Author:altaria1993 [author's website](#)

I like building computers, buying useless junk for allmost notghing from Ebay, Listening to music (Iron Maiden :D)

Intro: How to make a paper model gun!

In this instructable, I am going to show you guys how to make a paper model gun!

I will be making the Berreta 92fs, but most guns are rather similar in building. So that would not be a very big problem.

Image Notes

1. Glock18, this one has a realistic slide.
2. Normal cap. magazine.
3. High cap magazine.

Image Notes

1. High cap. magazine.

Image Notes

1. P90 (Project 90 that is.).

Step 1: What will you need?

Ok, here is the standard what do you need step. it is not very much, or hard to get. And most people already have it.

1. A printer, it does not have to be able to print super quality, since you only need to make some basic colors. Still, be sure to have enough ink!
2. Printer paper without it you would not be able to print!
3. Glue. any glue that glues paper will work, i suggest strong glue.
4. Scissors/hobby knife, whatever you prefer, i prefer scissors, because i dont have a hobby knife, and i dont have money to buy one..
5. Tweezers, this may sound a bit odd, but they are usefull for handling small parts, and holding things like the barrel together.
6. The template of your gun. i uploaded the guns from the pack that i use for you guys, just click
[<http://dodownload.filefront.com/9840268//0e244cc9390a9bfe8c7bafdb857755622354a8d86f8e5e2fcc243ca18804488fc1afb327bf026c83> here]
note: i did NOT make these, and thus i take no credit for them, i only uploaded them for you

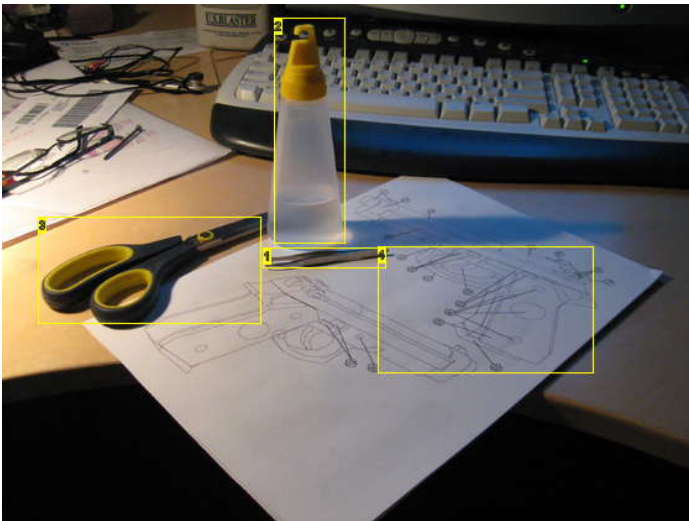

Image Notes

1. Tweezers
2. Glue
3. Scissors
4. The template + instruction paper, already printed.

Step 2: Starting: the barrel

Ok, now you have everything ready, you can start the actual cutting and making of the gun!

note:

I prefer starting with the barrel, then the slide, handle and as last the trigger and trigger guard. Of course you can do it different, but i will explain it in this way in this Instructable

1,2,3. Print your template, I also prefer printing the instruction paper, since that will let me make it without my pc on too.

4,5,6,7. start cutting out part one,

8. Oh no! My glue bottle is all filled with dried glue! What should i do?

9. Just grab your tweezers, and start pulling it off, should not be that hard!

10. There, all clean again!

11. Apply glue on the nessecary flaps.

12. Now use your tweezers to hold them firmly together, untill the glue is hard enough to hold itself. I suggest using tweezers, so you wont get glue on your fingers/hands too much. And also this barrel part was too small for me to hold together, so i had to use tweezers here.

13. Glued together. but we still have diffrent bits to glue together!

14. now we go glue these two together!

15. and there we go, glued and dry!

