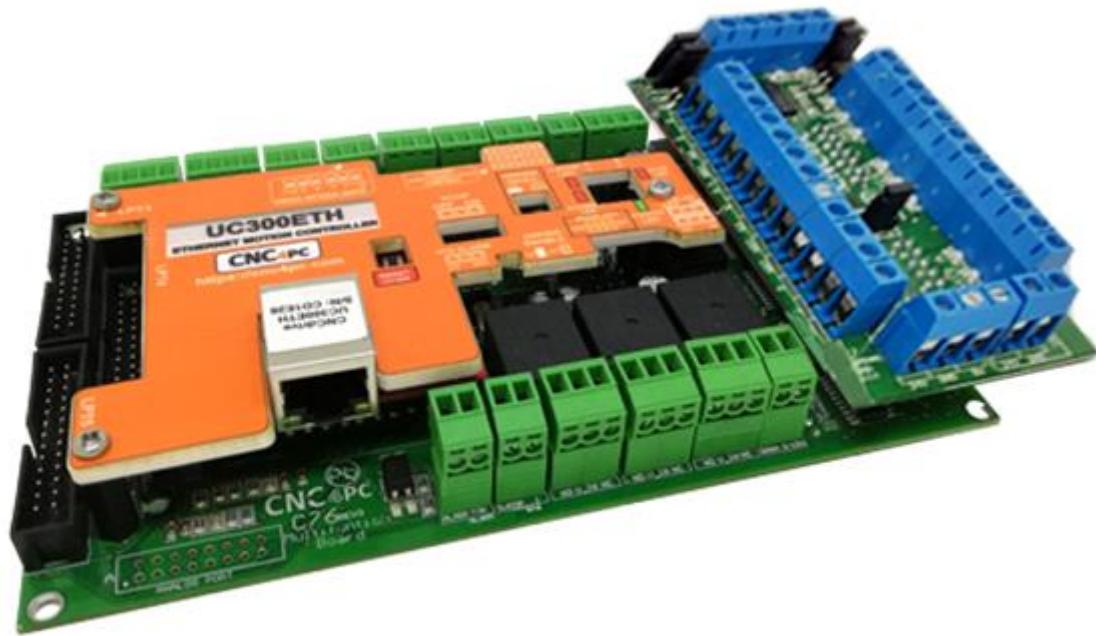

*RJ45 Distribution*

RJ45_1		RJ45_2		RJ45_3		RJ45_4		RJ45_5		RJ45_6	
RJ45 PIN	P.P. PIN										
1	NC										
2	1_2(Step X)	2	1_4(Step Y)	2	1_6(Step Z)	2	1_8(Step A)	2	1_1(Step 5)	2	1_14(Step 6)
3	NC										
4	GND										
5	Error/res X	5	Error/res Y	5	Error/res Z	5	Error/res A	5	Error/res 5	5	Error/res 6
6	1_3(Dir X)	6	1_5(Dir Y)	6	1_7(Dir Z)	6	1_9(Dir A)	6	1_17(Dir 5)	6	1_16(Dir 6)
7	12/24VDC										
8	5VDC										

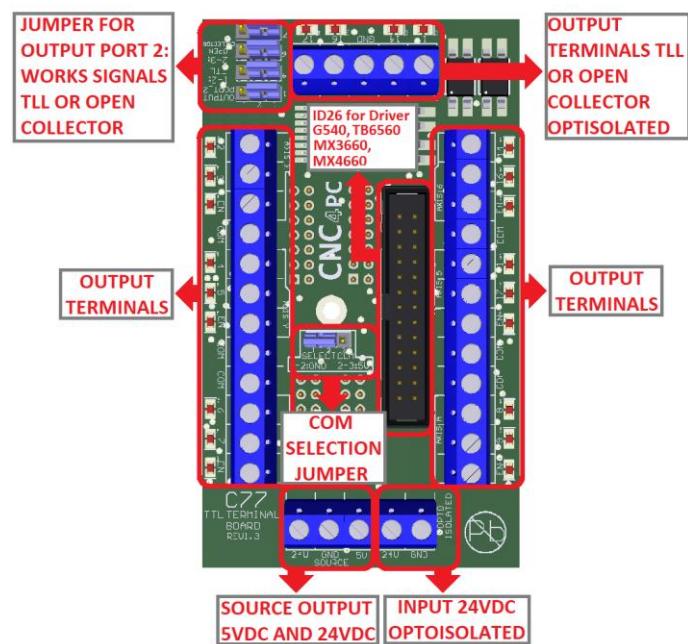

RJ45_7		RJ45_8		RJ45_9		RJ45_10	
RJ45 PIN	P.P. PIN	RJ45 PIN	P.P. PIN	RJ45 PIN	P.P. PIN	RJ45 PIN	P.P. PIN
1	GND	1	GND	1	GND	1	GND
2	5VDC	2	1_13	2	NC	2	2_17
3	NC	3	1_12	3	NC	3	2_16
4	2_4(INDEX)	4	1_11	4	2_11	4	2_1
5	NC	5	1_15	5	1_15	5	2_14
6	2_2(enc. A)	6	2_11	6	NC	6	NC
7	NC	7	12/24VDC	7	12/24VDC	7	5VDC
8	2_3(enc. B)	8	NC	8	NC	8	12/24VDC

