

Create reality, achieve dreams

Ender-5 S1

Ender-5 S1

3D Printer User Manual

V1.3

To Our Dear Users

Thank you for choosing Creality. To make using our products easier, please read this User Manual before you start and follow the instructions provided carefully.

Creality is always ready to provide you with high-quality services. If you encounter any issues or have any questions when using our products, please use the contact information at the end of this manual to contact us.

To further improve your user experience, you can find more about our devices via the following methods:

User manual: You can find instructions and videos in the SD card provided with the printer.

You can also visit our official website (<https://www.creality.com>) to find information regarding software, hardware, contact information, device instructions, device warranty information, and more.

Firmware Upgrade

Please visit our official website <https://www.creality.com/download>, switch to your language, then select your printer and model. Download the required firmware and install it to use it with your printer.

1. Do not use this printer by methods or operations not described in this manual, otherwise it may result in accidental injury or property damage.;
2. Do not place this printer near flammable materials, explosive materials or high heat sources. Please place this printer in a ventilated, cool and low-dust environment.
3. Do not place this printer in a vibrating or any other unstable environment, as the printing quality will be compromised when the printer shakes.
4. Please use the filament recommended by the manufacturer, otherwise the nozzle may be clogged or the printer may be damaged.
5. Please use the power cord provided with the printer and do not use the power cord of other products. The power plug must be plugged into a three-hole socket with a ground wire.
6. Do not touch the nozzle, hotbed or motor while the printer is in operation, otherwise you may get burned.
7. Do not wear gloves or accessories while operating the printer, otherwise the moving parts may cause accidental injury including cuts and lacerations.
8. After the printing process is complete, please use tools to clean up the filament on the nozzle while the nozzle is still hot. Do not touch the nozzle with your hands when cleaning, otherwise your hands may get burned.
9. Clean the printer frequently. Always turn the power off when cleaning, and wipe with a dry cloth to remove dust, adhered printing plastics or any other material off the frame, guide rails, or wheels. Use glass cleaner or isopropyl alcohol to clean the print surface
10. Children under the age of 10 must not use this printer without adult supervision in order to avoid accidental injury.
11. This printer has a safety protection mechanism. Please do not manually move the nozzle or printing platform quickly while the printer is on, otherwise the printer will automatically power off for protection.
12. Users should abide by the laws and regulations of the country and region where the equipment is located (place of use), abide by professional ethics, and pay attention to safety obligations. It is strictly forbidden to use our products or equipment for any illegal purpose. Our company is not responsible for the relevant legal responsibilities of any violators.

1. About the Printer

1 Nozzle Assembly

2 Printing Platform

3 Leveling Nuts

4 Display Screen

5 X-axis Motor

6 Filament Detection

7 Handle

8 Material Rack

9 Material Barrel

10 Z-Axis Motor

11 Type-C Port

12 Storage Card Slot

13 X-axis Limit Switch

14 Y-axis Limit Switch

15 Y-axis Motor

16 Power Supply Dial-up

17 Z-axis Limit Switch

18 Power Switch

2. Equipment Specifications

Equipment Specifications	
Model	Ender-5 S1
Modeling Technolog	FDM
Modeling Dimensions	220*220*280mm
Leveling Method	Auto-leveling with CR-Touch
Number of Nozzles	1pcs
Extruder Diameter	0.4 mm (standard)
Slice Thickness	0.05–0.35mm
Precision	±0.1mm
Typical Speed	120mm/s
Printing Speed	≤ 250 mm/s
Nozzle Temperature	≤ 300°C
Hotbed Temperature	≤ 110°C
Ambient Temperature	5°C–35°C
Filaments	TPU/PLA/ABS/PETG/ASA/HIPS/PC
Rated Power	350W
Input voltage	100–120V~, 200–240V~, 50/60Hz
Power Loss Recovery	Yes
Filament Detection	Yes
Printing Method	Storage card printing/online printing
File Format	STL/OBJ/AMF
Slicing Software	Creality Slicer /Cura/ Simplify3D
Operating Systems	Windows XP/MAC/Linux
Language	中文/ English/ Español/ Deutsche/ Français/ Русский/ Português/ Italiano/ Türk

3. Parts List

1 Base Component

2 Top Component

3 Printing Platform

4 Z-axis Component

5 Profile x 4

6 Platform L Support Assembly

7 Platform R Support Assembly

8 Diagonal Bracing

9 Material Rack

4. Accessory List

10 Cutting Plier

11 Wrench and Screwdriver

12 Nozzle Cleaner

13 Blade

14 Storage Card
& Card Reader

15 Power Cable

16 Cable Tie × 5

17 Flexible Flat
Cable Clip × 5

18 Bending Harnesses

19 Wire Clip (Blue)

20 Filament (200g)

21 Spare Nozzle

22 Teflon Tube

23 Material Barrel

24 M5x30 Hexagon Socket
Head Cap Screw with S
pring Washer × 4

25 M5x25 Hexagon Socket
Head Cap Screw with S
pring Washer × 20

26 M5x25 Hexagon Socket
Head Cap Screw × 4

27 M5x20 Hexagon
Socket Head Cap
Screw × 6

28 M5x14 Hexagon Socket
Button Head Screw × 2

5. Assembling 3D Printer

5.1 Install the Profile

- A. Align the profile progressively with the holes in the printer base according to the numerical label and pre-lock it individually using the No.25 screws first and then finally lock it all together.

