AUTOMATE

Alexa Quick Start Guide

GETTING STARTED:

Before connecting Alexa to your Automate Pulse 2 account, please ensure your Automate Pulse 2 Hub and shades are working.

Go to your Automate Pulse 2 app and add the Hub following the suggested steps. Afterward, proceed to pair motorized shades through the Pulse 2 App.

To control your shades with Alexa, you will need the following:

1. Setup and working Automate Pulse 2 Hub.
2. Paired and working shades within the Pulse 2 App.
3. Automate Pulse 2 App and account login credentials
4. Alexa App and account.

---

1. In the Alexa App select the **More** page at the bottom. Then select **Skills & Games**.
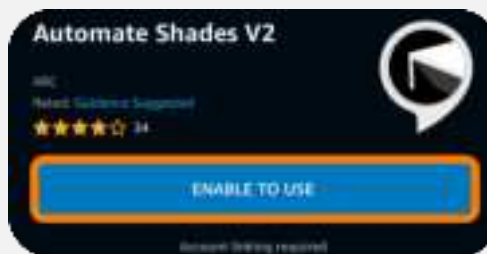

Note: Alexa App version: 2.2.634937.0

---

2. Search **Automate Shades v2** at the top and select the Skill.

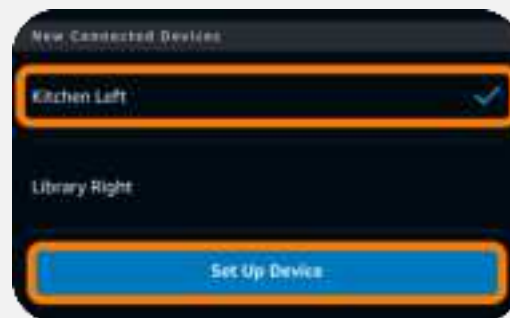

---

3. Select **Enable to Use** and log in.

Enter the email and password associated with your Automate Pulse 2 App you would like to link.

---

4. Select **Continue** to discover Scenes and Devices.

Select a discovered shade and then select **Set Up Device** to add it to Alexa. Repeat for each of the discovered shades.

---

5. Test the communication. Simply say:

"Alexa, Open Bottom-Up Roller Shade"

"Alexa, Close Roman Shade"

"Alexa, turn on Good Morning"

"Alexa close the Master Bedroom a little bit"

"Alexa, set Bedroom Shade to 22%".

TIPS:

Alexa responds to names created in the Automate Pulse 2 App. Consider using "one" when numbering shades instead of "1". Avoid using all special characters like % and numbers.

If you have changed the name of your shade or scene in your Pulse 2 App, please ensure you force close the Automate Pulse 2 App, then reopen the Pulse 2 App. Only then can you rediscover the devices and scenes in your Alexa App.