## 10.0 CONNECTION EXAMPLE FOR SHIELD C77

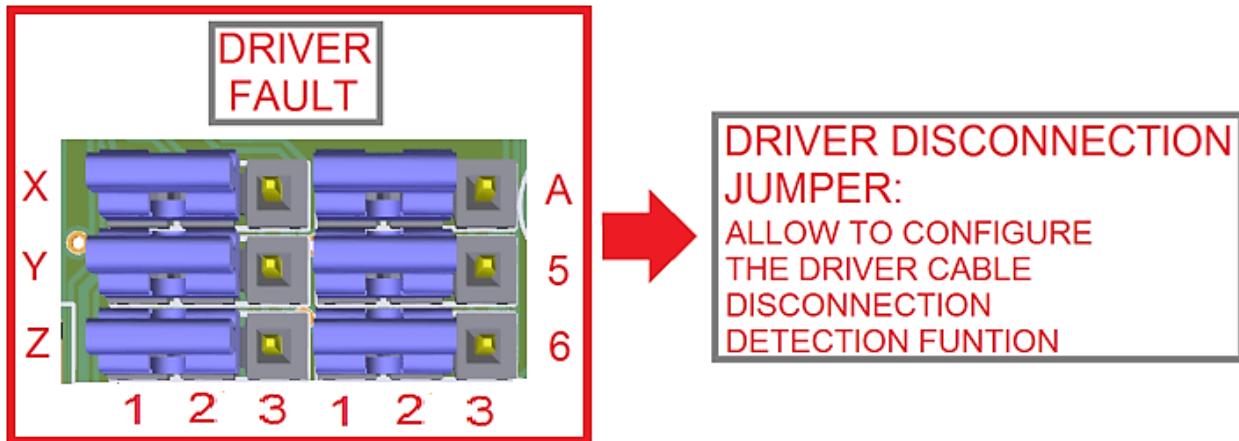

### 10.1 Terminal Shield Screw-on

### 10.2 Shield board description

## 11.0 DRIVER DISCONNECTION JUMPERS

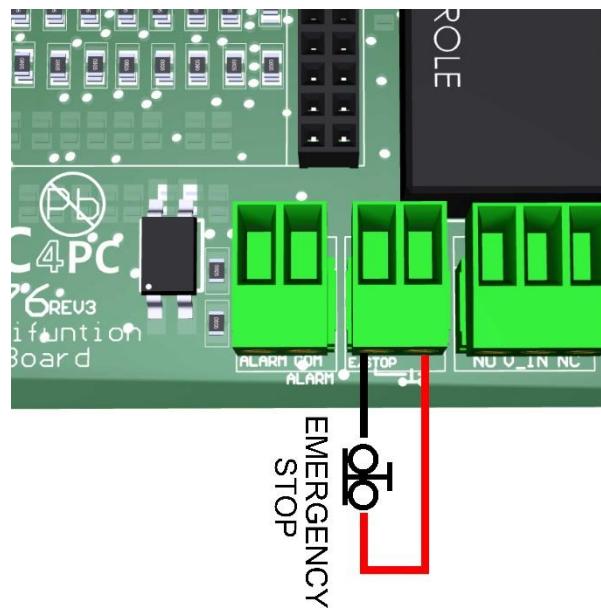

Note: 1-2: Cable disconnection detection.

2-3: No cable disconnection detection.

This configures how cable disconnect is to work. Set according to C34 board manual.