Tips: Please make sure that each profile is installed in the correct position.

25 M5x25 Hexagon Socket Head Cap Screw with Spring Washer x 8

5. Assembling 3D Printer

5.2 Install the Top Component

A. Place the top component on top of the profile and pre-lock each of the four corners with No.25 screws before locking them all.

25 M5x25 Hexagon Socket
Head Cap Screw with
Spring Washer x 8

5. Assembling 3D Printer

5.3 Install the Z-axis Kit

A. Put the print platform component on the foam support and combine it with the Z-axis component to form a Z-axis kit, then fasten it with the No.25 screws.

Tips: The foam in the box can be used as a support.

25 M5x25 Hexagon Socket Head Cap Screw with Spring Washer x 4

5. Assembling 3D Printer

5.3 Install the Z-axis kit

- A. Place the Z-axis assembly upside down on the foam support, then fix the platform support to the linear bearing, and lock it with No.26 screws;
- B. Secure the other end of the platform support to the profile using No.27 screws to lock it in place.

Tips: ① Platform L support assembly: L support + support block;
② Platform R support assembly: R support + support block

②6 M5x25 Hexagon
Socket Head Cap
Screw × 4

②7 M5x20 Hexagon
Socket Head Cap
Screw × 2

5. Assembling 3D Printer

5.3 Install the Z-axis Kit

A. Tilt the Z-axis kit while placing the bottom inside the equipment frame profile.

5.3 Install the X-axis Kit

- A. Hold the frame at an angle, push the Z-axis kit in and lift it between the top profile and the optical axis;
- B. Be sure that the bottom optical axis holder is located on the profile.

5. Assembling 3D Printer

5.3 Install the Z-axis Kit

A. Align the top of the Z-axis kit with the profile holes, pre-lock it first with the No.24 screws and then tighten all the screws.

24 M5×30 Hexagon Socket Head Cap Screw with Spring Washer × 4

5. Assembling 3D Printer

5.4 Install the Diagonal Bracing

A. Put two different diagonal bracing on the bottom of the profile and lock the ends to the profile using No.27 screws.

5. Assembling 3D Printer

5.5 Install the Material Rack

A. After assembling and tightening the material barrel and bracket into a material rack, use the No.28 screws to secure and lock it to the profile.

28 M5×14 Hexagon
Socket Button Head
Screw × 2

5. Assembling 3D Printer

5.6 Equipment Wiring

A. Connect the X-axis motor cable to the X-axis limit switch cable

B. Connect the filament detection line;

C. Connect the Extruder Kit line

D. Connect the Y-axis motor cable to the Y-axis limit switch cable

E. Connect the Z-axis motor cable to the Z-axis limit switch cable

F. Connect the hotbed cable

5. Assembling 3D Printer

5.7 Install the Teflon Tube

- A. Insert one end of the Teflon tube into the interface of the Teflon tube fixing block, with the other end inserted through the snap to the bottom and finally into the blue jaws.

5. Assembling 3D Printer

5.8 Fix the flexible flat cable

- A. To maintain a smooth alignment, please use flat cable clips and cable ties to secure the flat cables to the profile as shown in the diagram to avoid abnormal compression caused by printing interference and tangling during the operation of the device.

6. Using the 3D Printer

6.1 Switch on the Power

A. Please select the correct voltage mode according to the local grid voltage and then switch on the power.

Caution:

- Please ensure the correct position for the power supply switch and mains before supply connection, in order to avoid damage to the device.
- If the mains between 100V and 120V, please select the 115V for the power supply switch.
- If the mains between 200V and 240V, please select the 230V for the power supply switch (default is 230V).

6. Using the 3D Printer

6.2 Auxiliary Leveling

A. Click on "Settings" and go to "Leveling Method";

B. Click on "Z-axis Homing" first, and then adjust the Z-axis compensation value when the nozzle returns to the center of the platform, to ensure that the nozzle is approximately 0.1mm from the platform, about the thickness of a piece of an A4 paper.

6. Using the 3D Printer

6.2 Auxiliary Leveling

- A. Click on the numbers 2, 3, 4 and 5 on the screen respectively to move the nozzle to the corresponding position, turn the leveling nut and adjust the printing platform so that it is in just the right position to fit the nozzle with a spacing of approximately 0.1mm; then level the four corners in sequence.

