

SlatWall Installation Instruction Sheet without J Trim

- 1 Locate the studs.
- 2 Install the first piece of GroovePro.
- 3 Level the first piece of GroovePro before screwing.

- 4 Screw the first piece of GroovePro into the studs.

- 5 Install the next piece of Groovepro on top of the first one and screw it into the studs.

Concrete Installation:

If you are installing GroovePro on concrete, pre-drill the concrete with a 5/32 drill bit. Space concrete screws about 1 ft apart.

SlatWall Installation Instruction Sheet with J Trim

- 1 Locate the studs.
- 2 Install the first J-trims horizontally, level it and then screw it into the studs.
- 3 Install the second J-trims vertically, level it and then screw it into the studs.

The easiest way to install GroovePro is from the floor up.

- 4 Install the first piece of GroovePro. Make sure to install it inside the J-trims.

- 5 Screw the first piece of GroovePro into the studs.

You must start and finish the installation on studs.

GroovePro can be cut horizontally or to fit any dimensions vertically.

- 6 Install the next piece of GroovePro on top of the first one and screw it into the studs.

Concrete Installation:

If you are installing GroovePro on concrete, pre-drill the concrete with a 5/32 drill bit. Space concrete screws about 1 ft apart.