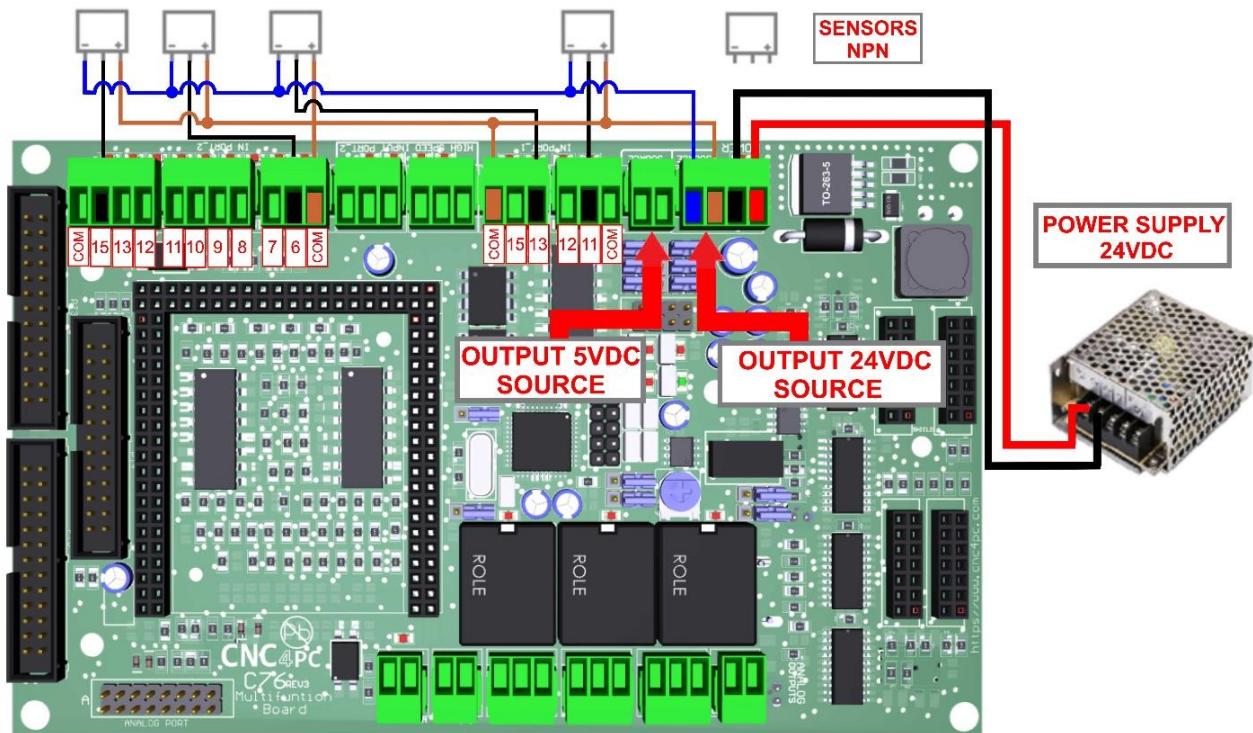

## 12.0 E-STOP TERMINAL

Connect an E-STOP push button as is shown in the below images.

