RECOMMENDATION for our DIAMOND B-60 v.3 bookshelf speakers by “hificlass” (06-2025).

Sonic precision and elegant design

The TAGA Harmony Diamond B-60 v.3 speakers impress not only with their sound but also with their refined aesthetics. Crafted with attention to detail, the cabinets come in several natural wood veneer finishes and present a modern, classy look. The matte walnut version stands out in particular, where “the drivers are flush-mounted with the front panel,” and the cabinet tapers at the back, forming “a distinctive profile” with a subtle indentation.

But the real magic begins once they’re powered up. The Diamond B-60 v.3 delivers “an open, natural sound, where the effortless lightness of the midrange draws attention”.

The music flows with clarity and ease – never aggressive, yet rich in air and definition.

The midrange remains transparent and uncolored, faithfully reproducing vocals and acoustic instruments.

The bass is one of the standout features – “tight, without any tendency to boom or artificial boost in the upper range”. It is dynamic, rhythmic, and well-integrated, never overpowering the rest of the spectrum.

Even with sudden volume spikes, the speakers maintain “full control without any signs of compression”.

The treble is smooth and natural, seamlessly blending with the rest of the frequency range.

The stereo imaging is spacious and immersive, creating “a genuine sense of participation in a live performance”.

Thanks to their high efficiency of 90 dB, the Diamond B-60 v.3 pairs well with a wide range of amplifiers, including tube models, which they “highlight with additional color and ease”.

These are speakers for those who value emotion, musicality, and precision – all wrapped in an elegant form that sounds just as good as it looks.
