

Anycubic Kobra S1 Combo User Manual

Dear Customer,

Thank you for choosing ANYCUBIC products.

Maybe you are familiar with 3D printing technology or have purchased **ANYCUBIC** printers before, but we still highly recommend that you read this manual carefully. The installation techniques and precautions in this manual can help you avoid any unnecessary damage or frustration.

Please visit https://support.anycubic.com/ to contact us if you have any question. You can also gain more information such as software, videos, models from the website.

Technical Specification

Printing

Technology: FDM (Fused Deposition Modeling) Build Size: 250 mm (L) × 250 mm (W) × 250mm (H)

Laver Thickness: 0.08 - 0.28mm

Positioning Accuracy: X / Y / Z 0.0125 / 0.0125 / 0.0008 mm

Extruder Quantity: Single Nozzle Diameter: 0.4 mm

Supported Materials: PLA/TPU/PETG/ABS/ASA

Software

Slicing Software: Anycubic Slicer Next/Orca Slicer Software Input Formats: .STL/.OBJ/.3mf

Software Output Formats: GCode

Connectivity: U-DISK, AC Cloud, Anycubic Slicer Next

Electrical

Power Input: 100-120V~/200-240V~ Rated Power: 325W/1300W

WIFI

Frequency Band: 2.4G (2.400-2.4835GHz) Working Mode: STA

Physical Dimensions

Printer Dimensions: 400mm (L) × 410mm (W) × 490 mm (H)

Net Weight: ~18kg

ACE Pro Dimensions: 365.9mm (L) × 282.8mm (W) × 234.5 mm (H)

ACE Pro Net Weight: ~4.6kg

Dimensions of Printer and ACE Pro Footprint:

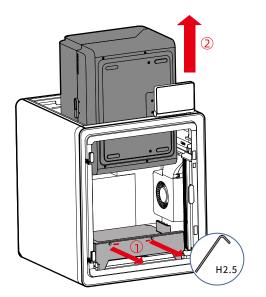

420mm (L) × 530mm (W) × 710 mm (H)

Machine Installation

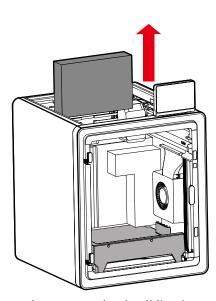

For the installation instruction video, please scan the QR code on the right.

Unlock ACE Pro

1. Open the printer cover, and use Allen Key H2.5 to remove the two screws marked in red as pictured.

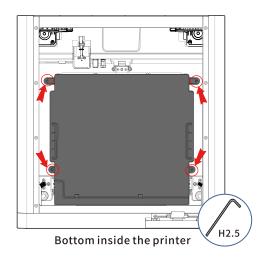

Take out the accessory box by sliding it out through the top.

2. After completing the above operations, take out the ACE Pro through the top.

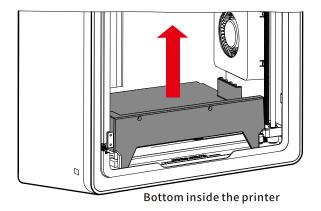

*It is enough to loosen the screws to a certain extent, there is no need to completely remove the screws.

Unlock ACE Pro

As shown by the arrows, use Allen Key H2.5 to remove the four screws marked in red circles.

*It is enough to loosen the screws to a certain extent, there is no need to completely remove the screws.

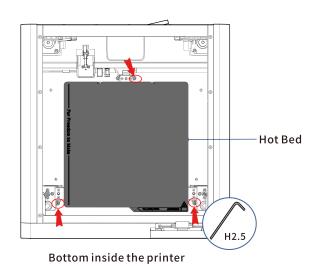

Take out the ACE Pro cushioning.

Unlock Printhead

Top of the printer

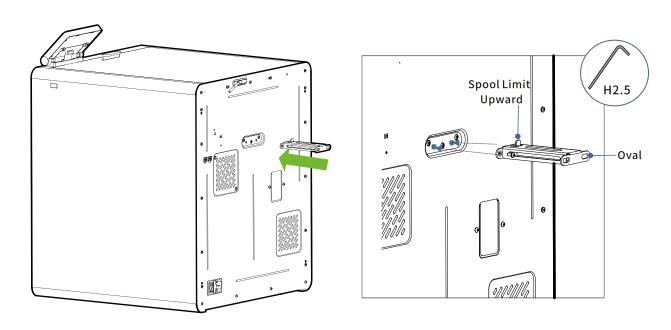

- $1. Cut \, the \, zip \, tie \, securing \, the \, printhead, \\ remove \, the \, cardboard \, from \, the \, printhead.$
- 2. Remove the foam.