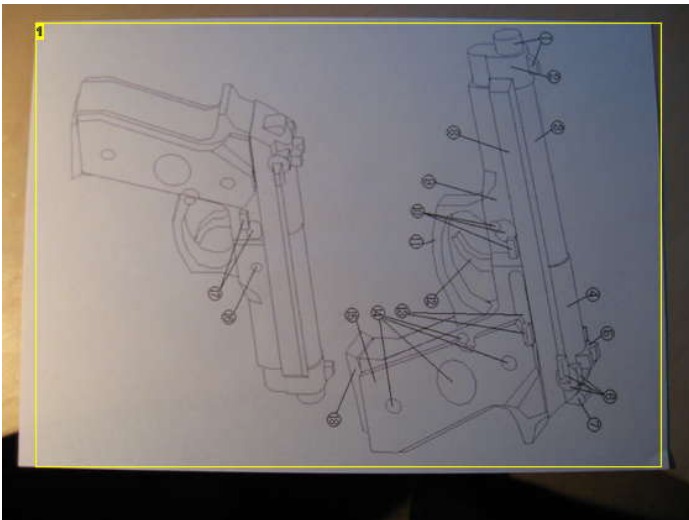

Image Notes

1. The instruction paper, its not really instructions on it, just more a help to find out which part belongs where.

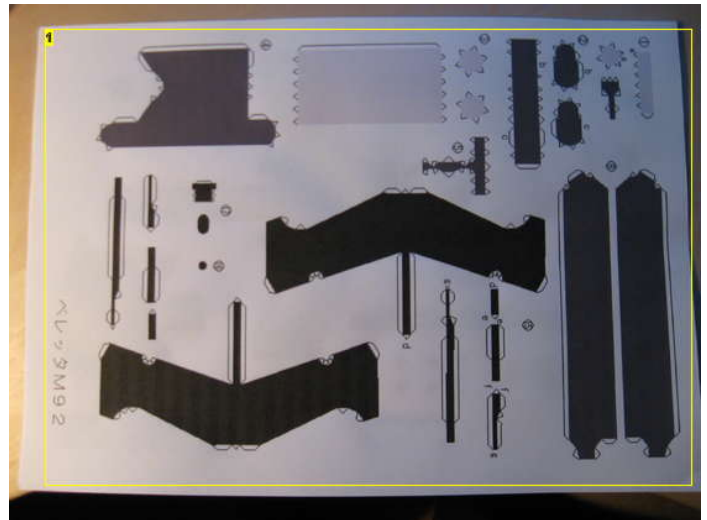

Image Notes

1. Template paper No. 1

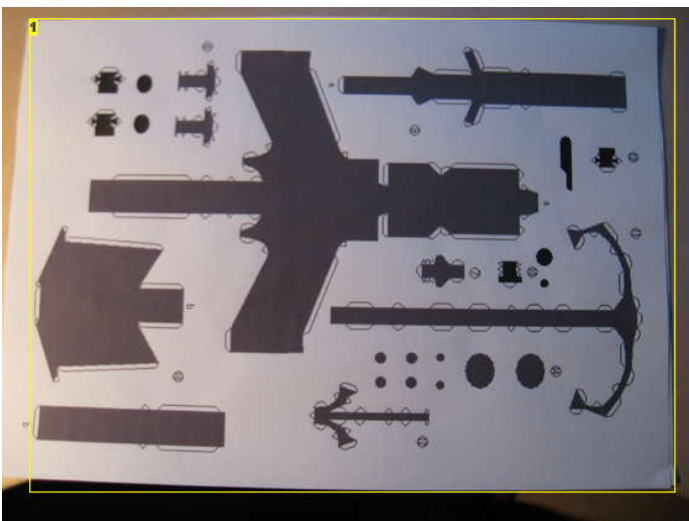

Image Notes

1. Template paper No. 2

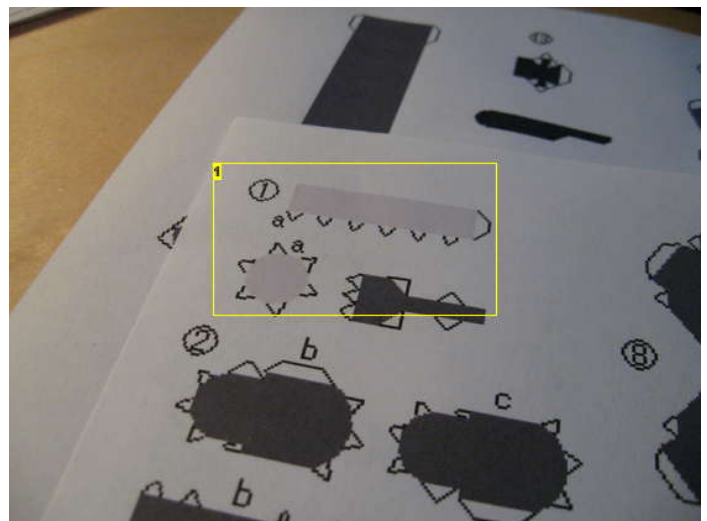

Image Notes

1. these are part 1, thats what were gonna do in this step!

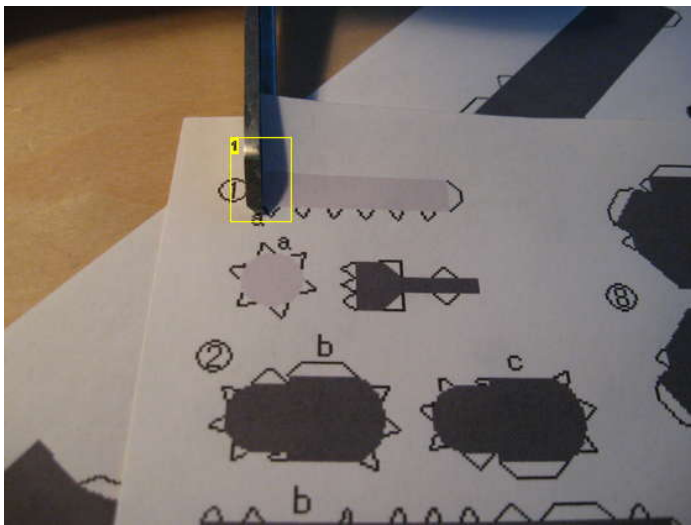

Image Notes
1. Cut it!

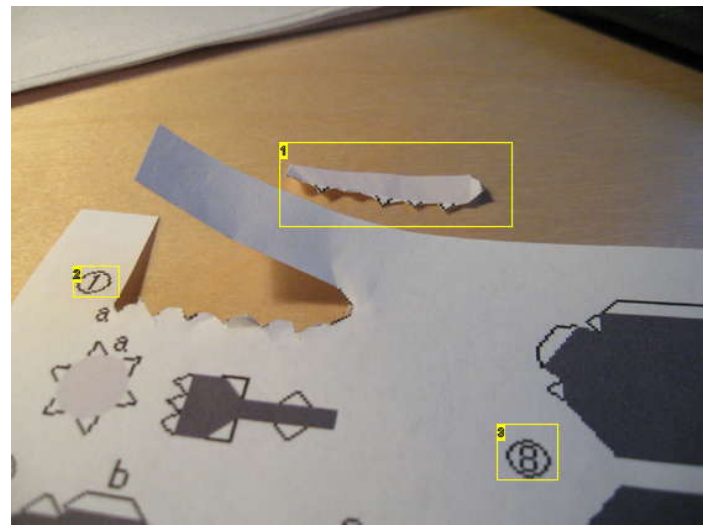

Image Notes
1. Cut all the way out!
2. This is the step we are doing right now
3. We aren't that far.. yet!

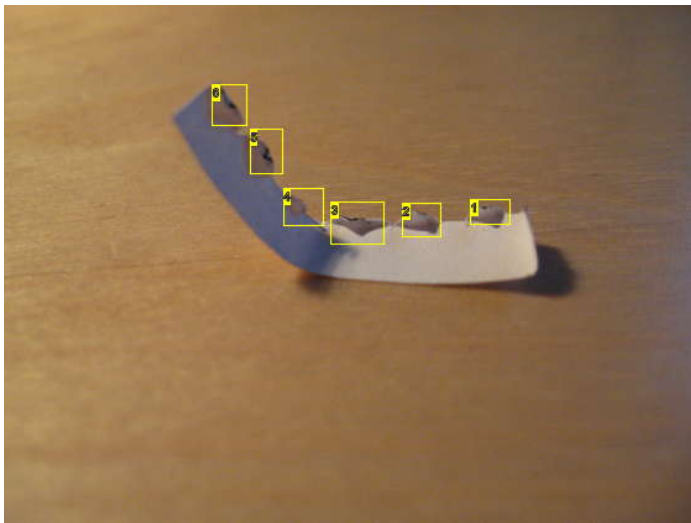

Image Notes
1. Fold.
2. Fold.
3. Fold.
4. Fold.
5. Fold.
6. Fold.

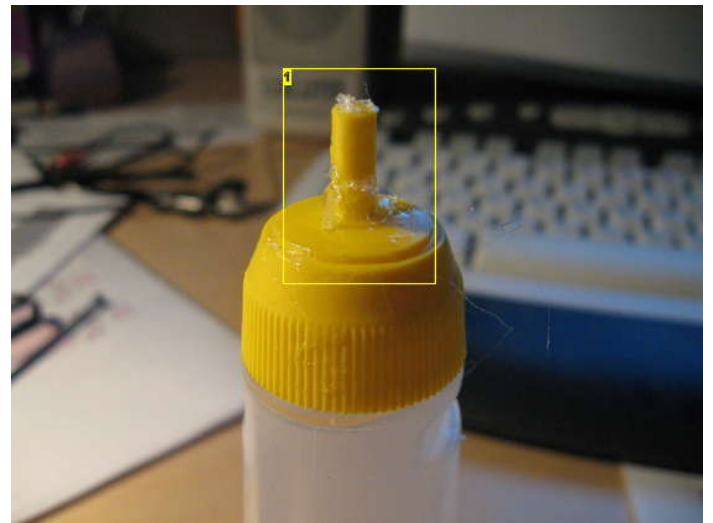

Image Notes
1. Not good.

Image Notes
1. Cleaning.

