FCC STATEMENT

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/ TV technician for help.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- 1) This device may not cause harmful interference.
- 2) This device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Note: The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. Such modifications could void the user's authority to operate the equipment.

FCC RF Radiation Exposure Statement

This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This device and its antenna must not be co-located or operating in conjunction with any other antenna or transmitter.

"To comply with FCC RF exposure compliance requirements, this grant is applicable to only Mobile Configurations. The antennas used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter."

CE Mark Warning

This is a class B product. In a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate measures.

RF Exposure Information

This device meets the EU requirements (1999/5/EC Article 3.1a) on the limitation of exposure of the general public to electromagnetic fields by way of health protection.

The device complies with RF specifications when the device is used at 20 cm from your body.

UkrSEPRO

Продукт сертифіковано згідно з правилами системи УкрСЕПРО на відповідність вимогам нормативних документів та вимогам, що передбачені чинними законодавчими актами України.

Safety Information

- When product has power button, the power button is one of the ways to shut off the product; when there is no power button, the only way to completely shut off power is to disconnect the product or the power adapter from the power source.
- Don't disassemble the product, or make repairs yourself. You run the risk of electric shock and voiding the limited warranty. If you need service, please contact us.
- Avoid water and wet locations.
-  Use only power supplies which are provided by manufacturer and in the original packing of this product. If you have any questions, please don't hesitate to contact us.

DECLARATION OF CONFORMITY

For the following equipment:

Product Description: 150Mbps Wireless N ADSL2+ Modem Router

Model No.: **TD-W8151N**

Trademark: **TP-LINK**

We declare under our own responsibility that the above product satisfies all the technical regulations applicable to the product within the scope of Council Directives:

Directive 1999/5/EC, Directive 2004/108/EC, Directive 2006/95/EC, Directive 2011/65/EU, Directive 2009 /125 /EC

The above product is in conformity with the following standards or other normative documents:

EN 300328 V1.9.1

EN 301489-1 V1.9.2 & EN 301489-17

EN 55022: 2010+AC: 2011

EN 55024: 2010

EN 60950-1: 2006 + A11: 2009 + A1: 2010 + A12: 2011 +A2: 2013

EN 50385: 2002

EN 50581: 2012

(EC) No 278/2009

(EC) No 1275/2008

(EU) No 801/2013

The product carries the CE Mark:

CE 1588

Person responsible for making this declaration:

Huang Jing

Chapter 1 Introduction

1.1 Product Overview

Thank you for choosing the **TD-W8151N 150Mbps Wireless N ADSL2+ Modem Router**. The device is designed to provide a simple and cost-effective ADSL Internet connection for a private Ethernet or IEEE 802.11n/ IEEE 802.11g/ IEEE 802.11b wireless network.

The TD-W8151N connects to an Ethernet LAN or computers via standard Ethernet ports. The ADSL connection is made using ordinary telephone line with standard connectors. Multiple workstations can be networked and connected to the Internet using a single Wide Area Network (WAN) interface and single global IP address. The advanced security enhancements, IP/MAC Filter, Application Filter and URL Filter can help to protect your network from potentially devastating intrusions by malicious agents from the outside of your network of the Web-based Utility is supplied and friendly help messages are provided for the configuration. Network and Router management is done through the Web-based Utility which can be accessed through local Ethernet using any web browser.

The TD-W8151N supports full-rate ADSL2+ connectivity conforming to the ITU and ANSI specifications. In addition to the basic DMT physical layer functions, the ADSL2+ PHY supports dual latency ADSL2+ framing (fast and interleaved) and the I.432 ATM Physical Layer.

In the most attentive wireless security, the Router provides multiple protection measures. It can be set to turn off the wireless network name (SSID) broadcast so that only stations that have the SSID can be connected. The Router provides wireless LAN 64/128-bit WEP encryption security, WPA-PSK/WPA2-PSK authentication, as well as TKIP/AES encryption security.

1.2 Main Features

- One 10/100Mbps Auto-Negotiation RJ45 LAN port (Auto MDI/MDIX), one RJ11 port.
- Provides external splitter.
- Adopts Advanced DMT modulation and demodulation technology.
- Supports bridge mode and Router function.
- Multi-user sharing a high-speed Internet connection.
- Downstream data rates up to 24Mbps, upstream data rates up to 2.5Mbps (With Annex M enabled).
- Supports long transfers, the max line length can reach to 6.5Km.
- Supports remote configuration and management through SNMP and CWMP.
- Supports PPPoE, it allows connecting the internet on demand and disconnecting from the Internet when idle.
- Provides reliable ESD and surge-protect function with quick response semi-conductive surge protection circuit.
- High speed and asymmetrical data transmit mode, provides safe and exclusive bandwidth.
- Supports All ADSL industrial standards.
- Compatible with all mainstream DSLAM (CO).
- Provides integrated access of internet and route function which face to SOHO user.

- Real-time Configuration and device monitoring.
- Supports Multiple PVC (Permanent Virtual Circuit).
- Built-in DHCP server.
- Built-in firewall, supporting IP/MAC filter, Application filter and URL filter.
- Supports Virtual Server, DMZ host and IP Address Mapping.
- Supports Dynamic DNS, UPnP and Static Routing.
- Supports system log and flow Statistics.
- Supports firmware upgrade and Web management.
- Provides WPA-PSK/WPA2-PSK data security, TKIP/AES encryption security.
- Provides 64/128-bit WEP encryption security and wireless LAN ACL (Access Control List).
- Supports IPv6.

1.3 Conventions

The Router or device mentioned in this User guide stands for TD-W8151N 150Mbps Wireless N ADSL2+ Modem Router without any explanations.

Parameters provided in the pictures are just references for setting up the product, which may differ from the actual situation.

Chapter 2 Hardware Installation

2.1 The Front Panel

Figure 2-1

The LEDs located on the front panel indicates the device's working status. For details, please refer to LED Explanation.

LED Explanation:

Name	Status	Indication
 (Power)	On	The modem router is powered on.
	Off	The modem router is off. Please ensure that the power adapter is connected correctly.
 (ADSL)	On	ADSL line is synchronized and ready to use.
	Flash	The ADSL negotiation is in progress.
	Off	ADSL synchronization fails. Please refer to Note 1 for troubleshooting.
 (Internet)	On	The network is available with a successful Internet connection.
	Flash	There is data being transmitted or received via the Internet.
	Off	There is no successful Internet connection or the modem router is operating in Bridge mode. Please refer to Note 2 for troubleshooting.
 (WLAN)	On	Wireless is enabled but no data is being transmitted.
	Off	Wireless function is disabled.
 (WPS)	On	A wireless device has been successfully added to the network by WPS function.
	Flash	WPS handshaking is in process and will continue for about 2 minutes. Please press the WPS button on other wireless devices that you want to add to the network while the LED is flashing.
	Off	The WPS function is disabled or the wireless device fails to be added to the network in 2 minutes after WPS function is enabled. Please refer to WPS Settings for more information.
 (LAN)	On	There is a device connected to this LAN port.
	Flash	The modem router is sending or receiving data over this LAN port.
	Off	There is no device connected to this LAN port.

Note:

1. If the ADSL LED is off, please check your Internet connection first. Refer to [2.4 Connecting the Modem Router](#) for more information about how to make Internet connection correctly. If you have already made a right connection, please contact your ISP to make sure if your Internet service is available now.

2. If the Internet LED is off, please check your ADSL LED first. If your ADSL LED is also off, please refer to **Note 1**. If your ADSL LED is GREEN ON, please check your Internet configuration. You may need to check this part of information with your ISP and make sure everything have been input correctly. Refer to [4.1.1 Device Info](#) and [4.3.1 Internet](#) for more information.

2.2 The Back Panel

Figure 2-2

- **ON/OFF:** The switch for the Router.
- **POWER:** The Power plug is where you will connect the power adapter.
- **WiFi:** Press this button to enable or disable Wireless LAN interface.
- **WPS/RESET:** The switch for the WPS function. If your client devices, such as wireless adapters, support Wi-Fi Protected Setup, then you can press this button for about two seconds to quickly establish a connection between the router and client devices and automatically configure wireless security for your wireless network. For details, please refer to [WPS Settings](#). If you press this button for more than 8 seconds, you will enable the RESET function. There are two ways to reset the modem router's factory defaults.
Method one: With the Router powered on, use a pin to press and hold the Reset button for at least 5 seconds. And the Router will reboot to its factory default settings.
Method two: Restore the default setting from “Maintenance-SysRestart” of the Router's Web-based Utility.
- **LAN:** Through the port, you can connect the Router to your PC or the other Ethernet network devices.
- **ADSL:** Through the port, you can connect the Router with the telephone. Or you can connect them by an external separate splitter. For details, please refer to [“2.4 Connecting the Modem Router”](#).
- **Antenna:** Used for wireless operation and data transmit.

2.3 Installation Environment

- The Product should not be located where it will be exposed to moisture or excessive heat.

- Place the Router in a location where it can be connected to the various devices as well as to a power source.
- Make sure the cables and power cord are placed safely out of the way so they do not create a tripping hazard.
- The Router can be placed on a shelf or desktop.
- Keep away from the strong electromagnetic radiation and the device of electromagnetic sensitive.

Generally, TD-W8151N is placed on a horizontal surface. The device also can be mounted on the wall as shown in Figure 2-3.

Figure 2-3

 Note:

The diameter of the screw, $3.5\text{mm} < D < 8\text{mm}$, and the distance of two screws is 99.2mm. The screw that project from the wall need around 4mm based, and the length of the screw need to be at least 20mm to withstand the weight of the product.

2.4 Connecting the Modem Router

Before installing the device, please make sure your broadband service provided by your ISP is available. If there is any problem, please contact your ISP. Before cable connection, cut off the power supply and keep your hands dry. You can follow the steps below to install it.

Step 1: Connect the ADSL Line.

Method one: Plug one end of the twisted-pair ADSL cable into the ADSL port on the rear panel of TD-W8151N, and insert the other end into the wall socket.

Method two: You can use a separate splitter. External splitter can divide the data and voice, and then you can access the Internet and make calls at the same time. The external splitter has three ports:

- LINE: Connect to the wall jack
- PHONE: Connect to the phone sets

- MODEM: Connect to the ADSL LINE port of TD-W8151N

Plug one end of the twisted-pair ADSL cable into the ADSL port on the rear panel of TD-W8151N. Connect the other end to the MODEM port of the external splitter.

Step 2: Connect the Ethernet cable. Attach one end of a network cable to your computer's Ethernet port or a regular hub/switch port, and the other end to the LAN port on the TD-W8151N.

Step 3: Power on the computers and LAN devices.

Step 4: Attach the power adapter. Connect the power adapter to the power connector on the rear of the device and plug in the adapter to an electrical outlet or power extension. The electrical outlet shall be installed near the device and shall be easily accessible.

Figure 2-4

Chapter 3 Quick Installation Guide

3.1 TCP/IP Configuration

The default IP address of the TD-W8151N 150Mbps Wireless N ADSL2+ Modem Router is 192.168.1.1. And the default Subnet Mask is 255.255.255.0. These values can be changed as you desire. In this guide, we use all the default values for description.

Connect the local PC to the LAN port of the Modem Router. And then you can configure the IP address for your PC by the following way:

- 1) Set up the TCP/IP Protocol in "**Obtain an IP address automatically**" mode on your PC.
If you need instructions as to how to do this, please refer to **T3** in [Appendix B: Troubleshooting](#).
- 2) Then the built-in DHCP server will assign IP address for the PC.

Now, you can run the Ping command in the command prompt to verify the network connection. Please click the **Start** menu on your desktop, select **run** tab, type **cmd or command** in the field and press **Enter**. Type **ping 192.168.1.1** on the next screen, and then press **Enter**.

If the result displayed is similar to the screen below, the connection between your PC and the modem router has been established.

```
Pinging 192.168.1.1 with 32 bytes of data:

Reply from 192.168.1.1: bytes=32 time<1ms TTL=64
Reply from 192.168.1.1: bytes=32 time<1ms TTL=64
Reply from 192.168.1.1: bytes=32 time<1ms TTL=64
Reply from 192.168.1.1: bytes=32 time<1ms TTL=64

Ping statistics for 192.168.1.1:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 0ms, Average = 0ms
```

Figure 3-1

If the result displayed is similar to the screen shown below, it means that your PC has not connected to the modem router.

```
Pinging 192.168.1.1 with 32 bytes of data:

Request timed out.
Request timed out.
Request timed out.
Request timed out.

Ping statistics for 192.168.1.1:
    Packets: Sent = 4, Received = 0, Lost = 4 (100% loss),
```

Figure 3-2

You can check it follow the steps below:

1) Is the connection between your PC and the modem router correct?

The LEDs of LAN port which you link to the device and the LEDs on your PC's adapter should be lit.

2) Is the TCP/IP configuration for your PC correct?

