MANUFACTURING

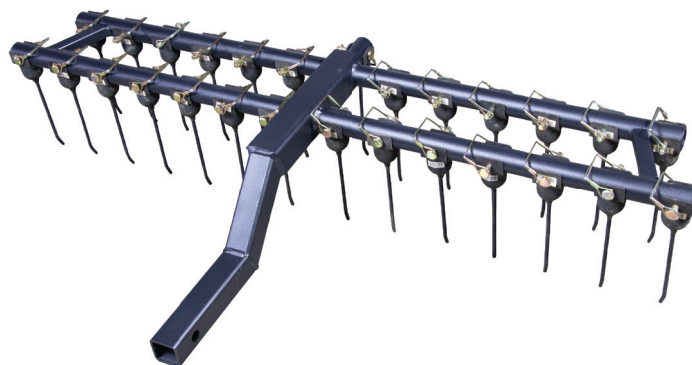

SG
RAKE

TURN YOUR STEEL GREEN INTO A SEEDING AND DETHATCHING MACHINE

The SG Rake attachment transforms your spreader/sprayer into a dethatcher and seeding rake in one machine. Save time by preparing the soil and spreading seed in one pass, or use the SG Rake for dethatching. With the SG Rake, you can easily adjust the down pressure for overseeding an existing lawn or preparing bare ground to seed a new lawn.

FEATURES

- Double rows of tines, six inches apart, make the SG Rake an efficient tool for your next seeding or dethatching project
- The heat-treated tines are ten inches long and 9/32" thick, with four inches between tines
- Each tine is removable without tools, making the SG Rake easily customizable to the needs of your project
- 55-inch powder-coated steel frame
- Compatible with Steel Green Manufacturing models SG36, SG42, SG46, and SG52 via the Steel Green Hydraulic Lift Kit
- The Hydraulic Lift Kit* includes lift frame, hydraulic assembly (mounts under the machine), smaller front tires (required to allow room for hydraulic lift kit on SG36/SG42 models), joystick control valve, mount, hoses, brackets, and fittings required to attach the SG Rake

**Note: The Hydraulic Lift Kit (sold separately) must be installed to operate this attachment.*