Unlock Hot Bed

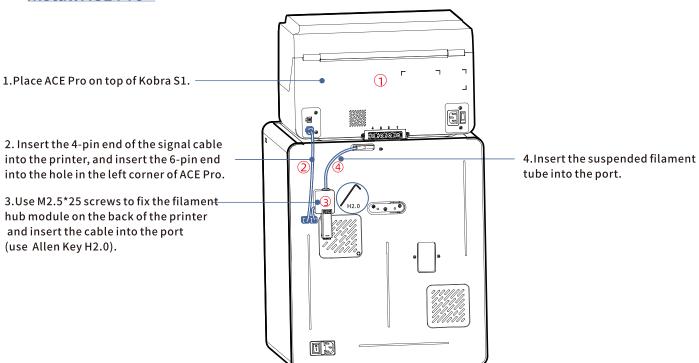

As shown by the arrows, use Allen Key H2.5 to remove the three screws marked in red circles.

Install Spool Holder (skip this step if printing in multiple colors)

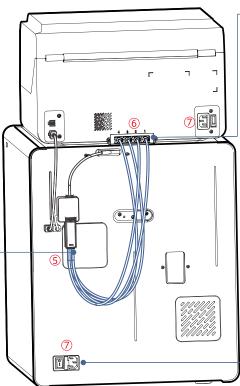

Install ACE Pro

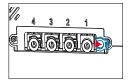

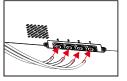

5.Insert all four teflon tubes into the filament hub.

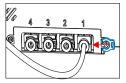

Note: Please enter the teflon tube to the end.

6. First, remove the four blue clips from the connection ports of the teflon tubes. Insert the teflon tubes into the ports, then reinstall the four blue clips back into their original positions (Note: teflon tubes are matched in no order).

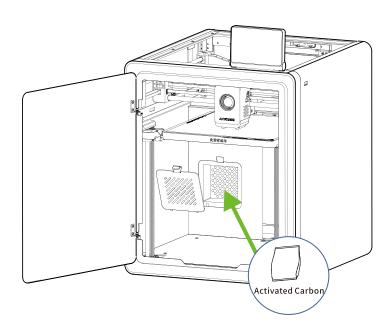

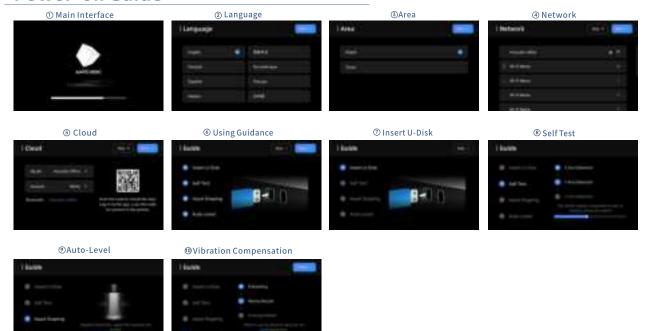

7. After completing the above operations, use the power cord to power the printer and ACE Pro.

Install Activated Carbon

Take out the activated carbon from the accessories box, and tear off the vacuum packaging, place it in the filter box inside the printer.

Power-on Guide

Note: The current interface is for reference only. Due to ongoing feature upgrades, please refer to the UI of the latest firmware release for accurate information.

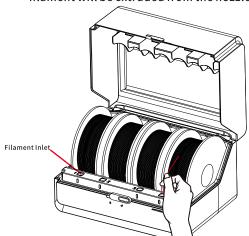

Loading Filament

- 1. Place at least one roll of filament in ACE Pro.
- 2. Insert the filament into the filament inlet, and ACE Pro will automatically pre-load the filament after detecting it.
- 3. Press the [Filament] interface, click to select a filament, select the corresponding material and color.

If you use Anycubic RFID filament, the filament color and material will be automatically identified.

4. After completing the above operations, click [Extrude], wait for the nozzle to heat to the preset temperature, and the

filament will be extruded from the nozzle.

Note: 1. Before inserting the filament into the filament inlet, make sure to straighten the end of the filament.

2. It is recommended to use plastic filament trays first to achieve better printing smoothness. If you use paper trays, the tray may slip and produce debris due to friction. It is recommended to use it with an adapter ring. (Please download the adapter ring from Makeronline)

First Print

Makeronline QR Code: Models can be downloaded via Makeronline

1) Select a model from the local or U-DISK and start printing.

*We recommend using one of the pre-loaded files as a first test print.

Print

Select the model from local storage or U-DISK.