If the modem router's IP address is 192.168.1.1, your PC's IP address must be within the range of 192.168.1.2 ~ 192.168.1.254.

3.2 Login

Once your host PC is properly configured, please proceed as follows to use the Web-based Utility: Launch your web browser and enter **http://tplinkmodem.net** or **192.168.1.1** in the address bar.

A screenshot of a web browser's address bar. The text 'http://tplinkmodem.net' is entered. To the left of the text is the word 'Address' in a smaller font. To the right of the text is a blue downward-pointing arrow icon.

After that, you will see the screen shown below. Enter the default Username **admin** and the default Password **admin**, and then click **Login** to access to the **Quick Start** screen. You can follow the steps below to complete the Quick Setup.

A screenshot of the login page for the TP-LINK modem router. It features two input fields: 'Username:' with 'admin' entered, and 'Password:' with five dots. Below these fields is an orange 'Login' button. At the bottom, there is a copyright notice: 'Copyright © 2015 TP-LINK Technologies Co., Ltd. All rights reserved.'

Figure 3-3

Step 1: Select the **Quick Start** tab, then click **RUN WIZARD**, and you will see the next screen. Click the **NEXT** button.

A screenshot of the 'Quick Start' screen. The title 'Quick Start' is at the top. Below it, a message states: 'This ADSL2+ Modem Router has been configured. If you want to modify your first time Internet configuration, please click NEXT button, or click SKIP button to enter the advanced setup webpage.' At the bottom right, there are two buttons: 'NEXT' and 'SKIP'.

Figure 3-4

Step 2: Configure the time for the Router, and then click the **NEXT** button.

Quick Start - Time Zone

Select the appropriate time zone for your location and click **NEXT** to continue.

(GMT) Greenwich Mean Time : Dublin, Edinburgh, London, Lisbon ▼

BACK NEXT EXIT

Figure 3-5

Step 3: Select your country and ISP, and select your ISP Connection type (Here we take **PPPoE/PPPoA** mode for example), and complete the corresponding settings with the information provided by your ISP, then click the **NEXT** button.

Quick Start - Internet Settings

You can select your country and ISP to quickly configure the Internet settings.

Country: Other ▼

ISP: Other ▼

ISP Connection Type: PPPoE/PPPoA ▼

Username:

Password:

VPI: 8 (0~255)

VCI: 35 (32~65535)

Connection Type: PPPoE LLC ▼

BACK NEXT EXIT

Figure 3-6

 Note:

Per FCC regulations, all Wi-Fi products marketed in the U.S. must be fixed to the U.S. region only.

Step 4: After finishing the **Internet Settings**, configure the rules for the WLAN, and click **NEXT**.

Quick Start - Wlan

You may enable/disable Wlan, change the Wlan SSID and Authentication type in this page. Click **NEXT** to continue.

Access Point : ☒ Activated ☐ Deactivated

SSID :

Broadcast SSID : ☒ Yes ☐ No

Authentication Type :

Encryption :

Pre-Shared Key : (8~63
ASCII characters or 64 hexadecimal characters)

BACK **NEXT** **EXIT**

Figure 3-7

 Note:

If the Access Point is activated, the wireless function will be available even without the external antenna because of an additional printed antenna. To adopt the wireless security protection measures, please refer to [4.3.3 Wireless](#).

Step 5: Click **SAVE** to save the current settings.

Quick Start Complete !!

The Setup Wizard has completed. Click on **BACK** to modify changes or mistakes. Click **SAVE** to save the current settings.

BACK **SAVE** **EXIT**

Figure 3-8

Chapter 4 Software Configuration

This User Guide recommends using the “Quick Installation Guide” for first-time installation. For advanced users, if you want to know more about this device and make use of its functions adequately, maybe you will get help from this chapter to configure the advanced settings through the Web-based Utility.

After your successful login, you can configure and manage the device. There are main menus on the top of the Web-based Utility; submenus will be available after you click one of the main menus. On the center of the Web-based Utility, there are the detailed configurations or status information. To apply any settings you have altered on the page, please click the **SAVE** button.

4.1 Status

Choose “**Status**”, you can see the next submenus: **Device Info**, **System Log** and **Statistics**. Click any of them, and you will be able to configure the corresponding function.

Quick Start	Interface Setup	Advanced Setup	Access Management	Maintenance	Status	Help
Device Info	System Log	Statistics				

Figure 4-1

Click any of them, and you will be able to view the corresponding information.

4.1.1 Device Info

Choose “**Status→Device Info**” menu, and you will be able to view the device information, including LAN, WAN and ADSL. The information will vary depending on the settings of the Router configured on the Interface Setup screen.

Figure 4-2

 Note:

Click the other submenus **System Log** or **Statistics** in Figure 4-2, and you will be able to view the system log and traffic statistics about the Router.

4.1.2 System Log

Choose “**Status**→**System Log**” menu, and you will be able to query the logs of the Router.

Figure 4-3

The Router can keep logs of all traffic. You can query the logs to find what happened to the Router.

Click the **CLEAR LOG** button to clear the logs.

Click the **SAVE LOG** button to save the logs.

4.1.3 Statistics

Choose “**Status**→**Statistics**” menu, and you will be able to view the network traffic over Ethernet, ADSL and WLAN.

Figure 4-4

- **Interface:** You can select **Ethernet**, **ADSL** and **WLAN** to view the corresponding network traffic over different ports.
- Select **Ethernet**, and you will see the statistics table as below.

Interface : ☒ Ethernet ☐ ADSL ☐ WLAN

Transmit Statistics		Receive Statistics	
Transmit Frames	3,556	Receive Frames	2,475
Transmit Multicast Frames	1,073	Receive Multicast Frames	85,851
Transmit total Bytes	1,371,837	Receive total Bytes	13,455,362
Transmit Collision	0	Receive CRC Errors	0
Transmit Error Frames	0	Receive Under-size Frames	0

Statistics Table:

Transmit Statistics	Transmit Frames	The frames transmitted over the Ethernet port.
	Transmit Multicast Frames	The multicast frames transmitted over the Ethernet port.
	Transmit total Bytes	The total bytes transmitted over the Ethernet port.
	Transmit Collision	The collision occurred over the Ethernet port when data is being transmitted.
	Transmit Error Frames	The error frames over the Ethernet port when data is being transmitted.
Receive Statistics	Receive Frames	The frames received over the Ethernet port.
	Receive Multicast Frames	The multicast frames received over the Ethernet port.
	Receive total Bytes	The total bytes received over the Ethernet port.
	Receive CRC Errors	The CRC errors occurred over the Ethernet port when data is being received.
	Receive Under-size Frames	The Under-size frames received over the Ethernet port.

- Select **ADSL**, and you will see the statistics table as below.

Interface : ☐ Ethernet ☒ ADSL ☐ WLAN			
Transmit Statistics		Receive Statistics	
Transmit total PDUs	0	Receive total PDUs	0
Transmit total Error Counts	0	Receive total Error Counts	0

Statistics Table:

Transmit Statistics	Transmit total PDUs	The total PDUs transmitted over the ADSL port.
	Transmit total Error Counts	The total errors occurred over the ADSL port when data is being transmitted.
Receive Statistics	Receive total PDUs	The total PDUs transmitted over the ADSL port.
	Receive total Error Counts	The total errors occurred over the ADSL port when data is being received.

- Select **WLAN**, and you will see the statistics table as below.

Interface : ☐ Ethernet ☐ ADSL ☒ WLAN			
Transmit Statistics		Receive Statistics	
Tx Frames Count	13,185	Rx Frames Count	975,471
Tx Errors Count	0	Rx Errors Count	534,641
Tx Drops Count	0	Rx Drops Count	534,641

Statistics Table:

Transmit Statistics	Tx Frames Count	The frames transmitted over the WLAN when wireless data is being transmitted.
	Tx Errors Count	The errors occurred over the WLAN when wireless data is being transmitted.
	Tx Drops Count	The drops occurred over the WLAN when wireless data is being transmitted.
Receive Statistics	Rx Frames Count	The frames received over the WLAN when wireless data is being transmitted.
	Rx Errors Count	The errors occurred over the WLAN when wireless data is being received.
	Rx Drops Count	The drops occurred over the WLAN when wireless data is being received.

Click the **REFRESH** button to refresh immediately.

4.2 Quick Start

Please refer to ["3.2 Login"](#).

4.3 Interface Setup

Choose **"Interface Setup"**, you can see the next submenus: **Internet** and **LAN** and **Wireless**.

Quick Start	Interface Setup	Advanced Setup	Access Management	Maintenance	Status	Help
Internet	LAN	Wireless	6RD			

Figure 4-5

Click any of them, and you will be able to configure the corresponding function.

4.3.1 Internet

Choose “**Interface Setup**→**Internet**” menu, you can configure the parameters for WAN ports in the next screen (shown in Figure 4-6).

Interface	Quick Start	Interface Setup	Advanced Setup	Access Management	Maintenance	Status	Help
	Internet	LAN	Wireless	6RD			
ATM VC							
	Virtual Circuit : PVC0 PVCs Summary

	SAVE DELETE						

Figure 4-6

- **ATM VC:** ATM settings are used to connect to your ISP. Your ISP provides VPI (Virtual Path Identifier), VCI (Virtual Channel Identifier) settings to you. In this Device, you can totally setup 8 VCs on different encapsulations, if you apply 8 different virtual circuits from your ISP. You need to activate the VC to take effect. For PVCs management, you can use ATM QoS to setup each PVC traffic line's priority.

- **Virtual Circuit:** Select the VC number you want to setup, PVC0~PVC7.

- **Status:** If you want to use a designed VC, you should activate it.
- **VPI:** Identifies the virtual path between endpoints in an ATM network. The valid range is from 0 to 255. Please input the value provided by your ISP.
- **VCI:** Identifies the virtual channel endpoints in an ATM network. The valid range is from 32 to 65535 (1 to 31 is reserved for well-known protocols). Please input the value provided by your ISP.
- **PVCs Summary:** Click the button, and you can view the summary information about the PVCs.
- **ATM QoS:** Select the Quality of Service types for this Virtual Circuit, including CBR (Constant Bit Rate), UBR (Unspecified Bit Rate) and VBR (Variable Bit Rate). These QoS types are all controlled by the parameters specified below, including PCR (Peak Cell Rate), SCR (Sustained Cell Rate) and MBS (Maximum Burst Size), please configure them according your needs.

4.3.1.1 IPv4

There are two IP versions: IPv4 and IPv6. If you select IPv4 as IP version, please follow the configuration below to configure the parameters for WAN ports.

- **Encapsulation:** There are four connection types: Dynamic IP Address, Static IP Address, PPPoA/PPPoE and Bridge Mode. Please choose the designed type that you want to use. After that, you should follow the configuration below to proceed.

1) Dynamic IP Address

Select this option if your ISP provides you an IP address automatically. This option is typically used for Cable services. Please enter the Dynamic IP information accordingly.

IPv4/IPv6	IP Version : ☒ IPv4 ☐ IPv4/IPv6 ☐ IPv6	
Encapsulation	ISP : ☒ Dynamic IP Address ☐ Static IP Address ☐ PPPoA/PPPoE ☐ Bridge Mode	
Dynamic IP	Encapsulation : 1483 Bridged IP LLC Bridge Interface : ☐ Activated ☒ Deactivated Default Route : ☒ Yes ☐ No TCP MTU Option : TCP MTU(default:1500) 1500 bytes	
IPv4 Address	NAT : Enable Dynamic Route : RIP2-B Direction : Both Multicast : IGMP v2	

Figure 4-7

- **Encapsulation:** Select the encapsulation mode for the Dynamic IP Address, you can leave it default.

- **Bridge Interface:** Activate the option, the modem router can also work in Bridge mode.
- **Default Route:** If enable this function, the current PVC will be considered as the default gateway to Internet from this device.
- **TCP MTU Option:** Enter the TCP MTU as your desire. The default value is 1500.
- **IPv4 Address:** If you select IPv4 as IP version, you should configure the following.
- **NAT:** Select this option to Enable/Disable the NAT (Network Address Translation) function for this VC. The NAT function can be activated or deactivated per PVC basis.
- **Dynamic Route:** Select this option to specify the RIP (Routing Information protocol) version for WAN interface, including **RIP1**, **RIP2-B** and **RIP2-M**. RIP2-B and RIP2-M are both sent in RIP2 format, the difference is that RIP2-M using Multicast, while RIP2-B using Broadcast format.
- **Direction:** Select this option to specify the RIP direction. **None** is for disabling the RIP function. **Both** means the ADSL modem router will periodically send routing information and accept routing information, and then incorporate them into routing table. **IN only** means the ADSL modem router will only accept but will not send RIP packet. **OUT only** means the ADSL modem router will only send but will not accept RIP packet.
- **Multicast:** Select IGMP version, or disable the function. IGMP (Internet Group Multicast Protocol) is a session-layer protocol used to establish membership in a multicast group. The ADSL ATU-R supports IGMP version 1 (**IGMP v1**), IGMP version 2 (**IGMP v2**) and IGMP version 3 (**IGMP v3**). Select "Disabled" to disable it.

