Stop settling for blurry front-camera shots. The XView M4 turns your phone's rear camera into the ultimate selfie, vlog, and livestream tool — delivering stunning clarity, perfect framing, and pro-grade depth you'll never get from your front camera.

Thanks to its P2P direct connection technology, it pairs with your phone in seconds without using WiFi. Stay connected to your networks while enjoying stable, ultra-low 40ms latency. Plus, with a 50m range, shoot freely without limits.

Its N56 neodymium magnetic mount attaches instantly to your phone or metal surfaces. It's slip-free, size-free, and compatible with iPhone, Android, Samsung, and more.

Designed for creators who shoot solo, it delivers up to 3 hours of uninterrupted operation—just right for a full livestream or vlogging session using your rear camera.

Whether you're shooting from above, below, or sideways, the M4 adapts with ease:

One-click screen flip for low/high angle shots.

Left-right mirror mode for livestreams.

Adjustable screen size and full-screen display.

Its true-to-life colors and 400cd/m² brightness ensure your footage stays clear and vibrant.

Use the included 10m Bluetooth shutter remote to start, stop, and control your phone's camera remotely. Perfect for group shots, wide-angle vlogs, or spontaneous creative moments.

Sleek, rounded-corner design and ultra-portable, it comes in Shadow Black, Blush Pink, Cobalt Blue, and Pure White — the perfect pocket-sized companion for creators on the move.
