1. Introduction

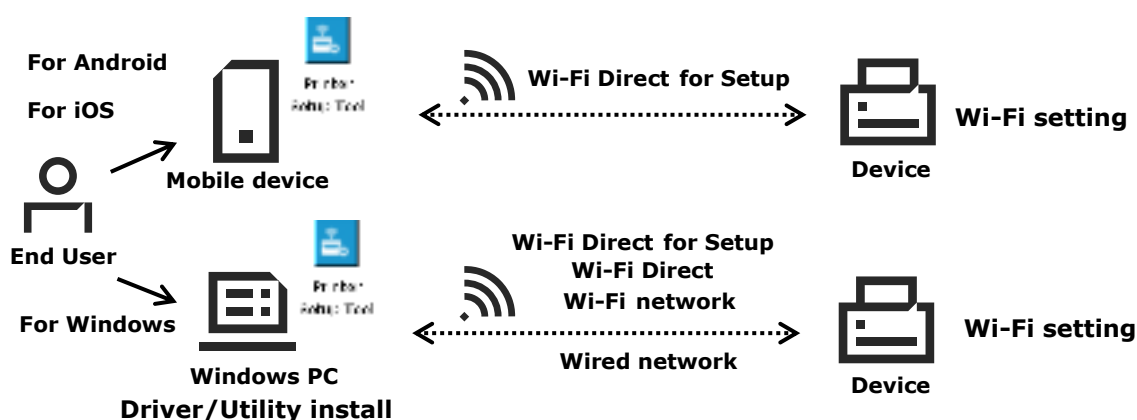

1.1. What is the Printer Setup Tool

Printer Setup Tool is intended to support end users who are unfamiliar with the setup process and to make setup easier.

Printer Setup Tool is available when the device is connected to a network or connected to Wi-Fi Direct for Setup in Wi-Fi Easy Setup mode. Wi-Fi Direct for Setup is different from normal Wi-Fi connection. It is a connection method for setup that is enabled by setting the device to the Wi-Fi easy setup mode.

1.2. System Overview

There are three types of Printer Setup Tool: Android, iOS, and for Windows.

Tool Type	Tool Description	Connecting to a device	Setup Scope
For Android	Mobile apps that run on Android	Wi-Fi Direct for Setup	Wi-Fi setting
For iOS	Mobile apps that run on iOS	Wi-Fi Direct for Setup	Wi-Fi setting
For Windows	Software that works when installed on a Windows OS	Wi-Fi Direct for Setup Wi-Fi Direct, Wi-Fi network Wired network	Wi-Fi setting Driver/Utility install

1.3. Target user

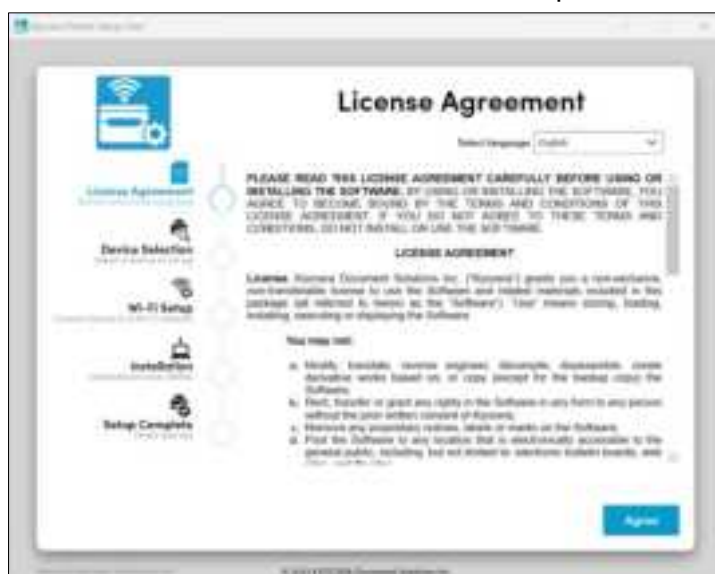

It is intended for end users who are not familiar with the device setup tasks in an environment where the end users are responsible for setting up the device s themselves.