2) Static IP Address

Select this option if your ISP provides static IP information for you. You should set static IP address, IP Subnet Mask, and Gateway address in the screen below (shown in Figure 4-8).

IPv4/IPv6	IP Version : ☒ IPv4 ☐ IPv4/IPv6 ☐ IPv6
Encapsulation	ISP : ☐ Dynamic IP Address ☒ Static IP Address ☐ PPPoA/PPPoE ☐ Bridge Mode
Static IP	
IP Common Options	Encapsulation : 1483 Bridged IP LLC Bridge Interface : ☐ Activated ☒ Deactivated Default Route : ☒ Yes ☐ No TCP MTU Option : TCP MTU(default:1500) 1500 bytes
IPv4 Options	Static IP Address : 0.0.0.0 IP Subnet Mask : 0.0.0.0 Gateway : 0.0.0.0 NAT : Enable Dynamic Route : RIP2-B Direction : Both Multicast : IGMP v2

Figure 4-8

 Note:

Each IP address entered in the fields must be in the appropriate IP form, which is four IP octets separated by a dot (x.x.x.x), such as 192.168.1.100. The modem router will not accept the IP address if it is not in this format.

3) PPPoA/PPPoE

Select this option if your ISP requires you to use a PPPoE connection. This option is typically used for DSL services. Select Dynamic PPPoE to obtain an IP address automatically for your PPPoE connection. Select Static PPPoE to use a static IP address for your PPPoE connection. Please enter the information accordingly.

IPv4/IPv6	IP Version : ☒ IPv4 ☐ IPv4/IPv6 ☐ IPv6
Encapsulation	ISP : ☐ Dynamic IP Address ☐ Static IP Address ☒ PPPoA/PPPoE ☐ Bridge Mode
PPPoE/PPPoA	Servicename : Username : Password : Encapsulation : PPPoE LLC Bridge Interface : ☐ Activated ☒ Deactivated
Connection Setting	Connection : ☒ Always On (Recommended) ☐ Connect On-Demand (Close if idle for 0 minutes) ☐ Connect Manually TCP MSS Option : TCP MSS(default:1400) 1400 bytes
IP Common Options	Default Route : ☒ Yes ☐ No
IPv4 Address	Get IP Address : ☐ Static ☒ Dynamic Static IP Address : 0.0.0.0 IP Subnet Mask : 0.0.0.0 Gateway : 0.0.0.0 TCP MTU Option : TCP MTU(default:1480) 1480 bytes NAT : Enable Dynamic Route : RIP2-B Direction : Both Multicast : IGMP v2

Figure 4-9

- **Service name:** Specify a name for the PPPoA/PPPoE connection for recognition.
- **Username:** Enter your username for your PPPoA/PPPoE connection to identify and verify your account to the ISP.
- **Password:** Enter your password for your PPPoA/PPPoE connection.
- **Encapsulation:** For both PPPoA/PPPoE connection, you need to specify the type of Multiplexing, either LLC or VC Mux.
- **Bridge Interface:** Activate the option, the modem router can also work in Bridge mode.
- **Connection:** For PPPoA/PPPoE connection, you can select **Always on** or **Connect on-Demand** or **Connect Manually**. Connect on demand is dependent on the traffic. If there is no traffic (or **Idle**) for a pre-specified period of time, the connection will drop down automatically. And once there is traffic send or receive, the connection will be automatically on.
- **Default Route:** You should select **Yes** to configure the PVC as the default gateway to Internet from this device.
- **Static/Dynamic IP Address:** For PPPoA/PPPoE connection, you need to specify the public IP address for this ADSL modem router. The IP address can be either dynamically (via DHCP) or given by your ISP. For Static IP, you need to specify the IP address, Subnet Mask and Gateway IP address.

4) Bridge Mode

If you select this type of connection, the modem router can be configured to act as a bridging device between your LAN and your ISP. Bridges are devices that enable two or more networks to communicate as if they are two segments of the same physical LAN.

IPv4/IPv6	IP Version : ☒ IPv4 ☐ IPv4/IPv6 ☐ IPv6
Encapsulation	ISP : ☐ Dynamic IP Address ☐ Static IP Address ☐ PPPoA/PPPoE ☒ Bridge Mode
Bridge Mode	Encapsulation : 1483 Bridged IP LLC ▼

Figure 4-10

Note:

After you finish the Internet configuration, please click **SAVE** to make the settings take effect.

4.3.1.2 IPv6

There are two IP versions: IPv4 and IPv6. If you select IPv6 as IP version, please follow the configuration below to configure the parameters for WAN ports.

- **Encapsulation:** There are four connection types: Dynamic IP Address, Static IP Address, PPPoA/PPPoE and Bridge Mode. Please choose the designed type that you want to use. After that, you should follow the configuration below to proceed.

1) Dynamic IP Address

Select this option if your ISP provides you an IP address automatically. This option is typically used for Cable services. Please enter the Dynamic IP information accordingly.

IPv4/IPv6	IP Version : ☐ IPv4 ☐ IPv4/IPv6 ☒ IPv6
Encapsulation	ISP : ☒ Dynamic IP Address ☐ Static IP Address ☐ PPPoA/PPPoE ☐ Bridge Mode
Dynamic IP	IP Common Options Encapsulation : 1483 Bridged IP LLC Bridge Interface : ☐ Activated ☒ Deactivated Default Route : ☒ Yes ☐ No TCP MTU Option : TCP MTU(default:1500) 1500 bytes IPv6 Address IPv6 Message Fetch Type : Dynamic Mode DHCP IPv6 Enable : ☒ DHCP ☐ SLAAC DHCP PD Enable : ☒ Enable ☐ Disable MLD Proxy : ☒ Enable ☐ Disable Dual Stack Lite Enable : ☐ Enable ☒ Disable

Figure 4-11

- **IP Common Option:** Configure the IP common option here.
- **Encapsulation:** Select the encapsulation mode for the Dynamic IP Address, you can leave it default.
- **Bridge Interface:** Activate the option, the modem router can also work in Bridge mode.
- **Default Route:** If enable this function, the current PVC will be considered as the default gateway to Internet from this device.
- **TCP MTU Option:** Enter the TCP MTU as your desire. The default value is 1500.
- **DHCP IPv6:** There are two types of assignation for IPv6 address: DHCP (Dynamic Host Configuration Protocol) Server and SLAAC (Stateless address auto-configuration). Select your assignation type accordingly.
- **DHCP PD:** The DHCP PD (Prefix Delegation) function is enabled by default. If you want to disable the function, please click **Disable**.
- **MLD Proxy:** The MLD (Multicast Listener Discovery Protocol) Proxy function is enabled by default. If you want to disable the function, please click **Disable**.

2) Static IP Address

Select this option if your ISP provides static IP information for you. You should set static IP address, IP Default Gateway and DNS Server address in the screen below (shown in Figure 4-12).

IPv4/IPv6	IP Version : ☐ IPv4 ☐ IPv4/IPv6 ☒ IPv6
Encapsulation	ISP : ☐ Dynamic IP Address ☒ Static IP Address ☐ PPPoA/PPPoE ☐ Bridge Mode
Static IP	
IP Common Options	Encapsulation : 1483 Bridged IP LLC Bridge Interface : ☐ Activated ☒ Deactivated Default Route : ☒ Yes ☐ No TCP MTU Option : TCP MTU(default:1500) 1500 bytes
IPv6 Options	IPv6 Message Fetch Type : Static Mode IPv6 Address : :: / 0 IPv6 Default Gateway : :: IPv6 DNS Server1 : :: IPv6 DNS Server2 : :: MLD Proxy : ☒ Enable ☐ Disable
Dual Stack Lite	Enable : ☐ Enable ☒ Disable

Figure 4-12

Note:

Each IP address entered in the fields must be in the appropriate IPv6 form, which is eight IP octets separated by a colon (x:x:x:x:x:x:x:x). The modem router will not accept the IP address if it is not in this format.

3) PPPoA/PPPoE

Select this option if your ISP requires you to use a PPPoE connection. This option is typically used for DSL services. Select Dynamic PPPoE to obtain an IP address automatically for your PPPoE connection. Select Static PPPoE to use a static IP address for your PPPoE connection. Please enter the information accordingly.

IPv4/IPv6	IP Version : ☐ IPv4 ☐ IPv4/IPv6 ☒ IPv6
Encapsulation	ISP : ☐ Dynamic IP Address ☐ Static IP Address ☒ PPPoA/PPPoE ☐ Bridge Mode
PPPoE/PPPoA	Servicename : Username : Password : Encapsulation : PPPoE LLC Bridge Interface : ☐ Activated ☒ Deactivated
Connection Setting	Connection : ☒ Always On (Recommended) ☐ Connect On-Demand (Close if idle for 0 minutes) ☐ Connect Manually TCP MSS Option : TCP MSS(default:1400) 1400 bytes
IP Common Options	Default Route : ☒ Yes ☐ No
IPv6 Address	DHCP IPv6 Enable : ☒ DHCP ☐ SLAAC DHCP PD Enable : ☒ Enable ☐ Disable MLD Proxy : ☒ Enable ☐ Disable
Dual Stack Lite	Enable : ☐ Enable ☒ Disable

Figure 4-13

- **Service name:** Specify a name for the PPPoA/PPPoE connection for recognition.
- **Username:** Enter your username for your PPPoA/PPPoE connection to identify and verify your account to the ISP.
- **Password:** Enter your password for your PPPoA/PPPoE connection.
- **Encapsulation:** For both PPPoA/PPPoE connection, you need to specify the type of Multiplexing, either LLC or VC Mux.
- **Bridge Interface:** Activate the option, the modem router can also work in Bridge mode.
- **Connection:** For PPPoA/PPPoE connection, you can select **Always on** or **Connect on-Demand** or **Connect Manually**. Connect on demand is dependent on the traffic. If there is no traffic (or **Idle**) for a pre-specified period of time, the connection will drop down automatically. And once there is traffic send or receive, the connection will be automatically on.
- **TCP MSS Option:** Enter the TCP MSS as your desire. The default value is 1400.
- **Default Route:** You should select **Yes** to configure the PVC as the default gateway to Internet from this device.
- **DHCP IPv6:** There are two types of assignation for IPv6 address: DHCP (Dynamic Host Configuration Protocol) Server and SLAAC (Stateless address auto-configuration). Select your assignation type accordingly.
- **DHCP PD:** The DHCP PD (Prefix Delegation) function is enabled by default. If you want to disable the function, please click **Disable**.

- **MLD Proxy:** The MLD (Multicast Listener Discovery Protocol) Proxy function is enabled by default. If you want to disable the function, please click **Disable**.
- **Dual Stack Lite:** Enable the Dual Stack Lite (D-S Lite) function if you need. It is disabled by default.

4) Bridge Mode

If you select this type of connection, the modem router can be configured to act as a bridging device between your LAN and your ISP. Bridges are devices that enable two or more networks to communicate as if they are two segments of the same physical LAN.

- **Dual Stack Lite:** Enable the Dual Stack Lite (D-S Lite) function if you need. It is disabled by default.

The screenshot shows a configuration window with a sidebar on the left containing the following menu items: IPv4/IPv6, Encapsulation, Dual Stack Lite, and Bridge Mode. The 'Bridge Mode' item is selected and highlighted. The main content area displays the following settings:

- IP Version:** Three radio buttons are present: IPv4, IPv4/IPv6, and IPv6. The IPv6 radio button is selected.
- ISP:** Four radio buttons are present: Dynamic IP Address, Static IP Address, PPPoA/PPPoE, and Bridge Mode. The Bridge Mode radio button is selected.
- Enable:** Two radio buttons are present: Enable and Disable. The Disable radio button is selected.
- Encapsulation:** A dropdown menu is shown with the value '1483 Bridged IP LLC' selected.

Figure 4-14

Note:

After you finish the Internet configuration, please click **SAVE** to make the settings take effect.

4.3.1.3 IPv4/IPv6

If you select **IPv4/IPv6** as IP version, please follow both the [4.3.1.1 IPv4](#) and [4.3.1.2 IPv6](#) configuration based on different connection types to configure the parameters for WAN ports.

4.3.2 LAN

Choose “**Interface Setup**→**LAN**” menu, and you will see the LAN screen (shown in Figure 4-15). Please configure the parameters for LAN ports according to the descriptions below.