		The nozzle is too far away from the platform, and the filaments cannot stick to the platform.
		Filaments are extruded evenly, just sticking on the platform.
		The nozzle is too close to the platform, leading to insufficient filament extrusion, even scraping the platform.

Tips: You can use a standard leveling card or a piece of A4 paper to aid leveling so that the nozzle just makes a scratch on the A4 paper; adjust the four leveling nuts in turn, and make continuous adjustments until you can feel a slight resistance from the nozzle when pulling on the A4 paper.

6. Using the 3D Printer

6.3 Auto Leveling

A. Click on "Settings", go to "Leveling Method", select "AUTO. LVL" and click on the "Start" button to start automatic leveling.

B. Until auto leveling is 100% completed.

6. Using the 3D Printer

6.4 Printer Preheating

A. Manual Temperature Setting: Select "Prepare", click on "Temperature Setting" and then manually set the temperature of the nozzle and hotbed based on the filaments used for printing.

6. Using the 3D Printer

6.4 Printer Preheating

A. Auto Temperature Setting: select "Prepare", click on "Temperature Setting" and select "Preheat PLA" or "Preheat ABS" to preheat the nozzle and hotbed based on the material to be printed.

Tips:

- 1、PLA Preheating Temperature: nozzle temperature 205°, hotbed temperature 60°; ABS preheating temperature: nozzle temperature 260°, hotbed temperature 90°.
- 2、When changing the filaments, if you need to heat the nozzle, pull out the filaments quickly after they have melted to avoid the cool-down of the melted filaments in the nozzle above the heat break.
- 3、If the filaments are pulled out directly without heating the nozzle, some of the filaments may be left in the nozzle, resulting in clogging or even damage to the extruder.

6. Using the 3D Printer

6.5 Filament Loading

A. Cut and straighten the front end of the filament at 45 degrees and place the tray on the material rack.

Tips: How to Replace the Filament?

Method 1. Withdraw the filaments quickly and feed the new filaments after the nozzle is preheated and filaments are pushed a little forward.

Method 2. Cut filaments near the extruder and slowly feed new filaments until they are fed into the material barrel.

6. Using the 3D Printer

6.6 Start Printing

A. Visit our official website (<https://www.creality.com>) to download and install the software, or install the Creality software via the memory card provided with the printer.

B. Go to Select language → Next → Select model → Next → Finish to complete the configuration.

C. Launch the Creality slicing software → Load → Select the file.

6. Using the 3D Printer

6.6 Start Printing

D. Generate the G-code file → Save it to the memory card.

>>

E. Insert the memory card.

Note:

1. For details on using the software, please refer to the slicing software user manual on the memory card.
2. Saved files must be placed in the root directory (not a subdirectory) of the memory card.
3. The file name must be Latin letters or numbers, not Chinese characters or other special symbols, and no more than 20 characters.
4. Do not insert or remove the memory card during the printing process.

6.Using the 3D Printer

6.6 Start Printing

A. Choose the file to be printed;

B. Click on the Start Printing button;

C. Already in printing status.

7. Maintenance Instructions

7.1 Platform Plate Maintenance

A. If there are residual filaments on the platform plate, scrape them off lightly with a blade and print again.

B. If the first layer of the model is not properly glued, it is recommended to apply solid adhesive evenly on the surface of the platform plate before preheating for printing.

7.2 Nozzle Replacement

A. Remove the silicone protective cover;

B. Remove the old nozzle;

C. Mount a new nozzle;

D. Mount the silicone protective cover.

Warnings:

1. If there are filaments inside the nozzle, it is necessary to preheat the nozzle when replacing it;
2. Prevent scalding when replacing nozzles which are hot;
3. Use a tool to hold the heating block in place when removing the nozzle to avoid damage to the components.

7.3 Lubrication Protection

A. You are recommended to purchase your own lubricating fluid for regular maintenance of the optical axis area.

7.4 Error Code Instructions

No.	Error Code Instructions	Parameters
1	E06	Hotend Thermal Runaway!
2	E07	Hotend Heating Failed!
3	E08	Hotend Thermistor Error!
4	E09	Hotbed Thermal Runaway!
5	E10	Hotbed Heating Failed!
6	E11	Hotbed Thermistor Error!
7	E201	Timeout
8	E202	Homing Failed
9	E203	Probing Failed
10	E204	Click Reboot

In the event that any of the above problems arise and cannot be resolved:

- ① Please visit <https://www.crealitycloud.com/product>, click “Products” and select the right model, and then click “Related” to view the tutorials on after-sales service;
- ② Or contact our after-sales service center at +86 755 3396 5666, or send e-mail to cs@creality.com.