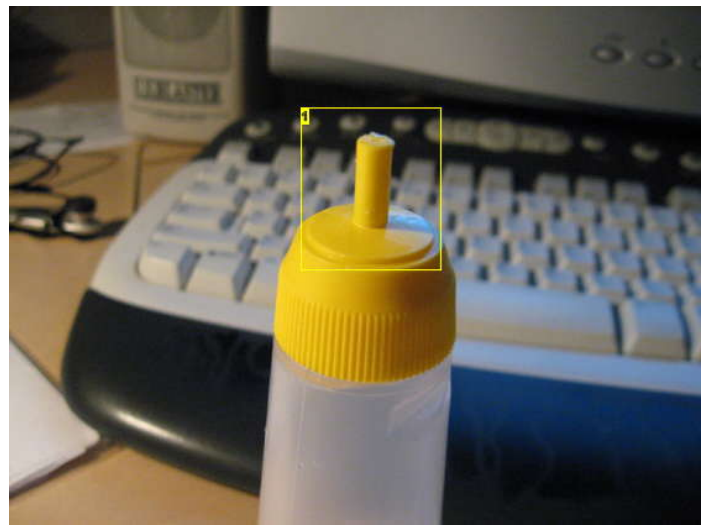

Image Notes
1. Good.

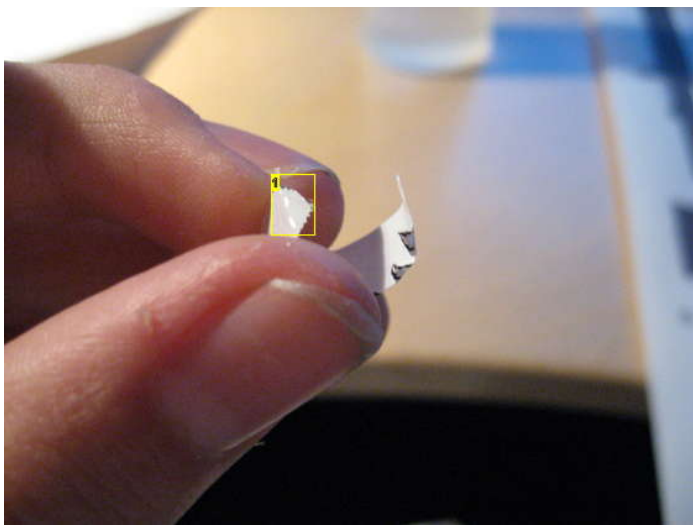

Image Notes
1. Glue applied.

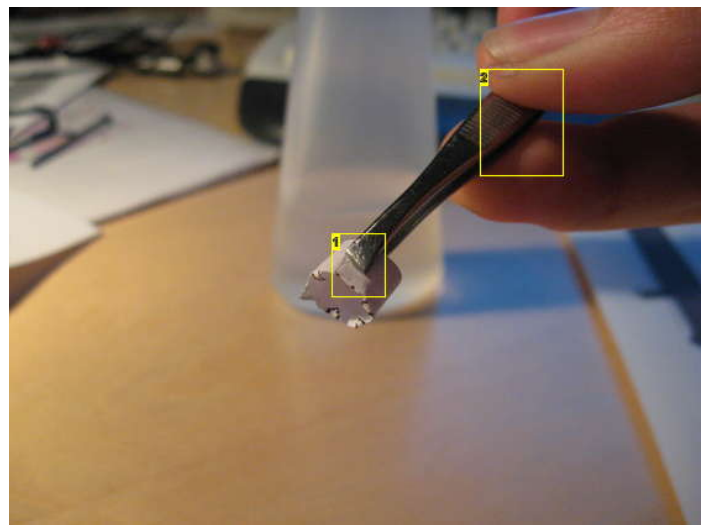

Image Notes
1. Right there!
2. No need to pinch that hard, as long as they are together they will be happy :).

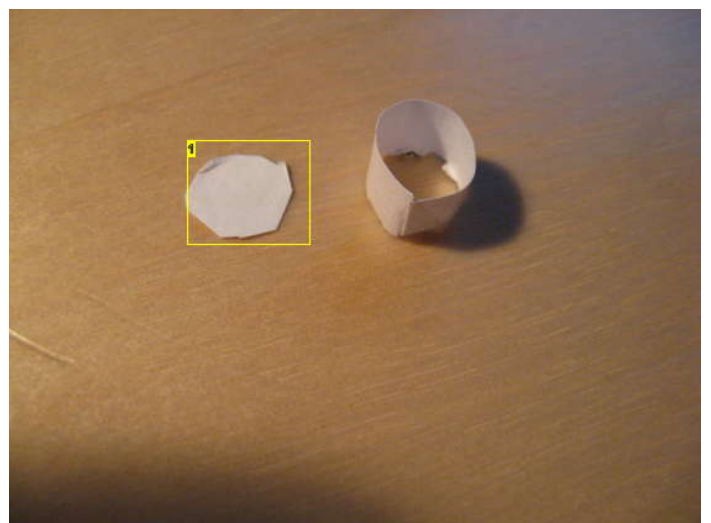

Image Notes
1. Apply glue here.