Select color, press "Print". Color Match: Map the actual filaments to the print file preset filaments

Printing in progress

Note:

- 1. The built-in model is subject to reality.
- 2. Please use similar colors to match the preset, otherwise the flush setting might be inaccurate.
- 3. The printer will generate high temperatures when working.
- Please do not touch the hot bed and nozzles with your hands.

Printer Binding

- 1. Please connect the printer to the network first.
- 2. Scan the QR code on the printer screen, QR code path: [Settings]-[Network]-[Account], download the ANYCUBIC App, register and log in to the ANYCUBIC account.
- 3.Open ANYCUBIC App, click [+intiate printing], click [Scan], and scan the QR code on the printer screen to bind ANYCUBIC account.

Software Installation and Binding

1.Software Installation Procedure

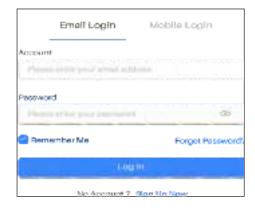

2. Please connect the printer to the network before performing the following operations.

3. Anyubic Slicer Usage Instruction:

Open the attached USB drive and navigate into the path: \Files_English_Anycubic Kobra S1 combo\Anycubic Slicer \Anycubic Slicer_Usage Instructions

1 After the software installation is completed, enter the main interface 2 If you already have an APP account, you can and click [Workbench] or [Login to begin remote print]. directly enter your account and password to log in. If not, click [Sign Up Now].

Software Installation and Binding

(3) Click [Add Printer].

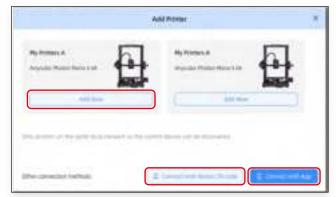

4 Automatically find printers on the same LAN as the current device. If the APP has been bound to the machine and logged in to the same account, the information will be automatically synchronized.

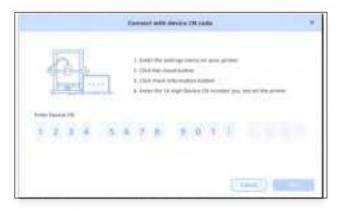

Software Installation and Binding

- (5) Select the machine that needs to be bound in the automatic search results and click [Add Now].

 Multiple printers can be connected; if the search is not successful, please click [Connect with device CN code] or [Connect with APP].
- 6 If the search fails, enter the CN code of the device to connect. Find the CN code path: select [Settings-Cloud Platform -Device Information-CN Code] on the printer.

Note:	١
The software interface is subject to the latest version.

Other Function Descriptions

Vibration Compensation: To achieve better printing results, it is recommended to perform a vibration compensation check after printing for more than 300 hours or when the machine has been moved. This feature helps reduce the occurrence of banding during high-speed printing. Regular vibration compensation checks help maintain the stability and accuracy of the printer, thereby improving print quality.

Press "Tools" - "Calibration" - "Vibration Compensation" and wait for the machine to complete the calibration. Please do not touch the machine during the calibration process.

Filament Runout Detection: This function is designed to prevent printing failures when the filament runs out during the middle of a print. It alerts the user to replace the filament before continuing the print, effectively preventing wasted prints due to filament shortage.

Power Loss Resume: When printing using the filament holder, in the event of a sudden power outage or accidentally turning off the machine, this function does not require manual setup. Simply reconnect the power and turn on the machine. You can then resume the print.

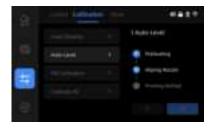

Leveling

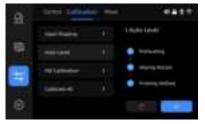

Press "Tools" - "Calibration" - "Auto Level". Wait for the machine to complete the leveling process.

Note:

Please check whether the PEI magnetic spring board is installed before leveling.

Attention

- 1. Anycubic 3D printer generates high temperature. DO NOT reach inside of the printer during operation. Contact with extruded materials may cause burns.
- 2. Use high temperature resistant gloves when operating the product.
- 3. This equipment is not suitable for use in locations where children are likely to be present.
- 4. The fuse rating for the printer is 250V 10A. Never replace the fuse with one of a higher amperage, otherwise it may cause fire.
- 5. The socket-outlet shall be easily accessible.

If the above problems cannot be solved, please initiate consultation in our after-sales service system, and our engineers will reply you in the form of email within one working day.

(https://support.anycubic.com/)

Warm tips:

- 1. Fill in the information based on the SN of the corresponding model. The items with red dots are mandatory.
- 2. If the order is successful, you will soon receive a reply from the after-sales service system in your mailbox.
- 3. If you successfully place an order but do not receive an email, please watch out for spam.
- 4. If the order creation fails, please pay attention to the pop-up reminder on the web page.
