

Drainage instructions

-

Middle drainage port: Used in **dehumidification mode**. Remove the plug and connect a drain hose (no exhaust hose required for this mode). Figure below 📌

-

Bottom drainage port: Used when the water tank is full.

Water Drain Plug Instructions:

1. **Stop the unit** when the control panel shows "P1" or "✓". Do not move the AC while draining.

2. **Locate the drain plug** at the rear drainage port.
3. **Remove the drain plug** to allow condensate water to flow out automatically.
 - If the drain pan fills up during drainage, temporarily reinsert the plug to pause draining.
 - Empty the drain pan and repeat until the tank is fully drained.
4. **Securely reinsert the drain plug** after draining to prevent leakage. Ensure no water continues flowing into the drain pan.