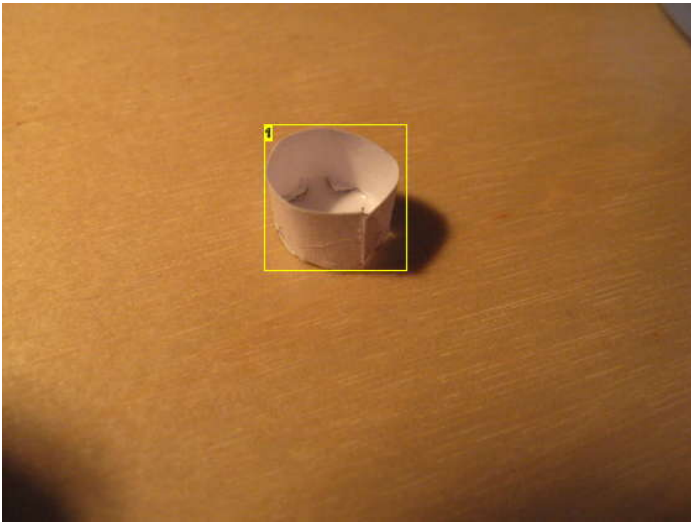

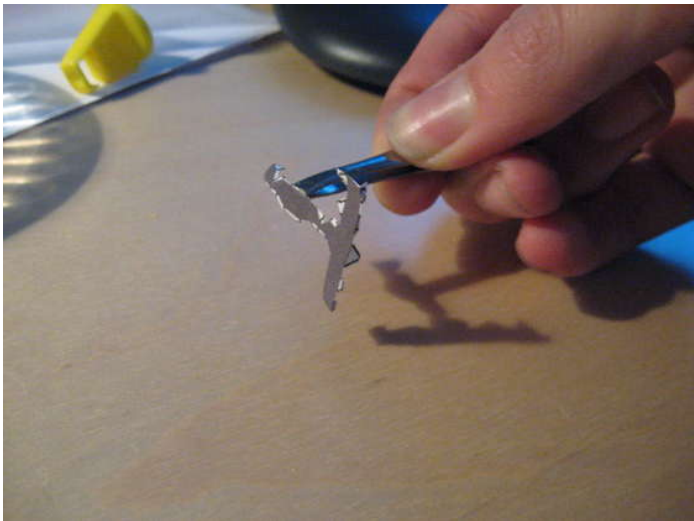

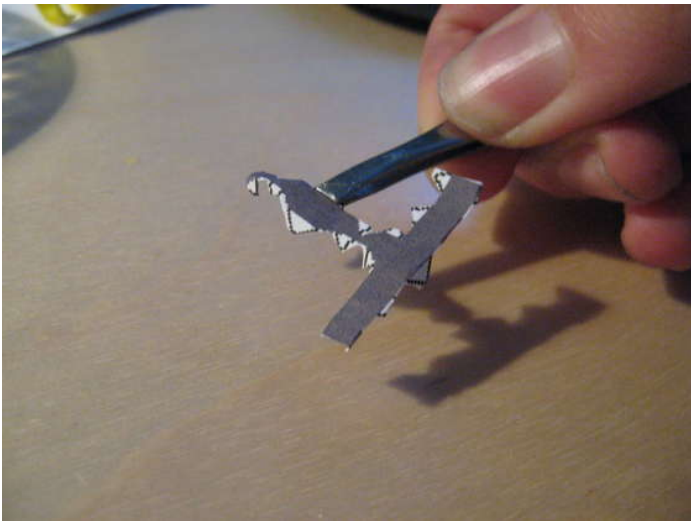

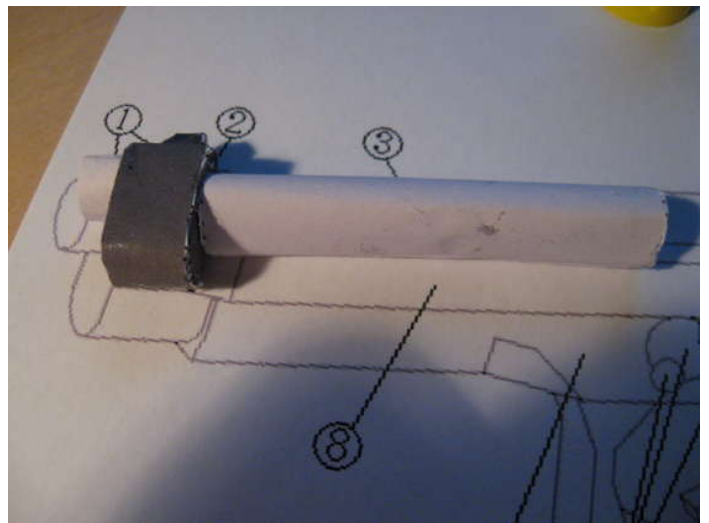

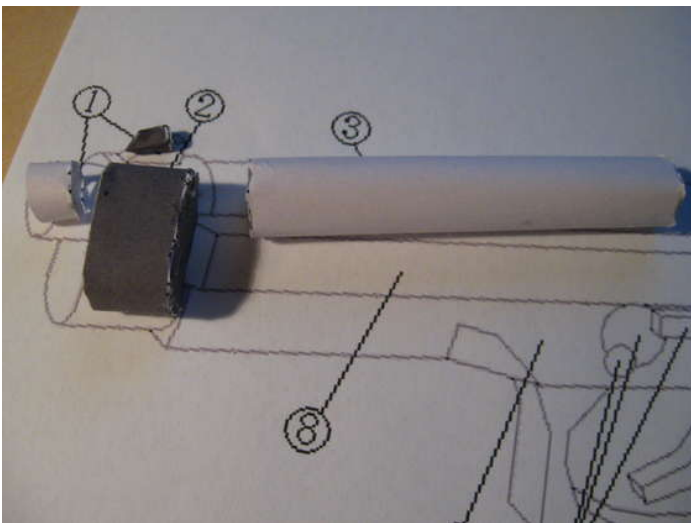

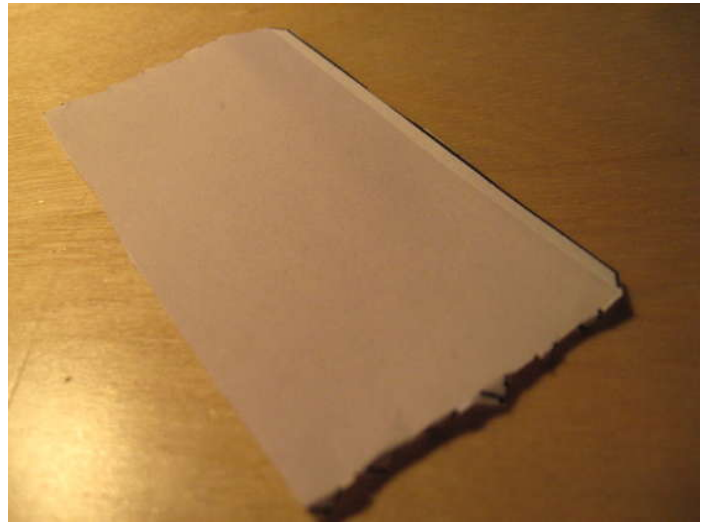

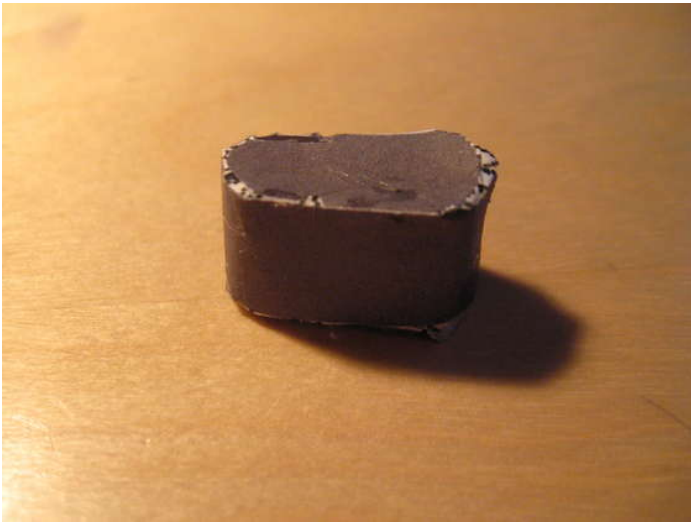

Image Notes

1. Put together.

Step 3: The rest of the barrel and slide

- 1, 2. This is a technique i use to bend over small flaps, i just get teh tweezers, and hold them along the edge of the flap you wnaat to fold. Then just bend over the rest, and you will have a nice anc straight fold, on small flaps.
3. this is the front part of the slide, because this model has no slideable slide, i wont have to make any holes to slide the barrel trough.
4. this is the barrel itself, first of all, cut it all out, and fold the flaps.
5. then apply glue on the big flap to connect the long sides.
6. Press the flap to the part you want it to get glued to.
7. All the parts of the barrel allign!
8. And this is with the parts of the barrel connected.
- 9, 10. how the barrel, and slide, should look like when finished.
11. A view trough the rear and front sight, shouldnt be that hard.