Interface	Quick Start	Interface Setup	Advanced Setup	Access Management	Maintenance	Status	Help										
	Internet	LAN	Wireless	6RD													
Router Local IP	IP Address : 192.168.1.1 IP Subnet Mask : 255.255.255.0 Dynamic Route : RIP2-B Direction : Both Multicast : IGMP v2 IGMP Snoop : ☐ Disabled ☒ Enabled MldSnoop : ☒ Disabled ☐ Enabled																
DHCP	DHCP : ☐ Disabled ☒ Enabled ☐ Relay																
DHCP Server	Starting IP Address : 192.168.1.100 Current Pool Summary IP Pool Count : 101 Lease Time : 259200 seconds (0 sets to default value of 259200) Physical Ports : ☒ 1

DHCPv6	DHCPv6 Server : ☒ Disable ☐ Enable																
SAVE CANCEL																	

Figure 4-15

- **Router Local IP:** These are the IP settings of the LAN interface for the device. These settings may be referred to as Private settings. You may change the LAN IP address if needed. The LAN IP address is private to your internal network and cannot be seen on the Internet.
- **IP Address:** Enter the Router's local IP Address, then you can access to the Web-based Utility via the IP Address, the default value is 192.168.1.1.
 - **IP Subnet Mask:** Enter the Router's Subnet Mask, the default value is 255.255.255.0.
 - **Dynamic Route:** Select this option to specify the RIP (Routing Information protocol) version for LAN interface, including **RIP1**, **RIP2-B** and **RIP2-M**. RIP2-B and RIP2-M are both sent in RIP2 format, the difference is that RIP2-M using Multicast, while RIP2-B using Broadcast format.
 - **Direction:** Select this option to specify the RIP direction. **None** is for disabling the RIP function. **Both** means the ADSL Router will periodically send routing information and accept routing information, and then incorporate them into routing table. **IN Only** means the ADSL Router will only accept but will not send RIP packet. **OUT Only** means the ADSL Router will only send but will not accept RIP packet.

- **Multicast:** Select IGMP version, or disable the function. IGMP (Internet Group Multicast Protocol) is a session-layer protocol used to establish membership in a multicast group. The ADSL ATU-R supports IGMP version 1 (**IGMP v1**), **IGMP v2** and **IGMP v3**. Select "Disabled" to disable it.
 - **IGMP Snoop:** Enable the IGMP Snoop function if you need.
 - **MldSnoop:** Enable the MldSnoop function if you need.
- **DHCP:** Select **Enabled**, then you will see the screen below (shown in Figure 4-16). The Router will work as a DHCP Server; it becomes the default gateway for DHCP client connected to it. DHCP stands for Dynamic Host Control Protocol. The DHCP Server gives out IP addresses when a device is booting up and request an IP address to be logged on to the network. That device must be set as a DHCP client to obtain the IP address automatically. By default, the DHCP Server is enabled. The DHCP address pool contains the range of the IP address that will automatically be assigned to the clients on the network.

DHCP

DHCP : ☐ Disabled ☒ Enabled ☐ Relay

DHCP Server

Starting IP Address : 192.168.1.100

IP Pool Count : 101

Lease Time : 259200 seconds (0 sets to default value of 259200)

Physical Ports : ☒ 1

DHCP Table

Hostname	IP Address	MAC Address	Status	Expire Time
	192.168.1.100	Manual Config	Static	

DNS

DNS Relay : Use Auto Discovered DNS Server Only

Primary DNS Server : N/A

Secondary DNS Server : N/A

Radvd

Radvd Enable : ☒ Disable ☐ Enable

DHCPv6

DHCPv6 Server : ☒ Disable ☐ Enable

Figure 4-16

- **Starting IP Address:** Enter the starting IP address for the DHCP server's IP assignment. The default Start IP Address is **192.168.1.100**.
 - **IP Pool Count:** The max user pool size.
 - **Lease Time:** The length of time for the IP lease. After the dynamic IP address has expired, the user will be automatically assigned a new dynamic IP address. The default is **259200** seconds.
 - **Physical Ports:** Specify the Physical Ports of the DHCP client.
- **DHCP Table:** The information of the DHCP clients will be displayed here

Hostname	IP Address	MAC Address	Status	Expire Time
	192.168.1.101	Manual Config	Static	
	192.168.1.100	94:DE:80:B4:D0:51	Static	N/A

- **Hostname:** Display the name of the DHCP client.
- **IP Address:** Display the IP Address of the DHCP client.
- **MAC Address:** Display the MAC Address of the DHCP client.
- **Status:** Display the status of the assigned IP Address, either **Static** or **Auto**. **Static** indicates that the IP Address is bounded to the MAC Address, while **Auto** indicates that the IP Address is assigned to the MAC Address automatically.

How to assign a static IP address to the client?

- 1). Select an **IP Address** from the drop-down list.
 - 2). Enter the **MAC Address** of the client in the table.
- **DNS Relay:** If you want to disable this feature, you just need to set both Primary and secondary DNS IP to 0.0.0.0. If you want to use DNS relay, you can setup DNS server IP to 192.168.1.1 on their Computer. If not, the device will perform as no DNS relay.
- **Primary DNS Server:** Type in your preferred DNS server.
 - **Secondary DNS Server:** Type in your preferred DNS server.

Note:

If **Use Auto Discovered DNS Server Only** is selected in DNS Relay, this Router will accept the first received DNS assignment from one of the PPPoA, PPPoE or MER/DHCP enabled PVC(s) during the connection establishment. If **Use User Discovered DNS Server Only** is selected in DNS Relay, it is necessary for you to enter the primary and optional secondary DNS server IP addresses. After type in the address, click **SAVE** button to save it and invoke it.

- **DHCP Relay:** Select **Relay**, then you will see the next screen (shown in Figure 4-17), and the Router will work as a DHCP Relay. A DHCP relay is a computer that forwards DHCP data between computers that request IP addresses and the DHCP server that assigns the addresses. Each of the device's interfaces can be configured as a DHCP relay. If it is enabled, the DHCP requests from local PCs will forward to the DHCP server runs on WAN side. To have this function working properly, please run on Router mode only, disable the DHCP server on the LAN port, and make sure the routing table has the correct routing entry.

DHCP	
DHCP Relay	DHCP : ☐ Disabled ☐ Enabled ☒ Relay DHCP Server IP for Relay Agent : 0.0.0.0

Figure 4-17

- **DHCP Server IP for Relay Agent:** Enter the DHCP server IP Address runs on WAN side.

Note:

If you select **Disabled**, the DHCP function will not take effect.

- **Radvd:** Radvd (Router Advertisement Daemon) is provided to assign IPv6 addresses to the computers in your LAN. This function is disabled by default. Enable this function if needed.

- **Radvd Enable:** Select this option to Enable/Disable Radvd. Select **Enable**, and then you will see the screen below (shown in Figure 4-18).

Radvd

Radvd Enable : ☐ Disable ☒ Enable

Radvd Mode : ☒ Auto ☐ Manual

Auto Prefix : ☒ Enable ☐ Disable

RA Flags Set : ☒ ManagedAddr ☒ Other Config

ValidLifetime : 0

Primary DNS : ::

Second DNS : ::

Figure 4-21

- **Prefix/length:** Enter an IPv6 Address prefix, and length of the prefix.
- **Preferred Lifetime:** The preferred lifetime for the prefix.
- **Valid lifetime:** The valid lifetime for the prefix.
- **Primary DNS:** Type in your preferred DNS server.
- **Second DNS:** Type in your secondary DNS server.

4.3.3 Wireless

Choose “**Interface Setup→Wireless**” menu, and you will see the Wireless screen (shown in Figure 4-22). Please configure the parameters for wireless according to the descriptions below.

Interface	Quick Start	Interface Setup	Advanced Setup	Access Management	Maintenance	Status	Help
	Internet	LAN	Wireless	6RD			
Access Point Settings	Access Point : ☒ Activated ☐ Deactivated Channel : UNITED STATES Auto Current Channel: 1 Transmit Power : High v Beacon Interval(ms) : 100 (range: 20~1000) RTS/CTS Threshold : 2347 (range: 1500~2347) Fragmentation Threshold(bytes) : 2346 (range: 256~2346, even numbers only) DTIM(ms) : 1 (range: 1~255) Wireless Mode : 802.11b+g+n v						
11n Settings	Channel Bandwidth : Auto v Extension Channel : above the control channel v Guard Interval : AUTO v MCS : AUTO v						
Multiple SSIDs Settings	SSID Index : 1 v Broadcast SSID : ☒ Yes ☐ No Use WPS : ☒ Yes ☐ No

Figure 4-22

➤ **Access Point Settings:** These are the settings of the access point. You can configure the rules to allow wireless-equipped computers and other devices to communicate with a wireless network.

- **Access Point:** Select Activated to allow wireless station to associate with the access point.
- **Channel:** Select the country and channel you want to use from the drop-down List of Channel. This field determines which operating frequency will be used. It is not necessary to change the wireless channel unless you notice interference problems with another nearby access point.

 Note:

Per FCC regulations, all Wi-Fi products marketed in the U.S. must be fixed to the U.S. region only.

- **Transmit Power:** Here you can specify the transmit power of Router. You can select High, Medium or Low which you would like. High is the default setting and is recommended.
 - **Beacon Interval:** Enter a value between 20-1000 milliseconds. The Beacon Interval value indicates the frequency interval of the beacon. A beacon is a packet broadcast by the Router to synchronize the wireless network. The default value is 100.
 - **RTS/CTS Threshold:** Should you encounter inconsistent data flow, only minor reduction of the default value 2347 is recommended. If a network packet is smaller than the preset RTS threshold size, the RTS/CTS mechanism will not be enabled. The Router sends Request to Send (RTS) frames to a particular receiving station and negotiates the sending of a data frame. After receiving an RTS, the wireless station responds with a Clear to Send (CTS) frame to acknowledge the right to begin transmission. In most cases, keep its default value of 2347.
 - **Fragmentation Threshold:** This value specifies the maximum size for a packet before data is fragmented into multiple packets. If you experience a high packet error rate, you may slightly increase the Fragmentation Threshold. Setting the Fragmentation Threshold too low may result in poor network performance. Only minor reduction of the default value is recommended. In most cases, it should remain at its default value of 2346.
 - **DTIM:** This value, between 1 and 255, indicates the interval of the Delivery Traffic Indication Message (DTIM). A DTIM field is a countdown field informing clients of the next window for listening to broadcast and multicast messages. When the Router has buffered broadcast or multicast messages for associated clients, it sends the next DTIM with a DTIM Interval value. Its clients hear the beacons and awaken to receive the broadcast and multicast messages. The default value is 1.
 - **Wireless Mode:** In the drop-down list you can select "802.11n", "802.11g", "802.11b" or "802.11 b+g ", "802.11 b+g+n " allows both 802.11g, 802.11b and 802.11n wireless stations to connect to the Router.
- **11n Settings:** These are the settings of the 11n parameters. If "802.11n", "802.11g+n" or "802.11b+g+n" is selected for **Wireless mode**, these settings will be displayed.
- **Channel Bandwidth:** Select the Bandwidth you want to use from the drop-down List. There are two options, "20 MHz", "40 MHz" and "20/40 MHz". If bigger bandwidth is selected, device could transmit and receive data with higher speed.
 - **Extension Channel:** If "20/40 MHz" is selected, this option will be displayed.

- **Guard Interval:** Select the guard interval you want from the drop-down list.
 - **MCS:** Select the wireless transmission rate from the drop-down list. By default, the option is AUTO.
- **Multiple SSIDs Settings:** These are the settings of the SSID.
- **SSID Index:** The index of the SSID, and in this model, you can only leave it as a default value of 1.
 - **Broadcast SSID:** When wireless clients survey the local area for wireless networks to associate with, they will detect the SSID broadcast by the Router. To broadcast the Router's SSID, keep the default setting. If you don't want to broadcast the Router's SSID, select "No".
 - **Use WPS:** Use WPS (Wi-Fi Protected Setup) function, you can add a new wireless device to an existing network quickly. To Use WPS, keep the default setting, and configure the parameters in **WPS Settings**. If you don't want to Use WPS, select "No", then you will see the screen as shown below.

Figure 4-23

- **SSID:** Wireless network name shared among all points in a wireless network. The SSID must be identical for all devices in the wireless network. It is case-sensitive and must not exceed 32 characters (use any of the characters on the keyboard). Make sure this setting is the same for all stations in your wireless network. Type the desired SSID in the space provided.
- **Authentication Type:** Select an authentication type from the drop-down list, which allows you to configure security features of the wireless LAN interface. Options available are: Disabled, WEP-64Bits, WEP-128Bits, WPA-PSK, WPA2-PSK and WPA-PSK/WPA2-PSK.

 Note:

For most users, it is recommended to use the default Wireless LAN Performance settings. Any changes made to these settings may adversely affect your wireless network. Under certain circumstances, changes may benefit performance. Carefully consider and evaluate any changes to these wireless settings.

1) WEP-64Bits

To configure WEP-64Bits settings, select the WEP-64Bits option from the drop-down list. The menu will change to offer the appropriate settings. WPA-64Bits is a data privacy mechanism based on a 64-bit shared key algorithm, as described in the IEEE 802.11g standard.

