

INSTRUCTION MANUAL

Light Kit for Disney Castle 71040

Thank You

For Purchasing this product. To give you the perfect hidden-line effect, we use severely thin aviation-grade wire with high tension and pressure tolerance. However, due to its thin nature, be careful not to cut through it as it might be susceptible to shearing during installation. Always be careful not to press brick pieces down on the wire.

Let's Get Started

if you face any challenges, please feel free to reach out via **support@gameofbricks.eu** Please note that we offer 2 years of free light kit maintenance.

Remote Activation

#1 ACTIVATION

If it didn't help...

#2 ACTIVATION

01

Change power source (for example you can use a power bank)

03

Hold the power button for 3 seconds as soon you connect the remote board to power, just like in the video above. Those seconds are very important.

02

Disconnect every light from the remote board like in this video, please find it by visiting this page:

<https://youtu.be/c-bLNqpDCLUw>

The majority of faults with your remote or sound systems are due to a battery box. We highly recommend the use of a power bank (or any other power source) as that will solve most if not all of those problems. Please ensure that the maximum voltage is 6v.

Please also note that the remote will consume power even if it's off. So we recommend connecting the remote to a power source only while using it. We've done our best to find an alternative to battery boxes but have so far fallen short. Your battery boxes are great if you wish to change batteries regularly or for regular kits (not remotefound). Please have our assurance that we will keep trying to make your experiences even better.

Step 8 - Standard RC + Sound Version

The following pictures are only for Standard RC +
Sound Version.

Step 8 - Standard RC + Sound Version

Sound Guide

SOUND GUIDE

(only if sound not works or cracky)

#1 fix

If the sound is cracking/hot working properly, please use **new batteries** or a **power bank**. It will solve your problem.

#2 fix

Sound directly depends on a remote...

01

Change power source (for example you can use a power bank)

03

Hold the power button for 3 seconds as soon you connect the remote board to power, just like in the video above. Those seconds are very important.

02

Disconnect every light from the remote board like in this video, please find it by visiting this page:

<https://youtu.be/-bLNgpDCLUw>

#3 fix

Please test the sound module by using our step-by-step video guide. Please let us know if you can still hear the sound.

<https://youtu.be/lxBkXoVD7xo>

#4 fix

Please check if sound files are in the sound module (sometimes our colleague forget to install them, we sincerely apologize for it).

You can do it by connecting the sound module using your USB cable (same as you connect your phone to a PC). There is also step by step video available for this part.

03
Connect to the computer to add audio files using a USB cable

01
Connect to speaker

Play/stop

02
Connect to power

Please contact us at support@gameofbricks.eu with your results.

The main questions are:

01

Did you change the power source and the sound was still cracky/hot working?

02

Did remote work properly + video (if remote not working)

<https://youtu.be/cbLNgpDCLUw>

03

Did your sound work as shown in this video

<https://youtu.be/lxBkXoVD7xo>

04

Did it have sound files in your sound module?

Youtube links are available on our website:

<https://gameofbricks.eu/pages/instructions>

Connect light kit to the battery box and installation will be complete. If you would like to use another power source, please make sure the maximum voltage is 6V.