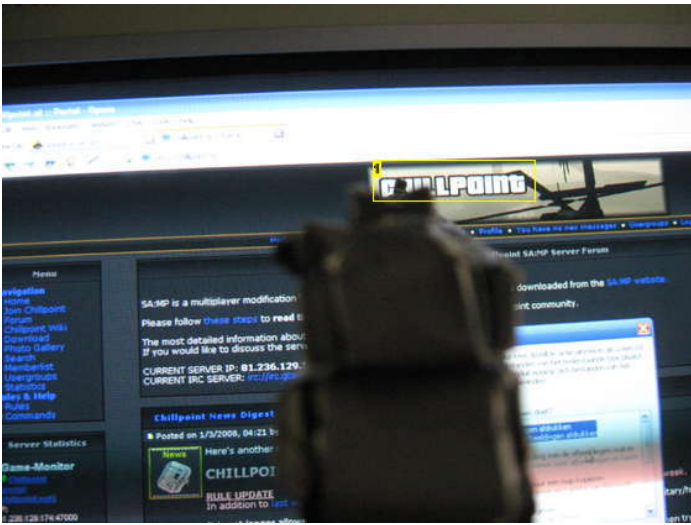

Image Notes

1. That's the SA-MP server I play on, Chillpoint(.net)

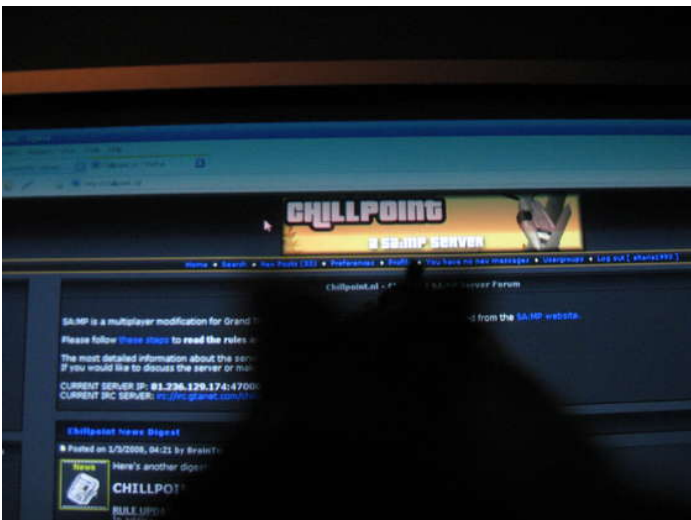

Step 4: Connecting the main parts of the gun.

Ok, I know that I didn't make steps for each part of the gun. Since it's different with every gun, and with common sense, you should be able to figure that out for yourself.

1. This is the rest of the gun, without the details.
2. All parts together.
3. Put some glue on one of the parts, and stick them together.
4. Finished! Now this was a simple one, just two sheets. Took me a total of about 2 hours to make. But I also made a P90, which took about 6-7 hours to make.
5. A final look through the sights!

Good luck, and happy gunmaking!

Oh, and please post your results!!

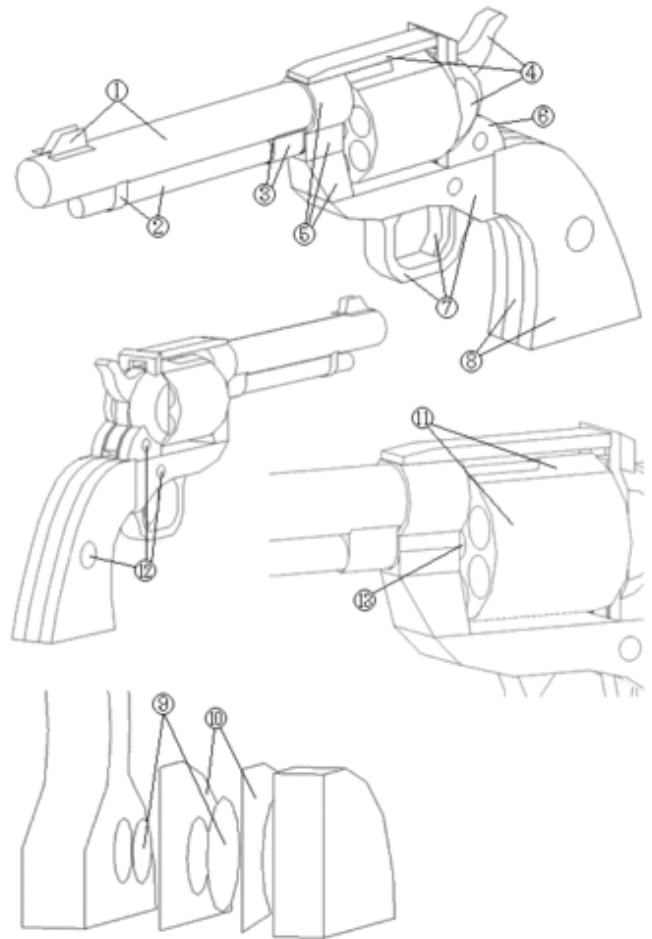

Step 5: Colt Single Action Army

The instructions for the Colt Single Action army, also known as the Colt Peacemaker.

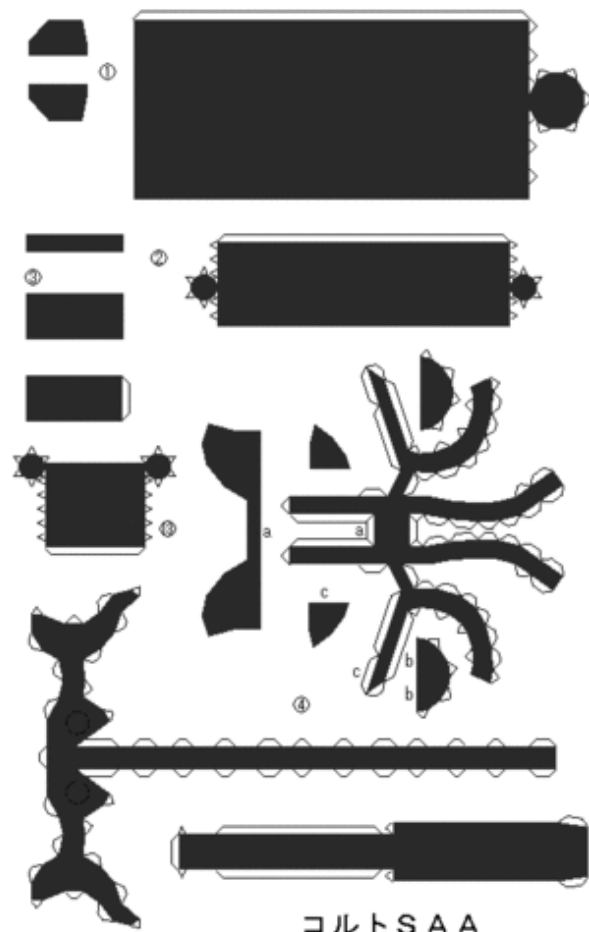

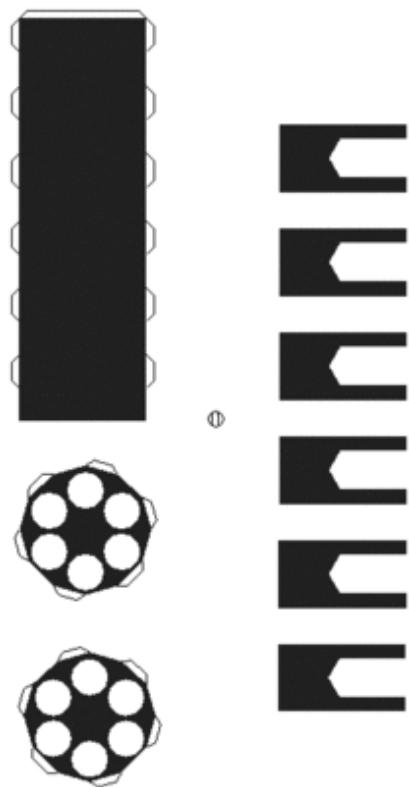

more information can be found [here](#) .

