

FERMAX DSV-01/XS 1/W Veo Wifi Duox Plus Cityline Video Entry Kit

Description

The Fermax 94411 is a complete video door entry system designed for single-family residences, combining advanced digital communication with streamlined installation. At the core of the kit is the Duox Plus technology, a fully digital, non-polarised two-wire system that simplifies wiring while delivering robust performance. This system supports both audio and video transmission over the same pair of wires, reducing installation time and complexity. The kit includes a Cityline flush-mounted outdoor panel along with a high-resolution camera and a call button integrated into a vandal-resistant aluminium front.

The interior component of the kit is the Veo Wi-Fi hands-free monitor, a sleek, wall-mounted unit with a 4.3" colour screen that provides crystal-clear video and intuitive touch navigation. It's integrated Wi-Fi capability allows seamless connectivity to the Fermax Blue app, enabling users to receive calls, view video feeds, and open doors remotely from their smartphones or tablets. This enhances both convenience and security, giving homeowners remote access control and real-time communication with visitors, even when away from home.

Additional features of the F94411 kit include customizable call tones, automatic picture capture during calls, and adjustable screen settings for brightness, contrast, and volume. The system is also scalable, allowing future expansion to include additional monitors or entrance panels. The kit's components are engineered for long-term reliability, featuring low power consumption, minimal maintenance requirements, and compatibility with Fermax's wider range of Duox accessories.

Works With An App

Wireless Data Connection

Features

- Duox Plus 2 non-polarised wire installation
