

Doppler techniques:

- Hold the probe like you would a pencil, close to the end.
- Move the probe back and forth laterally over the artery to obtain the best signal.
- Support the probe with your hand resting on the patient so that the probe does not move as the cuff is inflated and deflated.
 - One of the keys to a successful exam is being able to keep the probe in place as you inflate and deflate the cuffs.
 - If the probe moves, you may not be able to hear the Doppler sounds return and may have to repeat the inflation.