2. How to Run Printer Setup Tool for Windows

Running Printer Setup Tool with “2.1 Download and run the package” will not support/discover TA models. When using Printer Setup Tool in a TA model, it should be done in “2.2 Run from the Product Library”.

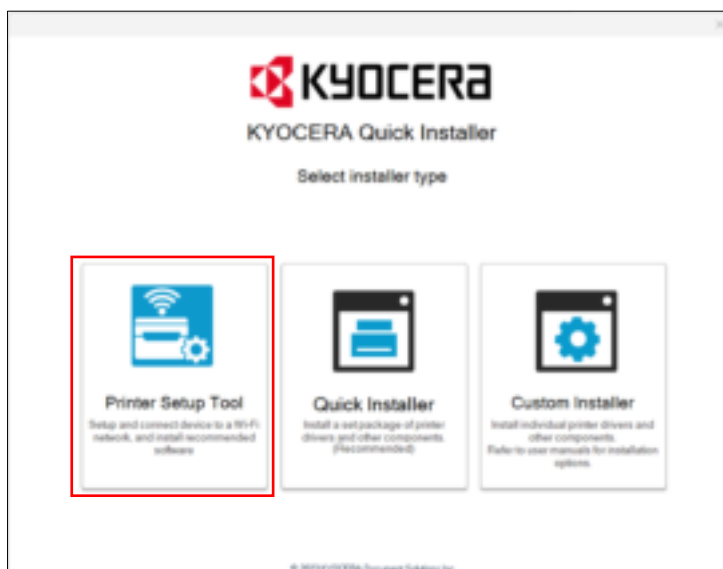

2.1. Download and run the package.

Users can download and run Printer Setup Tool from the Global Download Center or from the User Support page. Running the package starts the Printer Setup Tool and retrieves the data (Support Devices, Device Images, and Support Components) from the Kyocera Document Solutions website. The device information found on the device selection screen depends on this data.

2.2. Run from the Product Library

Users can run Printer Setup Tool from the Product Library. Data (Support devices, device images, and support components) is retrieved from the product library file, and devices discovered on the device selection screen are discovered based on this data.

3. Printer Setup Tool v1.0 for Windows Features

The Printer Setup Tool version 1.0 for Windows supports a feature that makes it easy to configure Wi-Fi settings, install drivers and utilities on devices from a host PC with a Windows OS.

3.1. Device discovery and selection

The device selection screen of the Printer Setup Tool displays a list of devices on the same network as the host PC that is connected to the wired networks or the Wi-Fi network, and devices that are within communication range of the host PC with Wi-Fi Direct or Wi-Fi Direct for setup enabled. Wi-Fi Direct for Setup is enabled when the device is initially set up or by selecting Wi-Fi Easy Setup from the system menu.

When users select a device, users are taken to the Wi-Fi Setup screen.

For devices that do not support Wi-Fi, skip the Wi-Fi settings screen, and proceed to install the recommended drivers and utilities.

3.2. Wi-Fi initial setup

Users can perform the initial setup when using the device with a Wi-Fi connection.

Different operations are required to use the Wi-Fi information connected to the host PC or not.

3.2.1. When using Wi-Fi information connected to the host PC

Perform initial Wi-Fi setup of the device using the Wi-Fi information connected to the host PC.

In the settings screen, just press "Yes" to connect the device to the Wi-Fi that host PC is connected to.

3.2.2. When not using Wi-Fi information connected to the host PC

3.2.2.1. Auto Set (select from list)

If the Wi-Fi information connected to the host PC is not used, a list of Wi-Fi network candidates is retrieved via the selected device.

When the user selects Wi-Fi, the password entry field for the selected Wi-Fi is displayed. To connect the device to Wi-Fi, users must enter a password.