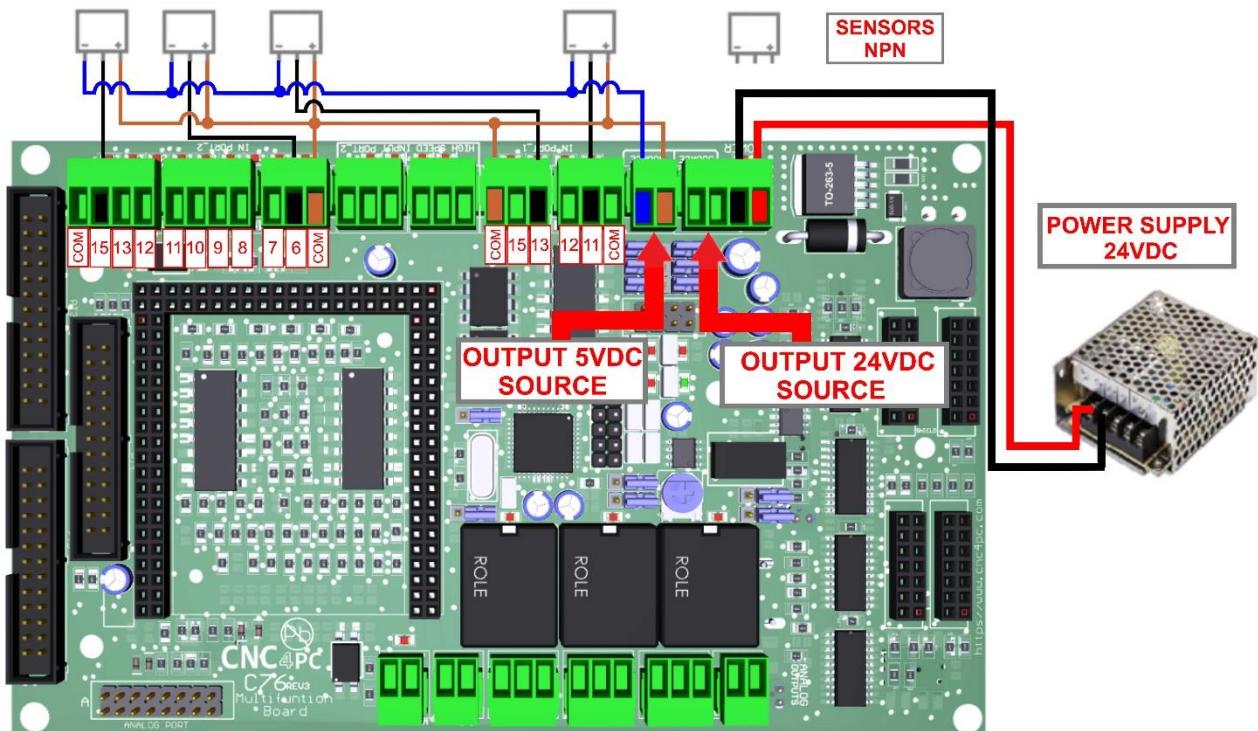

Pin 10 port 1 is used for E-Stop. Since this board controls the enable line, and the enable line is the one responsible for notifying the controller of the e-stop condition, the user does not have a direct access to the pin itself, just to the e-stop terminal on the board. The E-Stop terminal is tied to the enable line and will trigger the e-stop. A fault or E-Stop triggers a low for 5 seconds to notify the controller of the fault condition, then resets to high again.

## 13.0 TYPICAL CONNECTIONS

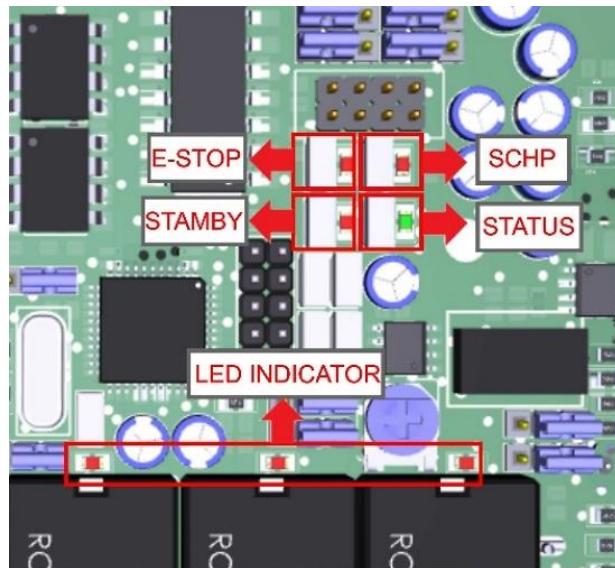

-Connection with the terminal of output source of 5VDC

## 14.0 LED INDICATOR

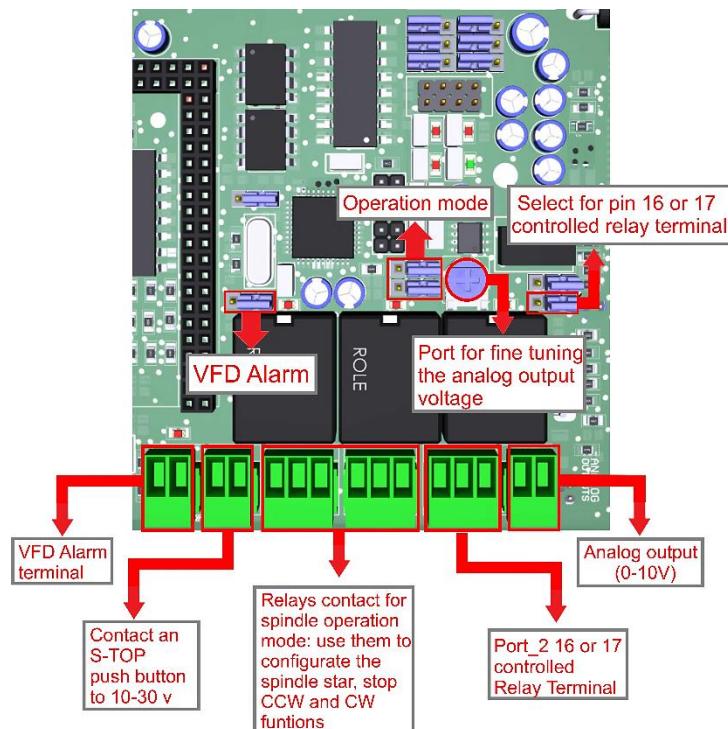

The **standby LED** lights indicate that the system is ready but disabled. When **Status LED**, (Green LED) lights, it indicates that the system is enabled.

There are 4 possible error sources: a driver fault, E-STOP error, SCHP error or VFD alarm. A LED will light close to the source of the fault.

### VFD Connection and configuration jumper

The VFD Alarm monitoring feature can be enabled or disabled:

**The VFD Alarm will trigger when the contacts are open and the VFD Alarm is enabled.**

For the Variable speed control go to