Multiple SSIDs Settings	SSID Index : 1 Broadcast SSID : ☒ Yes ☐ No Use WPS : ☐ Yes ☒ No SSID : TP-LINK_00000C Authentication Type : WEP-64Bits
WEP	WEP 64-bits : For each key, please enter either (1) 5 characters excluding symbols, or (2) 10 characters ranging from 0~9, a, b, c, d, e, f. WEP 128-bits : For each key, please enter either (1) 13 characters excluding symbols, or (2) 26 characters ranging from 0~9, a, b, c, d, e, f. ☒ Key#1 : 0x0000000000 ☐ Key#2 : 0x0000000000 ☐ Key#3 : 0x0000000000 ☐ Key#4 : 0x0000000000

Figure 4-24

2) WEP-128Bits

To configure WEP-128Bits settings, select the WEP-128Bits option from the drop-down list. The menu will change to offer the appropriate settings. 128-bit is stronger than 64-bit.

Multiple SSIDs Settings	SSID Index : 1 Broadcast SSID : ☒ Yes ☐ No Use WPS : ☐ Yes ☒ No SSID : TP-LINK_00000C Authentication Type : WEP-128Bits
WEP	WEP 64-bits : For each key, please enter either (1) 5 characters excluding symbols, or (2) 10 characters ranging from 0~9, a, b, c, d, e, f. WEP 128-bits : For each key, please enter either (1) 13 characters excluding symbols, or (2) 26 characters ranging from 0~9, a, b, c, d, e, f. ☒ Key#1 : 0x00000000000000000000000000000000 ☐ Key#2 : 0x00000000000000000000000000000000 ☐ Key#3 : 0x00000000000000000000000000000000 ☐ Key#4 : 0x00000000000000000000000000000000

Figure 4-25

3) WPA-PSK

To configure WPA-PSK settings, select the WPA-PSK option from the drop-down list. The menu will change to offer the appropriate settings. WPA-PSK requires a shared key and does not use a separate server for authentication. PSK keys can be ASCII or Hex type.

Multiple SSIDs Settings	SSID Index : 1 Broadcast SSID : ☒ Yes ☐ No Use WPS : ☐ Yes ☒ No SSID : TP-LINK_00000C Authentication Type : WPA-PSK
WPA-PSK	Encryption : AES Pre-Shared Key : 12345670 (8~63 ASCII characters or 64 hexadecimal characters)

Figure 4-26

- **Encryption:** Select the encryption you want to use: TKIP or AES (AES is an encryption method stronger than TKIP).
 - **TKIP (Temporal Key Integrity Protocol)** - a wireless encryption protocol that provides dynamic encryption keys for each packet transmitted.
 - **AES (Advanced Encryption Standard)** - A security method that uses symmetric 128-bit block data encryption.
- **Pre-Shared Key:** Enter the key shared by the Router and your other network devices. It must have 8-63 ASCII characters or 64 Hexadecimal characters.

4) WPA2-PSK

To configure WPA2-PSK settings, select the WPA2-PSK option from the drop-down list. The menu will change to offer the appropriate settings. WPA2-PSK requires a shared key and does not use a separate server for authentication. PSK keys can be ASCII or Hex type.

Multiple SSIDs Settings	
	SSID Index : 1 Broadcast SSID : ☒ Yes ☐ No Use WPS : ☐ Yes ☒ No SSID : TP-LINK_00000C Authentication Type : WPA2-PSK
WPA2-PSK	
	Encryption : AES Pre-Shared Key : 12345670 (8~63 ASCII characters or 64 hexadecimal characters)

Figure 4-27

5) WPA-PSK/WPA2-PSK

To configure WPA-PSK/WPA2-PSK settings, select the WPA-PSK/WPA2-PSK option from the drop-down list. The menu will change to offer the appropriate settings. WPA-PSK/WPA2-PSK requires a shared key and does not use a separate server for authentication. PSK keys can be ASCII or Hex type.

Multiple SSIDs Settings	
	SSID Index : 1 Broadcast SSID : ☒ Yes ☐ No Use WPS : ☐ Yes ☒ No SSID : TP-LINK_00000C Authentication Type : WPA-PSK/WPA2-PSK
WPA-PSK/WPA2-PSK	
	Encryption : AES Pre-Shared Key : 12345670 (8~63 ASCII characters or 64 hexadecimal characters)

Figure 4-28

WPS Settings

This section will guide you to add a new wireless device to an existing network quickly by WPS (or called QSS) method.

Note:

- This feature is available only when OPEN, WPA-PSK, WPA2-PSK or Mixed WPA2/WPA-PSK mode is configured.

- To build a successful connection by WPS, you should also do the corresponding configuration of the new device for WPS function meanwhile.

1) By PBC

There are two ways to add the wireless adapter to the network by PBC.

Method One: Hardware push button.

Step 1: Press the WPS button on the back panel of the Router.

Figure 4-28

Step 2: Press and hold the WPS button of the adapter directly for 2 or 3 seconds.

Step 3: Wait for a while until the next screen appears. Click **Finish** to complete the WPS configuration.

The WPS Configuration Screen of Wireless Adapter

Method Two: Software push button.

Step 1: Click **Start WPS** button in Figure 4-29.

Figure 4-29

Step 2: For the configuration of the wireless adapter, please choose “**Push the button on my access point**” in the configuration utility of the WPS as below, and click **Next**.

The WPS Configuration Screen of Wireless Adapter

Step 3: Wait for a while until the next screen appears. Click **Finish** to complete the WPS configuration.

The WPS Configuration Screen of Wireless Adapter

2) By PIN

If the new device supports Quick Security Setup and the PIN method, you can add it to the network by PIN with the following two methods.

Method One: Enter the PIN into my Router

Step 1: Keep **PIN code** selected and enter the PIN code of the wireless adapter in the field after **enrollee PIN code** as shown below. Then click **Start WPS**.

Figure 4-30

Note:

The PIN code of the adapter is always displayed on the WPS configuration screen.

Step 2: For the configuration of the wireless adapter, please choose “**Enter a PIN into my access point or a registrar**” in the configuration utility of the WPS, and get the PIN code on the screen as below, then click **Next**.

The WPS Configuration Screen of Wireless Adapter

Note:

In this example, the default PIN code of this adapter is 79666947 as the preceding figure shown.

Method Two: Enter the PIN of my modem router into the wireless adapter.

Step 1: Get the Current PIN code of the Router from **AP self PIN code** in Figure 4-31 (each Router has its unique PIN code. Here takes the PIN code 12345670 of this Router for example).

Figure 4-31

Step 2: For the configuration of the wireless adapter, please choose “Enter a PIN from my access point” in the configuration utility of the WPS as below, and enter the PIN code of the Router into the field after “Access Point PIN”. Then click **Next**.

The WPS Configuration Screen of Wireless Adapter

- **WPS progress:** Show the current WPS progress.
- **SSID:** Wireless network name shared among all points in a wireless network. The SSID must be identical for all devices in the wireless network. It is case-sensitive and must not exceed 32 characters (use any of the characters on the keyboard). Make sure this setting is the same for all stations in your wireless network. Type the desired SSID in the space provided.
- **Authentication Type:** Select an authentication type from the drop-down list, which allows you to configure security features of the wireless LAN interface. Options available are: Disabled, WEP-64Bits, WEP-128Bits, WPA-PSK, WPA2-PSK, and WPA-PSK/WPA2-PSK.
- **WDS Settings:** Select On/Off to enable/disable WDS. With this function enabled, the Router can bridge two or more WLANs.
 - **MAC Address:** Enter the MAC Address you wish to bridge in the field.
- **Wireless MAC Address Filter:** Wireless access can be filtered by using the MAC addresses of the wireless devices transmitting within your network's RADIUS.
 - **Active:** If you wish to filter users by MAC Address, select "Activated", and "Deactivated" for don't.
 - **Action:** To filter wireless users by MAC Address, select "Allow Association" or "Deny Association" the follow Wireless LAN station(s) association.
 - **MAC Address:** Enter the MAC Address you wish to filter in the field.

4.3.4 6RD

IPv6 tunnel is a kind of transition mechanism to enable IPv6-only hosts to reach IPv4 services and to allow isolated IPv6 hosts and networks to reach each-other over IPv4-only infrastructure before

IPv6 completely supplants IPv4. It is a temporary solution for networks that do not support native dual-stack, where both IPv6 and IPv4 run independently.

As a type of IPv6 tunnel, 6RD is used in the situation that your WAN connection is IPv4 while LAN connection is IPv6. Choose “**Interface Setup→Wireless**” menu, and you will see the screen as shown in Figure 4-32.

Figure 4-32

- **6rd IPv6 Prefix:** The prefix of the 6RD tunnel.
- **IPv4 Mask Length:** The length of the IPv4 mask.
- **6RD Border Relay IPv4 Address:** The IPv4 address of the border relay router of 6RD tunnel.
- **Use PVC:** Select the PVC from the the drop-down list.

Note:

To enable the function, there should not have any IPv6 WAN connections.

4.4 Advanced Setup

Choose “**Advanced Setup**”, you can see the next submenus:

Figure 4-33

Click any of them, and you will be able to configure the corresponding function.

4.4.1 Firewall

Choose “**Advanced Setup→Firewall**” menu, and you will see the next screen (shown in Figure 4-34).

Advanced Quick Start Interface Setup **Advanced Setup** Access Management Maintenance Status Help

Firewall Routing NAT QoS VLAN ADSL

Firewall

Firewall : ☒ Enabled ☐ Disabled
 (WARNING: If you enabled Firewall, the modem can block such attack: Denial of Service, SYN Flooding, Ping of Death, TearDrop...etc)

SPI : ☐ Enabled ☒ Disabled
 (WARNING: If you enabled SPI, all traffics initiated from WAN would be blocked, including DMZ, Virtual Server, and ACL WAN side.)

SAVE CANCEL

Figure 4-34

- **Firewall:** Select this option can automatically detect and block Denial of Service (DoS) attacks, such as Ping of Death, SYN Flood, Port Scan and Land Attack.
- **SPI:** If you enable SPI, all traffics initiated from WAN would be blocked, including DMZ, Virtual Server, and ACL WAN side.

4.4.2 Routing

Choose “**Advanced Setup→Routing**” menu, and you will see the routing information in the next screen (shown in Figure 4-35).

Advanced Quick Start Interface Setup **Advanced Setup** Access Management Maintenance Status Help

Firewall **Routing** NAT QoS VLAN ADSL

Routing Table List

#	Dest IP	Mask	Gateway IP	Metric	Device	Use	Edit	Drop
1	192.168.1.0	24	192.168.1.1	1	enet0	1237		
2	default	0	Node5	2	Idle	74		

ADD ROUTE

Figure 4-35

Click **ADD ROUTE** button to add a new route in the next screen (shown in Figure 4-36).

Static Route

Destination IP Address : 0.0.0.0

IP Subnet Mask : 0.0.0.0

Gateway IP Address : ☒ 0.0.0.0 ☐ PVC0 ▼

Metric : 0

Announced in RIP : Yes ▼

SAVE DELETE BACK CANCEL

Figure 4-36

- **Destination IP Address:** This parameter specifies the IP network address of the final destination.
- **IP Subnet Mask:** Enter the subnet mask for this destination.

- **Gateway IP Address:** Enter the IP address of the gateway. The gateway is an immediate neighbor of your ADSL Router that will forward the packet to the destination. On the LAN, the gateway must be a Router on the same segment as your Router; over Internet (WAN), the gateway must be the IP address of one of the remote nodes.
- **Metric:** Metric represents the "cost" of transmission for routing purposes. IP Routing uses hop count as the measurement of cost, with a minimum of 1 for directly connected networks. Enter a number that approximates the cost for this link. The number need not to be precise, but it must between 1 and 15. In practice, 2 or 3 is usually a good number.
- **Announced in RIP:** This parameter determines if the ADSL Router will include the route to this remote node in its RIP broadcasts. If set to Yes, the route to this remote node will be propagated to other hosts through RIP broadcasts. If No, this route is kept private and is not included in RIP broadcasts.

4.4.3 NAT

Choose “**Advanced Setup**→**NAT**” menu, you can setup the NAT (Network Address Translation) function for the Router (shown in Figure 4-37).

Figure 4-37

- **Virtual Circuit:** Enter Virtual Circuit Index that you plan to setup for the NAT function.
- **NAT Status:** This field shows the current status of the NAT function for the current VC. You can go to the previous screen (shown in Figure 4-6) to activate the function.
- **Number of IPs:** This field is to specify how many IPs are provided by your ISP for current VC. It can be single IP or multiple IPs. We select Multiple to explain.

Note:

For VCs with single IP, they share the same DMZ and Virtual servers; for VCs with multiple IPs, each VC can set DMZ and Virtual servers. Furthermore, for VCs with multiple IPs, they can define the Address Mapping rules; for VCs with single IP, since they have only one IP, there is no need to individually define the Address Mapping rule.