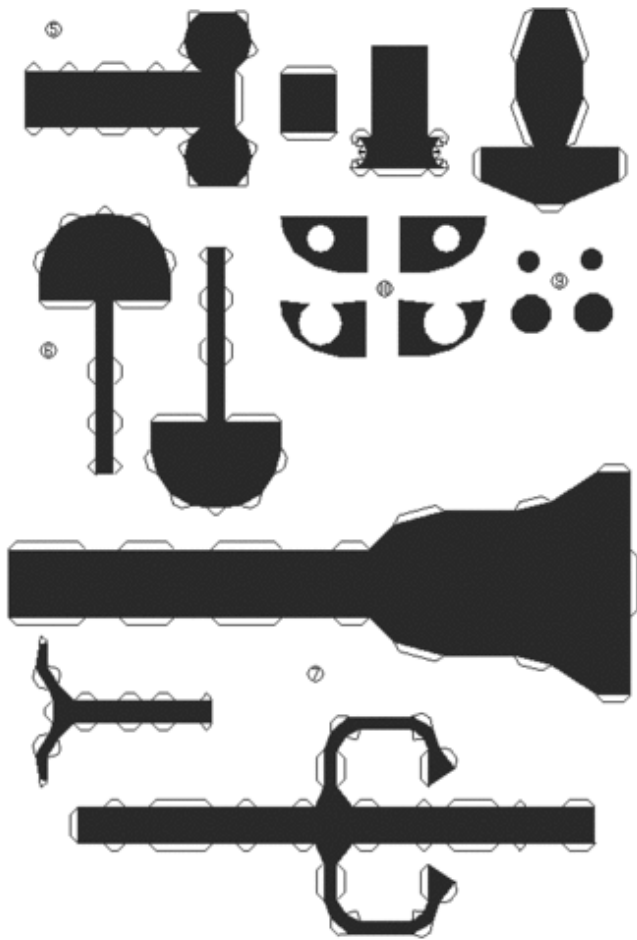

Note:

*I did **not** make this gun, and thus I take **no credit** for them. All I did was upload them here.*

Step 6: Smith & Wesson Model 19

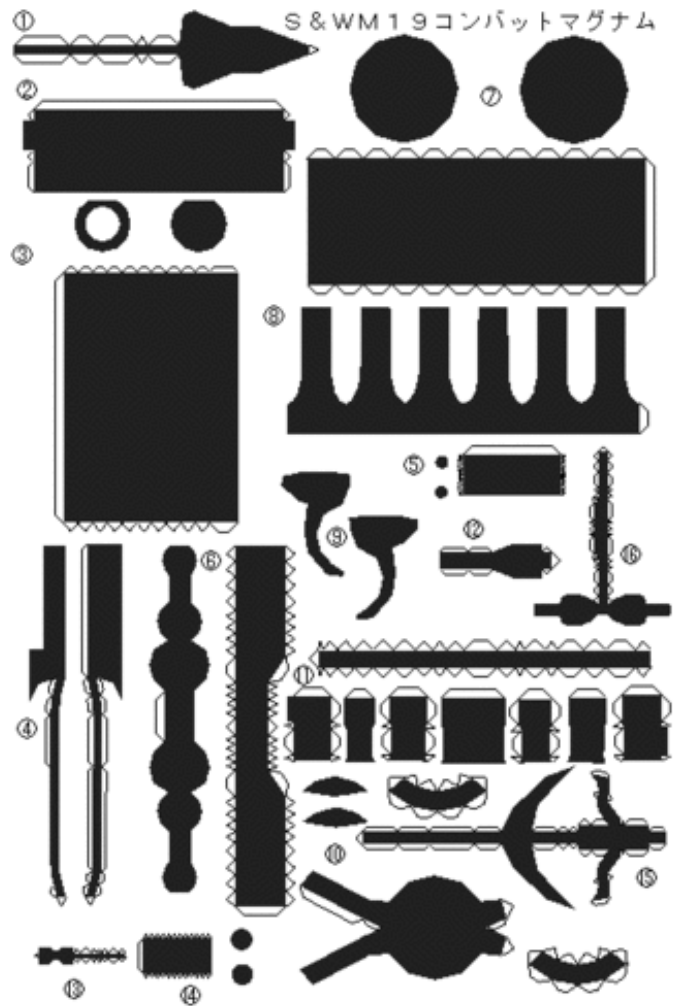

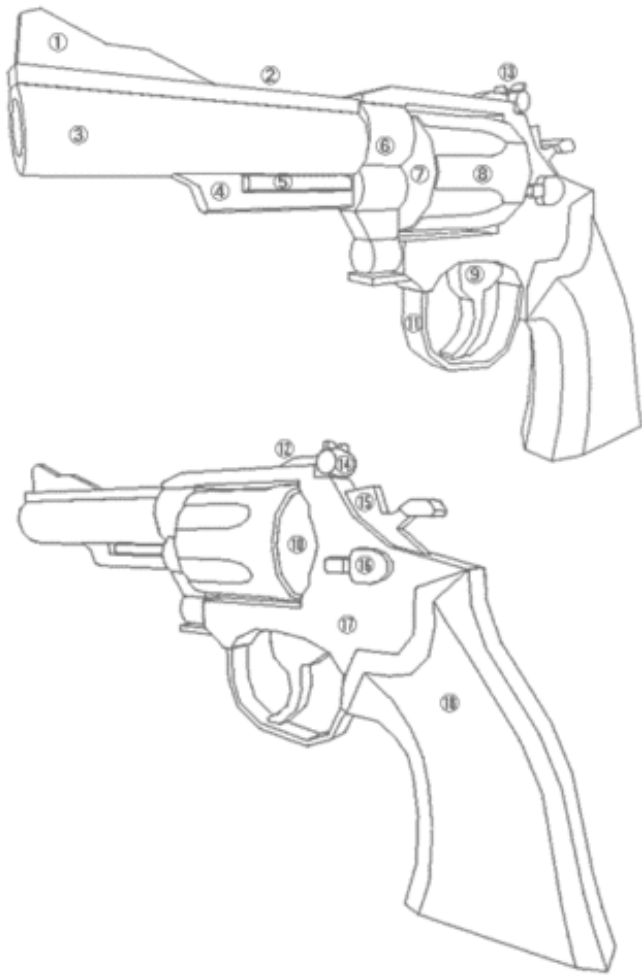

The instructions for the Smith & Wesson Model 19.

more information can be found [here](#) .

