

Is Acoustics Critical to Your Product's Success?

Whether you're developing the quietest cabin experience, the most silent drone, the best headphones in the world, or the most environmentally friendly aircraft — **acoustics matters**.

And your challenge is unique.

At GRAS Sound & Vibration, we understand that standard solutions don't always fit. That's why we work with you to design and deliver **custom test microphones** tailored to your specific development needs.

Your Unique Product. Your Unique Acoustic Challenge. Our Expertise.

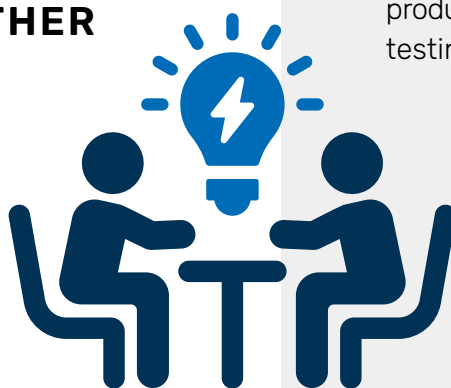

No two development programs
are the same.

That's why GRAS offers a proven
customization process:

- » We listen to your requirements – no matter how demanding.
- » We co-develop a solution, engineered for your application.
- » We deliver robust, reliable, and validated test microphones – ready to perform in your real-world scenarios.

LET'S DESIGN YOUR SOLUTION TOGETHER

If acoustics is critical to
your product – and your
challenge is unique
– **we're ready to help**

WE HELP YOU DESIGN the Future of Acoustics

From cabin comfort to environmental noise reduction, from consumer audio to aerospace innovation – the world's leading engineers rely on GRAS customized microphones to push the boundaries of what's possible.

With decades of experience and deep expertise, our engineers become an extension of your team – so you can focus on designing state-of-the-art products, while we ensure your acoustic testing is just as advanced.
