## Chapter 7 Remote Access via Web Client

Use the Web Client to remotely access your WIRELESS NVR at any time via a PC. Before you access the Web Client, you need to ensure that the network settings of the WIRELESS NVR are configured properly. The most convenient and easiest way is if you have set the WIRELESS NVR to a static IP address (please see [“5.5.1 Network”](#)). This means you’ll only need to open the web browser on your PC and type in the static IP address you have set on the WIRELESS NVR.

However, if the IP address of the WIRELESS NVR is assigned by a DHCP server (see [“5.5.1 Network”](#)), then it means that each time you reboot the WIRELESS NVR, the IP address changes. In this case, ask if your ISP can provide you a static IP address. If not, then configure the DDNS service. See the network settings in [“5.5.4 DDNS”](#).

### System Environment Requirements

The minimum requirements for hardware and OS required to run Web Client are given as below.