Note:

*I did **not** make this gun, and thus I take **no credit** for them. All I did was upload them here.*

Step 7: Walther PPK

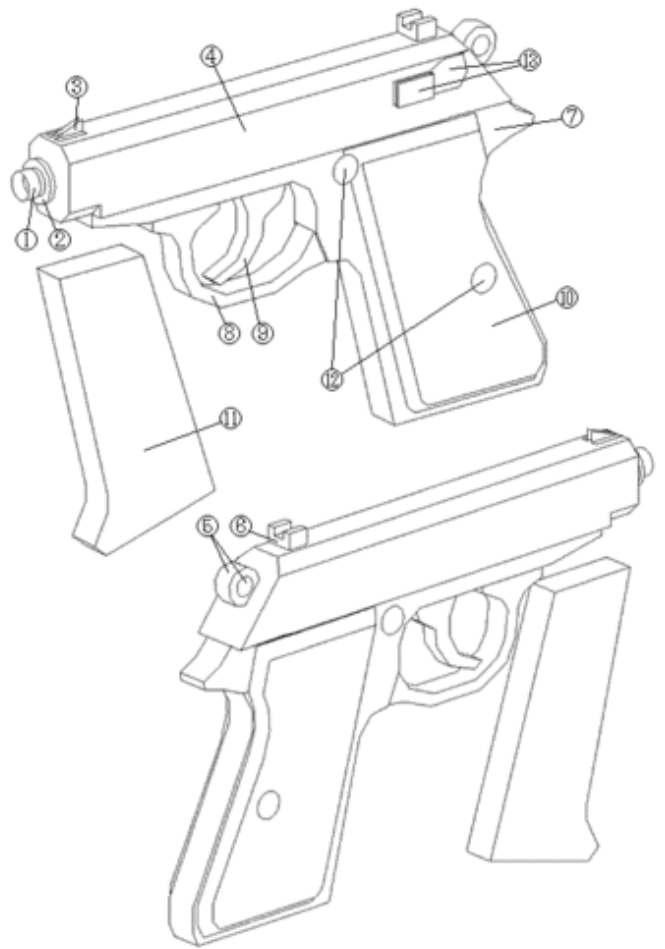

The instructions for the Walther PPK.

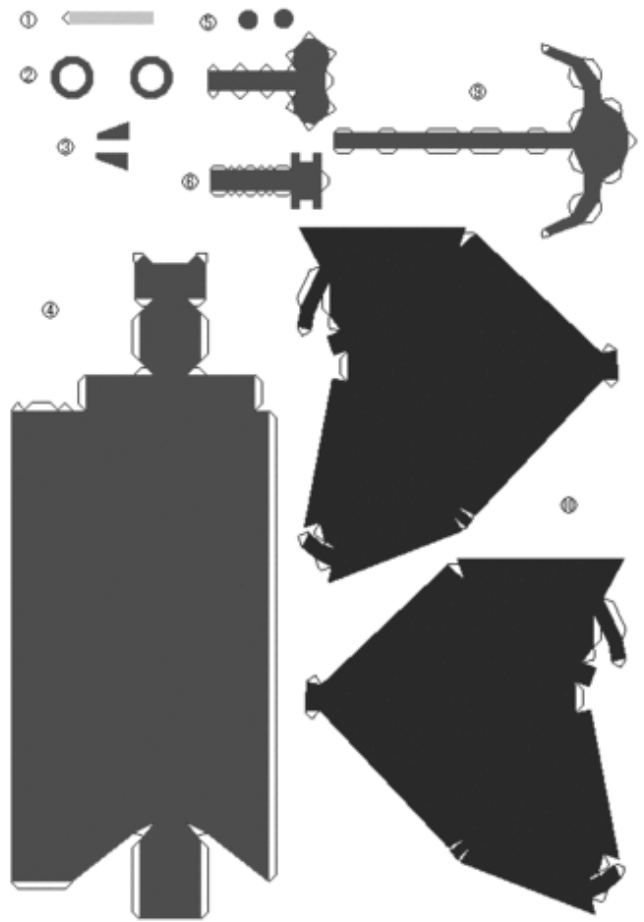

More information can be found [here](#).

Note:

*I did **not** make this gun, and thus I take **no credit** for them. All I did was upload them here.*