4.4.3.1 DMZ

Choose “**Advanced Setup**→**NAT**→**DMZ**” in Figure 4-37, you can configure the DMZ host in the next screen. A DMZ (demilitarized zone) is a host between a private local network and the outside

public network. It prevents outside users from getting direct access to a server that has company data. Users of the public network outside the company can access to the DMZ host.

Figure 4-38

- **DMZ Host IP Address:** Enter the specified IP Address for DMZ host on the LAN side.

4.4.3.2 Virtual Server

Choose “**Advanced Setup→NAT→Virtual Server**” in Figure 4-37, you can configure the Virtual Server in the next screen.

The Virtual Server is the server or server(s) behind NAT (on the LAN), for example, Web server or FTP server, that you can make visible to the outside world even though NAT makes your whole inside network appear as a single machine to the outside world.

Rule	Application	Protocol	Start Port	End Port	Local IP Address
1	FTP	ALL	21	21	192.168.1.100
2	HTTP_Server	ALL	80	80	192.168.1.101

Figure 4-39

- **Rule Index:** The Virtual server rule index for this VC. You can specify 12 rules in maximum. All the VCs with single IP will use the same Virtual Server rules.
- **Application:** The Virtual servers can be used for setting up public services on your LAN.
- **Protocol:** The protocol used for this application.
- **Start & End port number:** Enter the specific Start and End Port number you want to forward. If it is one port only, you can enter the End port number the same as Start port number. For example, if you want to set the FTP Virtual server, you can set the start and end port number to 21.
- **Local IP Address:** Enter the IP Address for the Virtual Server in LAN side.
- **Virtual Server Listing:** This displays the information about the Virtual Servers you establish.

To add a virtual server entry:

Step 1: Select the “Virtual Circuit” and select “Virtual Server”.

 Note:

For VCs with single IP, select **Single**; For VCs with multiple IPs, select **Multiple** for the option.

Step 2: Select the Rule index for the rule as shown in Figure 4-39.

Step 3: Select the application you want from drop-down list, then the protocol and port number will be added to the corresponding field automatically, you only need to configure the IP address for the virtual server; If the application list does not contain the service that you want, please configure the Port number, IP Address and Protocol manually.

Step 4: After that, click **SAVE** to make the entry take effect.

Other operations for the entries as shown in Figure 4-39:

Enter the index of assigned entry, and click the **DELETE** button to delete the entry.

Click the **BACK** button to return to the previous screen.

Click the **CANCEL** button to cancel the configuration which is made just now.

4.4.3.3 IP Address Mapping

Select **Multiple** for **numbers of IPs** in Figure 4-37, and choose “**Advanced Setup→NAT→IP Address Mapping(for Multiple IP Service)**”. You can configure the Address Mapping Rule in the next screen. The IP Address Mapping is for those VCs that configured with multiple IPs. The IP Address Mapping rule is per-VC based (only for Multiple IPs' VCs).

Address Mapping Rule : PVC0

Rule Index : 1

Rule Type : Many-to-One

Local Start IP : 0.0.0.0 (for all local IPs, enter 0.0.0.0 for Start IP)

Local End IP : 255.255.255.255 (for all local IPs, enter 255.255.255.255 for End IP)

Public Start IP : 0.0.0.0 (0.0.0.0 for modem's WAN IP)

Public End IP : N/A

Rule	Type	Local Start IP	Local End IP	Public Start IP	Public End IP
1	M-1	0.0.0.0	255.255.255.255	0.0.0.0	...

Figure 4-40

- **Rule Index:** Select the Virtual server rule index for this VC. You can specify 8 rules in maximum.
- **Rule Typ:** There are four types: one-to-one, Many-to-One, Many-to-Many Overload and Many-to-Many No-overload.
- **Local Start & End IP:** Enter the local IP Address you plan to map to. Local Start IP is the starting local IP address and Local End IP is the ending local IP address. If the rule is for all local IPs, then the Start IP is 0.0.0.0 and the End IP is 255.255.255.255.
- **Public Start & End IP:** Enter the public IP Address you want to do NAT. Public Start IP is the starting public IP address and Public End IP is the ending public IP address. If you have a dynamic IP, enter 0.0.0.0 as the Public Start IP.
- **Address Mapping List:** This displays the information about the Mapping addresses.

To add a mapping rule:

Step 1: Select the “Virtual Circuit” and Multiple for the “Number of IPs”. Then select the tab **IP Address Mapping** (shown in Figure 4-37).

 Note:

IP Address Mapping is only available for VCs with Multiple IPs.

Step 2: Select the Rule index for the rule as shown in Figure 4-40.

Step 3: Select the rule type you want from the drop-down list.

Step 4: Enter the local and public IP addresses in the corresponding fields.

Step 5: After that, click **SAVE** to make the entry take effect.

Other operations for the entries as shown in Figure 4-40:

Select the index of assigned entry, and click the **DELETE** button to delete the entry.

Click the **BACK** button to return to the previous screen.

Click the **CANCEL** button to cancel the configuration which is made just now.

4.4.4 QoS

Choose “**Advanced Setup→QoS**”, you can configure the QoS in the next screen. QoS helps to prioritize data as it enters your Router. By attaching special identification marks or headers to incoming packets, QoS determines which queue the packets enter, based priority. This is useful when there are certain types of data you want to give higher priority, such as voice data packets give higher priority than Web data packets. This option will provide better service of selected network traffic over various technologies.

Advanced	Quick Start	Interface Setup	Advanced Setup	Access Management	Maintenance	Status	Help
	Firewall	Routing	NAT	QoS	VLAN	ADSL	

Quality of Service	
	IP Version : ☒ IPv4 ☐ IPv6 QoS : ☐ Activated ☒ Deactivated Summary : QoS Settings Summary

ADD DELETE CANCEL	

Figure 4-41

- **IP Version:** Select your IP version.
- **QoS:** Select this option to Activate/Deactivate the IP QoS on different types (IP ToS and DiffServ).
- **Summary:** Click the button to view the configurations of QoS.
- **Rule:** Configure the rules for QoS. If the traffic complies with the rule, then the modem router will take the corresponding action to deal with it.
 - **Rule Index:** Select the index for the rule you want to configure.
 - **Active:** Activate the rule. The rule can take effect only when it is activated.
 - **Application:** Select the application that the rule aimed at.

- **Physical Ports:** Select the port whose traffic flow are controlled by the rule.
- **Destination MAC & IP & Mask & Port Range:** Enter the IP information about the Destination host for the rule.
- **Source MAC & IP & Mask & Port Range:** Enter the IP information about the Source host for the rule.
- **Protocol ID:** Select one among TCP/UDP, TCP, UDP or ICMP protocols for the application.
- **Vlan ID Range:** Enter the Vlan range, and the rule will be effective to the selected Vlans.
- **IPP/DS Field:** Select the type of the action to assign the priority.

When you select IPP/TOS, you can assign the priority via IP information. IP QoS function is intended to deliver guaranteed as well as differentiated Internet services by giving network resource and usage control to the Network operator.

- **IP Precedence Range:** Enter the IP precedence range that the modem router takes to differentiate the traffic.
- **Type of Service:** Select the type of service that the modem router takes to deal with the traffic.
- **802.1p:** Select the priority range for the rule.

When you select DSCP, you can assign the priority via DHCP (the header of IP group). It maps the IP group into corresponding service class.

- **DSCP Range:** Enter the DSCP range to differentiate the traffic.
 - **802.1p:** Select the priority range for the rule.
- **Action:** Configure the action that the modem router takes to deal with the traffic which accord with the rule.
- **IPP/DS Field:** Select the type for the action.
 - **IP Precedence Remarking:** Select the number to remark the priority for IP precedence.
 - **Type of Service Remarking:** Select the type to remark the service.
 - **DSCP Remarking:** Enter the number to remark the DSCP priority.
 - **802.1p Remarking:** Select the type to remark the 802.1p priority.
 - **Queue:** Select the priority type for the action.

4.4.5 VLAN

Choose “**Advanced Setup→VLAN**”, you can activate the VLAN function in the next screen.

Virtual LAN (VLAN) is a group of devices on one or more LANs that are configured so that they can communicate as if they were attached to the same LAN, when in fact they are located on a

number of different LAN segments. Because VLANs are based on logical instead of physical connections, it is very flexible for user/host management, bandwidth allocation and resource optimization. There are two types of VLAN as follows:

Port-Based VLAN: Each physical switch port is configured with an access list specifying membership in a set of VLANs.

ATM VLAN: Using LAN Emulation (LANE) protocol to map Ethernet packets into ATM cells and deliver them to their destination by converting an Ethernet MAC address into an ATM address.

Figure 4-42

1) Define VLAN Group

Click **Define VLAN Group** in Figure 4-42, you can define VLAN groups in the next screen (shown in Figure 4-43).

The screenshot shows the 'VLAN Group Setting' page. It includes the following fields and options:

- VLAN Index:** A dropdown menu set to '1'.
- Active:** Radio buttons for 'Yes' (selected) and 'No'.
- VLAN ID:** A text input field containing '1', with '(Decimal)' next to it.
- ATM VCs:** A section with a 'Tagged' checkbox (unchecked) and a table of ports 0 through 7, each with a checked checkbox.
- Ethernet:** A section with a 'Tagged' checkbox (unchecked) and a 'Port #' dropdown set to '1'.
- Wireless LAN:** A section with a 'Tagged' checkbox (unchecked) and a 'Port #' dropdown set to '1'.

Below these settings is a 'VLAN Group Summary' table:

Group	Active	ID	VLAN Group Ports	VLAN Tagged Ports
1	Yes	1	e1,w1,p0,p1,p2,p3,p4,p5,p6,p7	

Below the table is the text: 'p:pvc, e:ethernet, and w:wlan'.

At the bottom of the page are four buttons: 'SAVE', 'DELETE', 'CANCEL', and 'NEXT'.

Figure 4-43

- **VLAN Index:** Select the VLAN index for this VC. You can specify 8 groups in maximum.
- **VLAN ID:** This indicates the VLAN group.
- **ATM VCs:** Select the ATM VCs as members of VLAN, and if you leave the Tagged blank, the tag in frames will be deleted when transmitted from the VC.
- **Ethernet:** Select the Ethernet port as a member of VLAN.
- **Wireless LAN:** Select the wireless LAN port as a member of VLAN, and if you leave the Tagged blank, the tag in frames will be deleted when transmitted from the port.
- **VLAN Group Summary:** This displays the information about the VLAN Groups.

2) Assign VLAN PVID for each Interface

Click **Assign VLAN PVID for each Interface** in Figure 4-42, you can assign the PVID for each interface in the next screen (shown in Figure 4-44).

Figure 4-44

- **PVID:** Each physical port has a default VID called PVID (Port VID). PVID is assigned to untagged frames or priority tagged frames (frames with null (0) VID) received on this port.

4.4.6 ADSL

Choose “**Advanced Setup**→**ADSL**”, you can select the ADSL Type and ADSL Mode in the next screen. The ADSL feature can be selected when you meet the physical connection problem. Please check the proper settings with your Internet service provider.

Advanced	Quick Start	Interface Setup	Advanced Setup	Access Management	Maintenance	Status	Help
	Firewall	Routing	NAT	QoS	VLAN	ADSL	

ADSL	ADSL Mode : Auto Sync-Up ▼ ADSL Type : ANNEX A/LL/M ▼ ☒ Bitswap Enable ☒ SRA Enable
SAVE	

Figure 4-45

- **ADSL Mode:** Select the ADSL operation mode which your ADSL connection uses.
- **ADSL Type:** Select the ADSL operation type which your ADSL connection uses.
- **Bitswap Enable:** Check this box to enable Bitswap.
- **SRA Enable:** Check this box to enable SRA.

4.5 Access Management

Choose “**Access Management**”, you can see the next submenus:

Quick Start	Interface Setup	Advanced Setup	Access Management	Maintenance	Status	Help
ACL	Filter	SNMP	UPnP	DDNS	CWMP	

Figure 4-46

Click any of them, and you will be able to configure the corresponding function.

4.5.1 ACL

Choose “**Access Management→ACL**”, you can see the next screen (shown in Figure 4-47). You can specify the client to access the ADSL Router once setting his IP as a Secure IP Address through selected applications.