3.2.2.2. Manual configuration (enter and configure required information)

If the list doesn't show the Wi-Fi network users want to connect to, users can set it manually. The

following settings are required when users manually configure Wi-Fi:

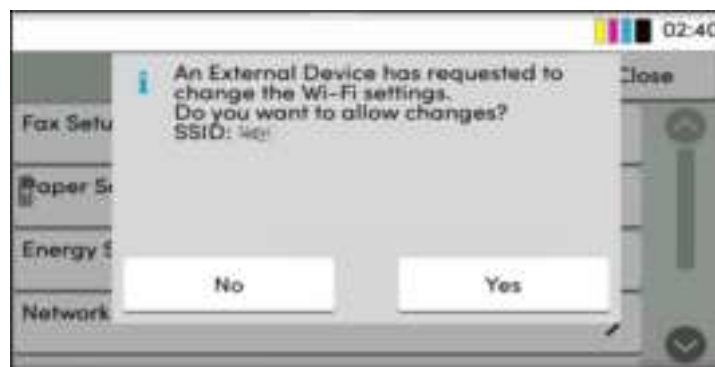

- Wi-Fi network name (SSID)
- Network Authentication
- Encryption
- Password

3.2.3. Allow connections through device operations.

After users select a Wi-Fi network in the Wi-Fi Easy Setup Mode, users must operate the panel on the device itself to continue setup.

When users follow the instructions on the device panel and interact with the device, the device's network interface automatically restarts the device connects to the network. To prevent unauthorized setup by a third party, this operation is to prove that the user himself/herself is performing setup and cannot be performed remotely.

3.2.4. Restrictions when connecting multiple users

If two or more users are connected to the device, the second or subsequent users will see an error message on their setup screen and Wi-Fi Setup will not run. In this case, only the user who first connected to device can continue with Setup.

3.2.5. Enter device username and password

If the selected device is via the wired network or the Wi-Fi network, and the administrator username and password differ from the default, users will be required to enter the device administrator username and login password.

3.3. Installing recommended drivers and utilities

Users can install the recommended drivers and utilities. Users can install only the recommended drivers and utilities, not separate installations.

During installation of the recommended drivers and utilities, the following information for the selected device is displayed:

- Device Name

- IP address
- Serial Number
- Host name

When the user selects [Use host name as port name] the IP address is replaced with the host name.

3.3.1. Recommended driver and utility types

Install the following drivers and utilities, depending on the type of device:

- Printer Driver (KX driver)
- Scanner Driver (TWAIN driver)
- FONTS
- KYOCERA Quick Scan
- Status Monitor 5

3.3.2. Check the progress of the installation.

Users can check the installation status of recommended drivers and utilities. If all drivers and utilities are successfully installed, a success message appears below the progress bar.

After a successful installation, users can set the following options:

- Print a test page.
- Set on default printer.
- Set Duplex on default.

Users cannot set this option if installation of the printer driver (KX driver) has failed.

4. System Requirements

4.1. Supported Operating Systems

- Windows Server 2016
- Windows Server 2019
- Windows Server 2022
- Windows 10 (Include ARM64)
- Windows 11 (Include ARM64)

4.2. Prerequisite

- installation of Microsoft .NET 6.0 and later

4.3. Supported Languages

Arabic	Catalan	Czech
Danish	English	German
Greek	Spanish	Finnish
French	Hebrew	Hungarian
Italian	Japanese	Korean
Dutch	Norwegian	Polish
Portuguese (Portugal)	Portuguese (Brazil)	Romanian
Russian	Swedish	Thai
Turkish	Vietnamese	Chinese (Simplified)
Chinese (Traditional)		

5. Support models

The following lists the models supported by Printer Setup Tool v1.0.

Models
ECOSYS PA4000x
ECOSYS PA4000wx
ECOSYS MA4000x
ECOSYS MA4000fx
ECOSYS MA4000wfx
ECOSYS MA4000wifx

About KYOCERA Document Solutions America, Inc.

Kyocera Document Solutions America, Inc. (<https://usa.kyoceradocumentsolutions.com>) is a group company of Kyocera Document Solutions Inc., a global leading provider of total document solutions based in Osaka, Japan.