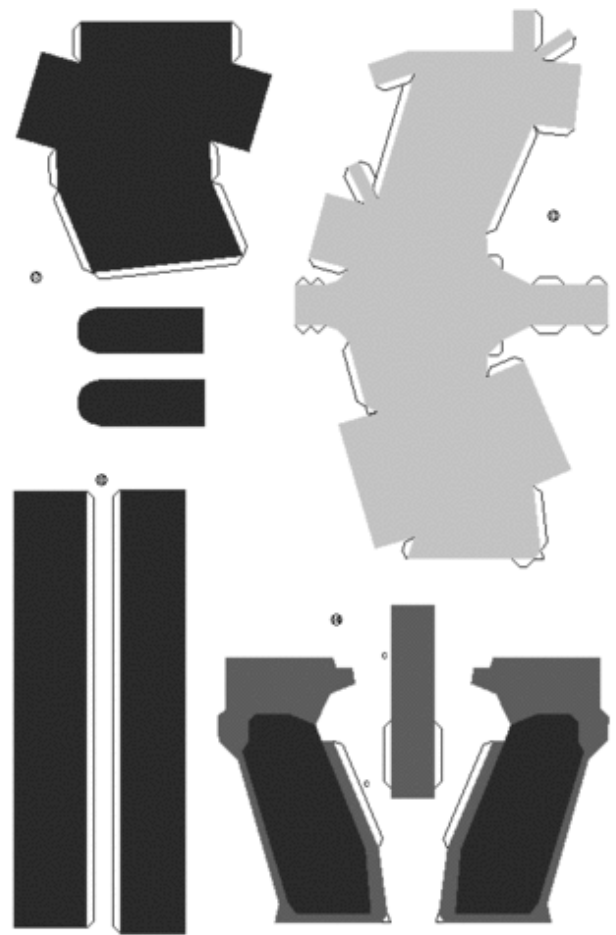

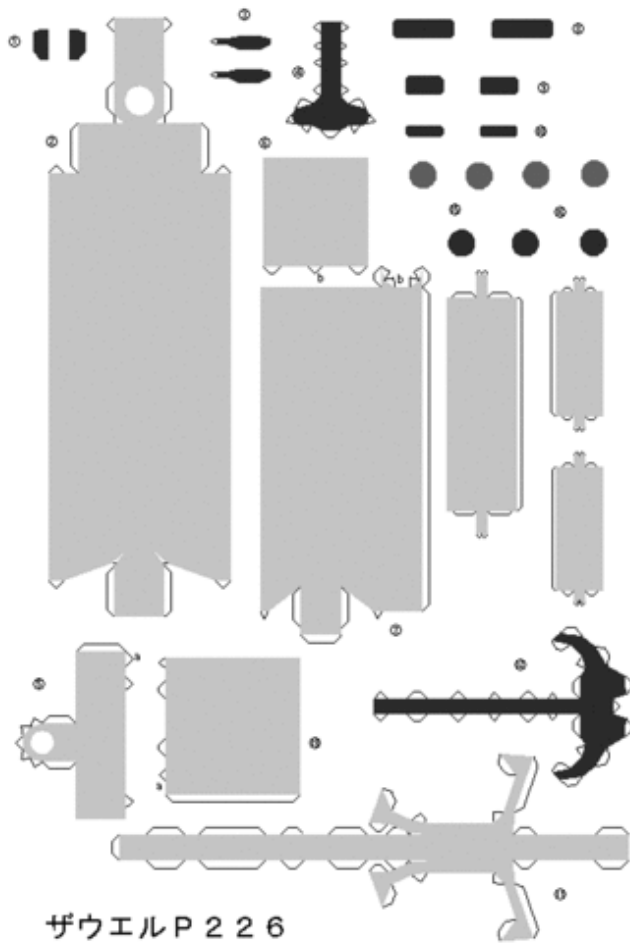

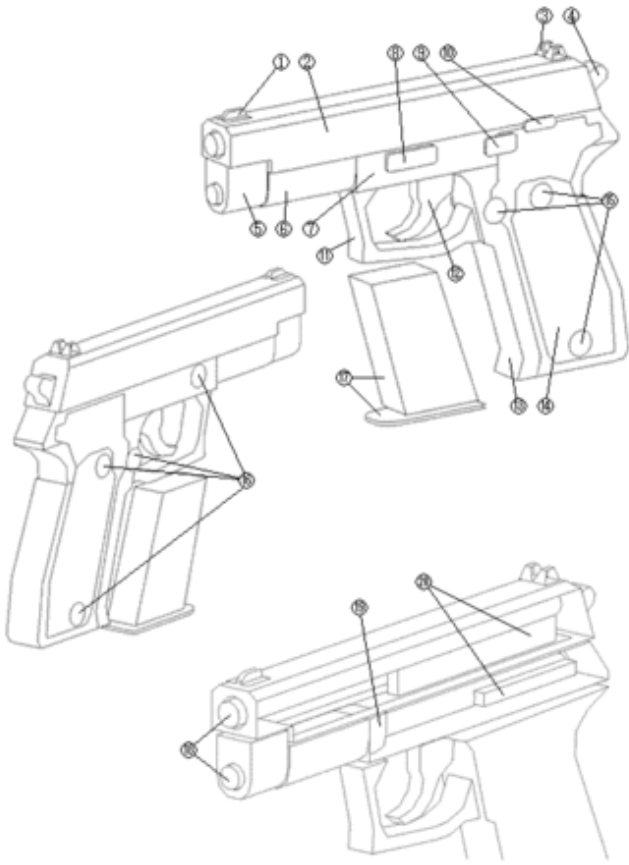

The instructions for the Sig Sauer P226.

Note:
I did **not** make this gun, and thus I take **no credit** for them. All I did was upload them here.

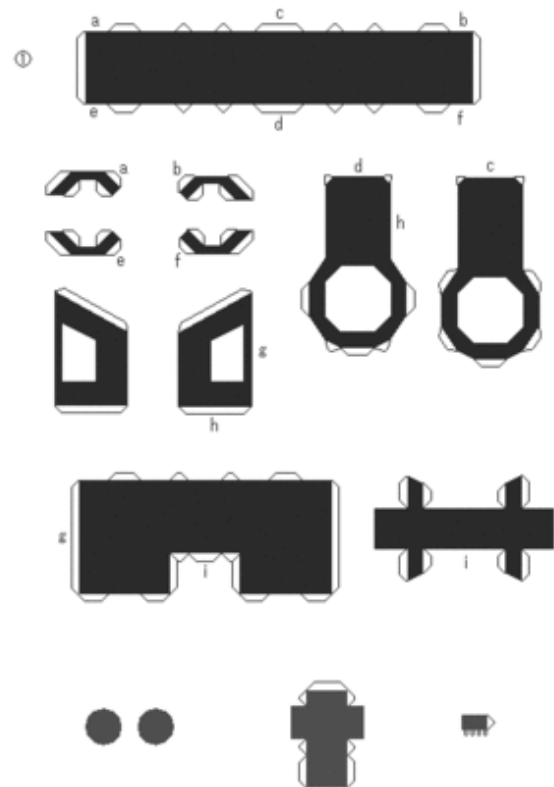

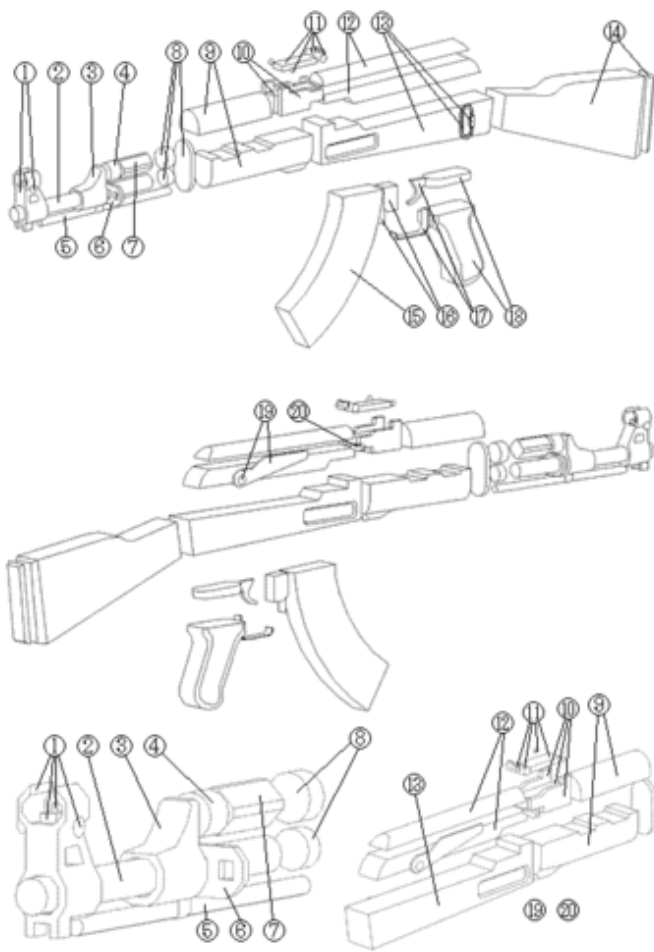

Step 9: Avtomat Kalashnikova model 1947 (AK-47)

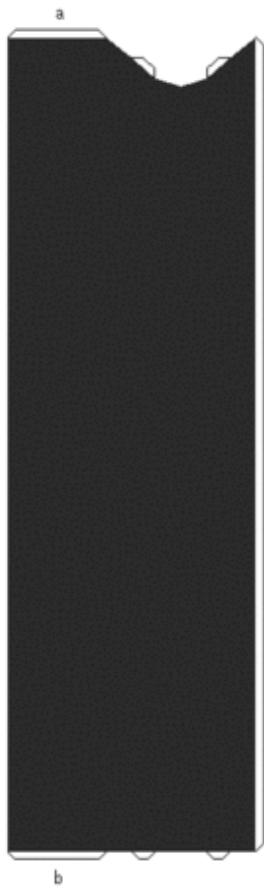

The instructions for the Avtomat Kalashnikova model 1947 (AK-47) more information can be found <http://en.wikipedia.org/wiki/AK-47> here].

Note:

*I did **not** make this gun, and thus I take **no credit** for them. All I did was upload them here.*

the magazines are not classified as normal - cap or hi - cap. it is only classified like that in airsoft.
for real guns, it is called just the mag, and the extended mag.....i think..... -_-

Jun 15, 2009. 6:43 PM [REPLY](#)

it's in japanese. i'm no jap either, but i just clicked my way around and found the instructions and templates for each gun.

weapontuts104 says:

Hey how do you get the templates?
because I can't seem to find them

Dec 15, 2009. 7:12 PM [REPLY](#)

Mr. Bricoleur says:

Ummm, yeah I looked just now and can't seem to find them either. Seems as if they changed the policies and the templates cost money, but then again it says that sales are discontinued... I guess we're out of luck now then. :(

Jan 2, 2010. 9:21 PM [REPLY](#)

Mr. Bricoleur says:

here's a more recent one (with more guns):