Access Management	Quick Start	Interface Setup	Advanced Setup	Access Management	Maintenance	Status	Help										
	ACL	Filter	SNMP	UPnP	DDNS	CWMP											
ACL IP Version	IP Version : ☒ IPv4 ☐ IPv6																
Access Control Setup	ACL : ☒ Activated ☐ Deactivated																
Access Control Editing	ACL Rule Index : 1 Active : ☒ Yes ☐ No Secure IP Address : 0.0.0.0 ~ 0.0.0.0 (0.0.0.0 ~ 0.0.0.0 means all IPs) Application : ALL Interface : LAN																
Access Control Listing	<table border="1"> <thead> <tr> <th>Index</th> <th>Active</th> <th>Secure IP Address</th> <th>Application</th> <th>Interface</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Yes</td> <td>0.0.0.0-0.0.0.0</td> <td>ALL</td> <td>LAN</td> </tr> </tbody> </table>							Index	Active	Secure IP Address	Application	Interface	1	Yes	0.0.0.0-0.0.0.0	ALL	LAN

1	Yes	0.0.0.0-0.0.0.0	ALL	LAN											

Figure 4-48

- **ACL:** If **Activated**, the IP addresses which are contained in the Access Control List can access to the modem router. If **Deactivated**, all IP addresses can access to the modem router.
- **ACL Rule Index:** Select the ACL rule index for the entry.
- **Active:** Enable the ACL rule.

- **Secure IP Address:** Select the IP addresses which are permitted to access to the modem router remotely. With the default IP 0.0.0.0, any client would be allowed to remotely access the ADSL modem router.
- **Application:** Select the application for the ACL rule, and then you can access the modem router through it.
- **Interface:** Select the interface for access: LAN, WAN or Both.
- **Access Control of Listing:** This displays the information about the ACL Rules.

If you select IPv6 as IP version, you will see the screen shown below.

ACL IP Version	IP Version : ☐ IPv4 ☒ IPv6														
IPv6 Access Control Setup	IPv6 ACL : ☒ Activated ☐ Deactivated														
IPv6 Access Control Editing	IPv6 ACL Rule Index : 1 ▼

Figure 4-49

- **IPv6 ACL:** If **Activated**, the IPv6 addresses which are contained in the Access Control List can access to the modem router. If **Deactivated**, all IP addresses can access to the modem router.
- **IPv6 ACL Rule Index:** Select the ACL rule index for the entry.
- **Active:** Enable the ACL rule.
- **Secure IPv6 Address:** Select the IPv6 addresses which are permitted to access to the modem router remotely.
- **Application:** Select the application for the IPv6 ACL rule, and then you can access the modem router through it.
- **Interface:** Select the interface for access: LAN, WAN or Both.
- **IPv6 Access Control of Listing:** This displays the information about the IPv6 ACL Rules.

4.5.2 Filter

Choose “**Access Management→Filter**”, you can see the Filter screen (the default is IP/MAC Filter screen shown in Figure 4-50). The filtering feature includes IP/MAC Filter, Application Filter, and URL Filter. The feature makes it possible for administrators to control user's access to the Internet, protect the networks.

4.5.2.1 IP Filter

Select **IP/Mac Filter** as the Filter type, and select **IP** as the Rule type (shown in Figure 4-50), then you can configure the filter rules based on IP address. The filtering includes **Outgoing** and **Incoming**, the detailed descriptions are provided below.

Access Management | Quick Start | Interface Setup | **Advanced Setup** | Access Management | Maintenance | Status | Help

Filter | ACL | Filter | SNMP | UPnP | DDNS | CWMP

Filter

Filter Type

Filter Type Selection: **IP / MAC Filter**

IP / MAC Filter Set Editing

IP / MAC Filter Set Index: 1

IP / MAC Filter Set Index: 1 | Interface: - | Direction: -

SAVE DELETE CANCEL

Figure 4-50

- **Filter Type Selection:** Select the filter type for the configuration below.
- **IP/MAC Filter Set Index:** Select the Set index for the IP Filter entry. This index can match with six IP / MAC Filter Rule Indexes.
- **Interface:** Select the interface for the entry.

Note:

If select PVC0~PVC7 as an interface, the filter will match the IP traffic of WAN port with specified IPs (Source IP Address and Destination IP Address). If select LAN as an interface, the filter will match the IP traffic of LAN port with specified IPs.

- **Direction:** Select the direction for this IP Filter rule. There are three filtering directions: Both, Incoming, Outgoing.

 Note:

Incoming means that IP traffic which is coming into the Router, and the Outgoing means that IP traffic which is going out the Router.

- **IP/MAC Filter Rule Index:** Select the Rule index for the IP Filter entry.

 Note:

You should set the **IP/MAC Filter Set Index** and **IP/MAC Filter Rule Index** together to appoint the address (shown in the Filter List) for the IP Filter rule. For example, (1, 2), it means the rule will be shown in the row 2 IP/MAC Filter Set Index 1.

- **Rule Type:** For IP Filter, please select IP here.
- **Active:** Select “Yes” to make the rule to take effect.
- **Source IP Address:** Enter the source IP address for the rule. You can enter 0.0.0.0; it means that all IP addresses are controlled by the rule.
- **Destination IP Address:** Enter the destination IP address for the rule. You can enter 0.0.0.0, it means that all IP addresses are controlled by the rule. The set of Subnet Mask and Port Number are same as Source IP Address.
- **Subnet Mask:** Enter the Subnet Mask for the rule.
- **Port Number:** Enter the Port Number for the rule. You can enter 0, which means that all ports are controlled by the rule.
- **Protocol:** Select the protocol: **TCP**, **UDP** or **ICMP** for the filter rule.
- **Rule Unmatched:** If the current rule can not match, and you select **Forward**, the Router will skip the rule and transmit directly. If you select **Next**, the Router will find the next filter rule (show in Filter list) to match.
- **IP/MAC Filter Listing:** This displays the information about the IP Filter rules.

To add an IP Address filtering entry:

For example: If you desire to block E-mail received and sent by the IP address 192.168.1.7 on your local network; And wish to make the PCs with IP address 192.168.1.8 unable to visit the website of IP address 202.96.134.12, while other PCs have no limit. You can configure the rules as follows. Presume the rules are both aimed at the interface PVC0, and their indexes are (1, 1), (1, 2) and (1, 3).

Step 1: Select the “IP/MAC Filter” as the Filter Type Selection (show in Figure 4-50).

Filter Type Selection : IP / MAC Filter ▼

Select the “IP” as the Rule Type on the Filter screen, then you can configure the specific rule for the example.

Rule Type : IP ▼

Step 2: Select the **IP/MAC Filter Set Index** and **IP/MAC Filter Rule Index** for the rule, then select the Interface “PVC0”, and select the Direction “Both” for the first rule.

IP / MAC Filter Set Index :	1
Interface :	PVC0
Direction :	Both
IP / MAC Filter Rule Index :	1
Rule Type :	IP
Active :	☒ Yes ☐ No

 Note:

If you want to make the rule take effect, please select **Yes** to active the rule.

Step 3: Enter the “Source IP Address”, “Destination IP Address”, “Subnet Mask” and “Port Number” in the corresponding field.

Source IP Address :	192.168.1.7	(0.0.0.0 means Don't care)
Subnet Mask :	255.255.255.255	
Port Number :	0	(0 means Don't care)
Destination IP Address :	0.0.0.0	(0.0.0.0 means Don't care)
Subnet Mask :	0.0.0.0	
Port Number :	25	(0 means Don't care)
Protocol :	TCP	
Rule Unmatched :	Next	

Step 4: Select the Protocol as “TCP” and select the Unmatched rule as “Next”.

Step 5: Finally, click the **SAVE** to save the entry.

Step 6: Go to Step 2 to configure the next two rules: Block E-mail received by the IP address 192.168.1.7 on your local network; Make the PC with IP address 192.168.1.8 unable to visit the website of IP address 202.96.134.12.

 Note:

After you complete the IP filter rules for the example, the Filter list will show as follows. You can enter the **IP / MAC Filter Set Index** to view the information about the rule.

#	Active	Src Address/Mask	Dest IP/Mask	Src Port	Dest Port	Protocol	Unmatched
1	Yes	192.168.1.7/ 255.255.255.255	0.0.0.0/ 0.0.0.0	0	25	TCP	Next
2	-	-	-	-	-	-	-
3	-	-	-	-	-	-	-
4	-	-	-	-	-	-	-
5	-	-	-	-	-	-	-
6	-	-	-	-	-	-	-

Other operations for the entries as shown in Figure 4-50:

Select the **IP / MAC Filter Set Index** and **IP/MAC Filter Rule Index** to view or modify the entry.

Select the **IP / MAC Filter Set Index** and **IP/MAC Filter Rule Index** to locate the specific rule, and then click the **DELETE** button to delete the entry.

4.5.2.2 MAC Filter

Select **IP/MAC Filter** as the Filter type, and select **MAC** as the Rule type (shown in Figure 4-51), and then you can configure the filter rules based on MAC address.

Access Management | Quick Start | Interface Setup | Advanced Setup | **Access Management** | Maintenance | Status | Help

Figure 4-51

- **Rule Type:** Select MAC for the MAC Filter rule.
- **Active:** Select “Yes” to make the rule to take effect.
- **MAC Address:** Enter the MAC address for the rule.
- **Rule Unmatched:** If the current rule can not match, and you select **Forward**, the Router will skip the rule and transmit directly. If you select **Next**, the Router will find the next filter rule (show in Filter list) to match.
- **IP/MAC Filter Listing:** This displays the information about the MAC Filter rules.

To add a MAC Address filtering entry:

For example: If you want to block the PCs with MAC addresses 00-0A-EB-00-07-BE and 00-0A-EB-00-07-5F to access the Internet, you can configure as follows. Presume the rules are both aimed at the interface PVC0, and their indexes are (1, 1) and (1, 2).

Step 1: Select the “IP/MAC Filter” as the Filter Type Selection:

Filter Type Selection : IP / MAC Filter

Select the “MAC” as the Rule Type on the Filter screen

Rule Type : MAC

Then you can configure the specific rule for the example.

Step 2: Select the **IP/MAC Filter Set Index** and **IP/MAC Filter Rule Index** for the rule, then select the Interface “PVC0”, and select the Direction “Outgoing” for the first rule.

IP / MAC Filter Set Index : 1
 Interface : PVC0
 Direction : Outgoing

IP / MAC Filter Rule Index : 1
 Rule Type : MAC
 Active : ☒ Yes ☐ No

Note:

If you want to make the rule take effect, please select **Yes** to active the rule.

Step 3: Enter the “MAC Address” and select the Rule Unmatched as “Next”.

MAC Address : 00:0A:EB:00:07:BE
 Rule Unmatched : Next

Step 4: Finally, click the **SAVE** to save the entry.

Step 5: Go to Step 2 to configure the next rule: Block the PC with MAC address 00:0A:EB:00:07:5F to access the Internet.

Note:

After you complete the MAC filter rules for the example, the Filter list will show as follows. You can enter the **IP / MAC Filter Set Index** to view the information about the rule.

#	Active	Src Address/Mask	Dest IP/Mask	Src Port	Dest Port	Protocol	Unmatched
1	Yes	00:0a:eb:00:07:be	-	-	-	-	Next
2	Yes	00:0a:eb:00:07:5f	-	-	-	-	Forward

Other operations for the entries as shown in Figure 4-50:

Select the **IP / MAC Filter Set Index** and **IP/MAC Filter Rule Index** to view or modify the entry.

Select the **IP / MAC Filter Set Index** and **IP/MAC Filter Rule Index** to locate the specific rule, and then click the **DELETE** button to delete the entry.

4.5.2.3 Application Filter

Select **Application Filter** as the Filter type (shown in Figure 4-52), and then you can configure the filter rules based on application.

Access Management	Quick Start	Interface Setup	Advanced Setup	Access Management	Maintenance	Status	Help

- **URL Index:** Select the index for the URL Filter entry.
- **URL:** Enter the URL for this URL Filter.
- **URL Filter Listing:** This displays the information about the URL Filter rules.

To add a URL filter entry:

For example: If you want to forbid the user to access the website: www.yahoo.com. Presume the rule is aimed at the interface PVC0, and its index is “1”.

Step 1: Select the “URL Filter” as the Filter Type Selection (show in Figure 4-53).

Step 2: Select the Index for the rule, and then enter the website in the URL field.

Step 3: Finally, Select **Yes** to active the rule, and then click the **SAVE** to save the entry.

Other operations for the entries as shown in Figure 4-50:

Select the **URL Index** to view or modify the entry.

Select the **URL Index** to locate the specific rule, and then click the **DELETE** button to delete the entry.

4.5.3 SNMP

Choose “**Access Management**→**SNMP**”, you can see the SNMP screen. The Simple Network Management Protocol (SNMP) is used for exchanging information between network devices.

 Activated ☐ Deactivated'. Below this are three input fields: 'Get Community : public', 'Set Community : public', and 'Trap Host : 0.0.0.0'. A 'SAVE' button is at the bottom right."/>

Figure 4-54

- **Get Community:** Set the password for the incoming Get and Get next requests from the management station.
- **Set Community:** Set the password for incoming Set requests from the management station.

4.5.4 UPnP

Choose “**Access Management**→**UPnP**”, you can configure the UPnP in the screen (shown in Figure 4-55).

