Installing the Rizer to the adjustable base

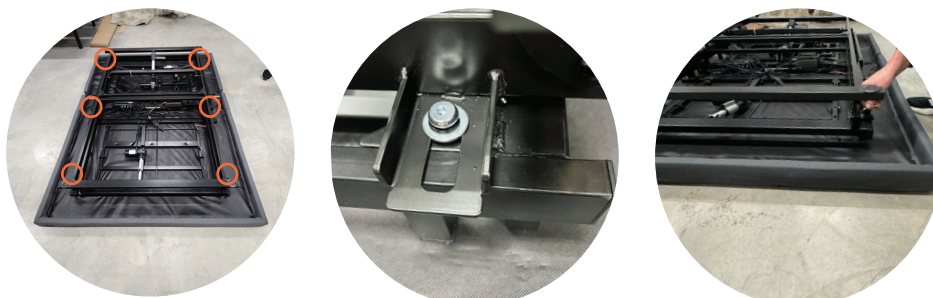

NOTE: If setting up your adjustable base for the 1st time, follow the instruction manual for assembly. Do not attach the legs to the adjustable base. If you are adding the Rizer to your current Remedy III or Contempo IV, remove the motion sensors and legs prior to attaching to the Rizer.

- 1 Starting with the adjustable base inverted (with the underside facing upward), Lift and flip the Rizer onto the base.

NOTE: The lift motor for the Rizer should be towards the head of the adjustable base.

- 2 Attach the Rizer to the base using the bolts, lock washers and washers. Do not tighten until all 6 bolts have been started.

- 3 Thread the legs into the Rizer.

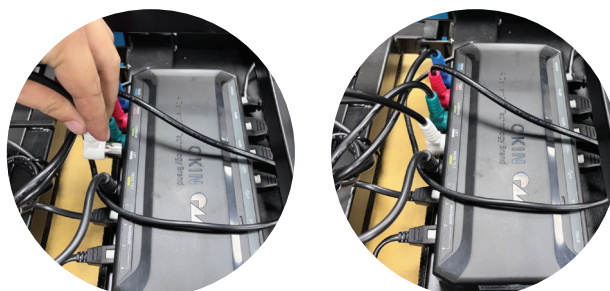

There are 2 recommended leg height options to use. Use the 8" legs by themselves for an overall height of 17.25" from the floor to the top of base. Use the 3" and 2" legs combined for an overall height of 14.25" from the floor to the top of the base.

NOTE: It is NOT recommended to use any other height options.

Installing the Rizer to the adjustable base

- 4 **FOR TXL - QUEEN SIZE:** Insert the white cable (TXL-Queen) from the Rizer into the corresponding lift port opening on the control box of the adjustable base.

FOR KING / CAL-KING SIZE: Insert the black Y-cable from the Rizer into the corresponding lift port opening on the control box of the adjustable base.

- 5 Attach the motion sensors onto the center legs so they face the outside of the Rizer and tighten strap to secure.

NOTE: The motion sensor light cable is connected to the control box. Allow enough cable length for the Rizer to function accordingly. You may cut the zip tie to extend the cable length. The sensor light must face outward so it can detect movement and light up when people walk by. The sensors light up automatically in a dim environment.

Your Rizer on your adjustable base is now ready to use!