UPnP (Universal Plug and Play) is a distributed, open networking standard that uses TCP/IP for simple peer-to-peer network connectivity between devices. An UPnP device can dynamically join a network, obtain an IP address, convey its capabilities and learn about other devices on the network. In turn, a device can leave a network smoothly and automatically when it is no longer in use. UPnP broadcasts are only allowed on the LAN.

 Activated ☐ Deactivated' and 'Auto-configured : ☒ Activated ☐ Deactivated (by UPnP-enabled Application)'. A 'SAVE' button is at the bottom right."/>

Figure 4-55

- **UPnP:** Activate or Deactivate the UPnP function. Only when the function is activated, can the UPnP take effect.
- **Auto-Configure:** If you activate the function, then the UPnP network devices can automatically configure network addressing, announce their presence in the network to other UPnP devices and enable exchange of simple product and service descriptions.

4.5.5 DDNS

Choose “**Access Management→DDNS**”, you can configure the DDNS function in the screen (shown in Figure 4-56).

The Router offers a Dynamic Domain Name System (**DDNS**) feature. The feature lets you use a static host name with a dynamic IP address. User should type the host name, user name and password assigned to your ADSL Router by your Dynamic DNS provider. User also can decide to turn on DYNDNS Wildcard or not.

Access Management	Quick Start	Interface Setup	Advanced Setup	Access Management	Maintenance	Status	Help

- **Username & Password:** Type the “User Name” and “Password” for your DDNS account.
- **Wildcard support:** Select the option to use Wildcard function

4.5.6 CWMP

Choose “**Access Management→CWMP**”, you can configure the CWMP function in the screen (shown in Figure 4-57).

The Router offers CWMP feature. The function supports TR-069 protocol which collects information, diagnoses the devices and configures the devices automatically via ACS (Auto-Configuration Server).

Access Management	Quick Start	Interface Setup	Advanced Setup	Access Management	Maintenance	Status	Help
	ACL	Filter	SNMP	UPnP	DDNS	CWMP

Maintenance	Quick Start	Interface Setup	Advanced Setup	Access Management	Maintenance	Status	Help
	Administration	Time Zone	Firmware	SysRestart	Diagnostics		
Administrator	Username : admin New Password : Confirm Password :						
	SAVE CANCEL						

Figure 4-59

Note:

- 1) There is only one account that can access Web-Management interface. The default account is "admin", and the password is "admin". Admin has read/write access privilege.
- 2) When you change the password, you should enter the new password twice, and then click **SAVE** to make the new password take effect.

4.6.2 Time Zone

Choose "**Maintenance→Time Zone**", you can configure the system time in the screen (shown in Figure 4-60).

The system time is the time used by the device for scheduling services. There are three methods to configure the time. You can manually set the time or connect to a NTP (Network Time Protocol) server. If a NTP server is set, you will only need to set the time zone. If you manually set the time, you may also set Daylight Saving dates and the system time will automatically adjust on those dates.

1) NTP Server automatically

Select **NTP Server automatically** as the Synchronize time, you only need to set the time zone.

Maintenance	Quick Start	Interface Setup	Advanced Setup	Access Management	Maintenance	Status	Help
	Administration	Time Zone	Firmware	SysRestart	Diagnostics		

Time Zone
Current Date/Time : 01/01/2000 01:29:16 Time Synchronization Synchronize time with : ☒ NTP Server automatically ☐ PC's Clock ☐ Manually Time Zone : (GMT) Greenwich Mean Time : Dublin, Edinburgh, Lisbon, London Daylight Saving : ☐ Enabled ☒ Disabled NTP Server Address : 0.0.0.0 (0.0.0.0: Default Value) SAVE CANCEL

Figure 4-60

 Note:

The ADSL Router built-in some NTP Servers, when the Router connects to the Internet, the Router will get the system time automatically from the NTP Server. You can also configure the NTP Server address manually, and then the Router will get the time from the specific Server firstly.

2) PC's Clock

Select **PC's Clock** as the Synchronize time, you don't need to set any items.

Time Zone
Current Date/Time : 06/26/2014 20:51:10 Time Synchronization Synchronize time with : ☐ NTP Server automatically ☒ PC's Clock ☐ Manually Date : 6 / 26 / 2014 (Month/Date/Year) Time : 20 : 51 : 10 (hour:min:sec) SAVE CANCEL

Figure 4-61

3) Manually

Select **Manually** as the Synchronize time, you need to set the date and time corresponding to the current time.

Time Zone
Current Date/Time : 06/26/2014 20:51:56 Time Synchronization Synchronize time with : ☐ NTP Server automatically ☐ PC's Clock ☒ Manually Date : 6 / 26 / 2014 (Month/Date/Year) Time : 20 : 51 : 56 (hour:min:sec) SAVE CANCEL

Figure 4-62

4.6.3 Firmware

Choose “**Maintenance**→**Firmware**”, you can upgrade the firmware of the Router in the screen (shown in Figure 4-63). Make sure the firmware or romfile you want to use is on the local hard drive of the computer. Click **Browse** to find the local hard drive and locate the firmware or romfile to be used for upgrade.

Maintenance	Quick Start	Interface Setup	Advanced Setup	Access Management	Maintenance	Status	Help
	Administration	Time Zone	Firmware		SysRestart	Diagnostics	

Firmware/Romfile Upgrade

Current Firmware Version : 5.0.0 Build 150728 Rel.08905

New Firmware Location :

New Romfile Location :

Romfile Backup :

Status : It might take several minutes, don't power off it during upgrading. Device will restart after the upgrade.

Figure 4-63

To upgrade the Router's firmware, follow these instructions below:

- Step 1:** Download a more recent firmware upgrade file from the TP-LINK website (<http://www.tp-link.com>).
- Step 2:** Type the path and file name of the update file into the “New Firmware Location” field. Or click the **Browse...** button to locate the update file.
- Step 3:** Click the **UPGRADE** button.

Note:

- 1) New firmware versions are posted at <http://www.tp-link.com> and can be downloaded for free. If the Router is not experiencing difficulties, there is no need to download a more recent firmware version, unless the version has a new feature that you want to use.
- 2) When you upgrade the Router's firmware, you may lose its current configurations, so please back up the Router's current settings before you upgrade its firmware.
- 3) Do not turn off the Router or press the Reset button while the firmware is being upgraded.
- 4) The Router will reboot after the upgrading has been finished.

To back up the Router's current settings:

- Step 1:** Click the **ROMFILE SAVE** button (shown in Figure 4-63), click **Save** button in the next screen (shown in Figure 4-64) to proceed.

Figure 4-64

Step 2: Save the file as the appointed file (shown in Figure 4-65).

Figure 4-65

To restore the Router's settings:

Step 1: Click the **Browse...** button to locate the update file for the device, or enter the exact path in "New Romfile Location" field.

Step 2: Click the **UPGRADE** button to complete.

4.6.4 SysRestart

Choose "**Maintenance**→**SysRestart**", you can select to restart the device with current settings or restore to factory default settings in the screen (shown in Figure 4-66).

Figure 4-66

4.6.5 Diagnostics

Choose “**Maintenance→Diagnostics**”, you can view the test results for the connectivity of the physical layer and protocol layer for both LAN and WAN sides in the screen (shown in Figure 4-67).

Figure 4-67

Ping Tool: This diagnostic tool troubleshoots connectivity, reachability, and name resolution to a given host or gateway.

- **IP Address/Domain Name:** Type the destination IP address (such as 202.108.22.5) or Domain name (such as http://www.tp-link.com).

If the result is similar to Figure 4-68, the connectivity of the Internet is fine.

Figure 4-68

If the result is similar to Figure 4-69, there is something wrong with the connectivity of the Internet.

Figure 4-69

4.7 Help

Choose “**Help**”, you can view the help information for configuration of any function.

Help	Quick Start	Interface Setup	Advanced Setup	Access Management	Maintenance	Status	Help

Status			▶ Device Info ▶ System Log ▶ Statistics				

Figure 4-70

 Note:

Click the tab, and you will be able to get the corresponding information.

Appendix A: Specification

General	
Standards and Protocols	ANSI T1.413, ITU G.992.1, ITU G.992.2, ITU G.992.3, ITU G.992.5 IEEE 802.11n, IEEE 802.11b, IEEE 802.11g, IEEE 802.3, IEEE 802.3u, TCP/IP, PPPoA, PPPoE, SNTP, HTTP, DHCP, ICMP, NAT
Safety & Emission	FCC, CE
Ports	One 10/100M Auto-Negotiation RJ45 port (Auto MDI/MDIX) One RJ11 port
LEDs	 (Power),  (ADSL),  (Internet),  (WLAN),  (WPS),  (LAN)
Network Medium	10Base-T: UTP category 3, 4, 5 cable 100Base-TX: UTP category-5 Max line length: 6.5Km
Data Rates	Downstream: Up to 24Mbps Upstream: Up to 2.5Mbps (With Annex M enabled)
System Requirement	Internet Explorer 5.0 or later, Netscape Navigator 6.0 or later Win 9x / ME / 2000 / XP / Vista / 7 / 8 / 8.1 / 10
Physical and Environment	
Working Temperature	0°C ~ 40°C
Working Humidity	10% ~ 90% RH (non-condensing)
Storage Temperature	-40°C ~ 70°C
Storage Humidity	5% ~ 90% RH (non-condensing)

Appendix B: Troubleshooting

T1. How do I restore my Router's configuration to its factory default settings?

With the Router powered on, press and hold the **RESET** button on the rear panel for 8 to 10 seconds before releasing it.

 Note:

Once the Router is reset, the current configuration settings will be lost and you will need to re-configure the router.

T2. What can I do if I don't know or forget my password?

- 1) Restore the Router's configuration to its factory default settings. If you don't know how to do that, please refer to **T1**.
- 2) Use the default user name and password: **admin, admin**.
- 3) Try to configure your Router once again by following the instructions in [3.2 Login](#).

T3. What can I do if I cannot access the web-based configuration page?

1. Configure your computer's IP Address.

For Mac OS X

- 1) Click the **Apple** icon on the upper left corner of the screen.
- 2) Go to "**System Preferences -> Network**".
- 3) Select **Airport** on the left menu bar, and then click **Advanced** for wireless configuration; or select **Ethernet** for wired configuration.
- 4) In the **Configure IPv4** box under **TCP/IP**, select **Using DHCP**.
- 5) Click **Apply** to save the settings.

For Windows 7

- 1) Click "**Start -> Control Panel -> Network and Internet -> View network status -> Change adapter settings**".
- 2) Right-click Wireless Network Connection (or Local Area Connection), and then click Properties.
- 3) Select Internet Protocol Version 4 (TCP/IPv4), and then click Properties.
- 4) Select Obtain an IP address automatically and Obtain DNS server address automatically. Then click OK.

For Windows XP

- 1) Click "**Start -> Control Panel -> Network and Internet Connections -> Network Connections**".
- 2) Right-click Wireless Network Connection (or Local Area Connection), and then click Properties.

- 3) Select Internet Protocol (TCP/IP), and then click Properties.
- 4) Select Obtain an IP address automatically and Obtain DNS server address automatically. Then click OK.

For Windows 8/8.1

- 1) Move your mouse to the lower right corner and you will see **Search** icon  in the Popups. Go to **Search** -> **Apps**. Type **Control Panel** in the search box and press **Enter**, then you will go to **Control Panel**.
 - 2) Click "View network status and tasks > Change adapter settings".
 - 3) Right-click "Ethernet" and then select Properties.
 - 4) Double-click Internet Protocol Version 4 (TCP/IPv4). Select Obtain an IP address automatically, choose Obtain DNS server address automatically and then click OK.
2. Configure your IE browser

Open your IE browser, click **Tools** tab and you will see the following screen.

Select **Never dial a connection**

Click **OK**

Now, try to log on to the Web-based configuration page again after the above settings have been configured. If you still cannot access the configuration page, please restore your modem router's factory default settings and reconfigure your modem router following the instructions in [3.2 Login](#). Please feel free to contact our Technical Support if the problem persists.

T4. What can I do if I cannot access the Internet?

- 1) Check to see if all the connectors are connected well, including the telephone line, Ethernet cables and power adapter.
- 2) Check to see if you can log on to the web management page of the modem router. If you can, try the following steps. If you cannot, please set your computer referring to **T3** then try to see if you can access the Internet. If the problem persists, please go to the next step.
- 3) Consult your ISP and make sure all the VPI/VCI, Connection Type, account username and password are correct. If there are any mistakes, please correct the settings and try again.
- 4) If you still cannot access the Internet, please restore your modem router to its factory default settings and reconfigure your modem router by following the instructions in [3.2 Login](#).
- 5) Please feel free to contact our Technical Support if the problem still exists.

 Note:

For more details about Troubleshooting and Technical Support contact information, please log on to our Technical Support Website: <http://www.tp-link.com/en/support>.
