Getting Started

1. Plug the MO1 into a USB-C port on your laptop. The power indicator will light up green 2. Connect your memory cards, USB peripherals (like mouse, keyboard, flash drive), Ethernet cable, and HDMI display to the hub

Product Care & Use

- Connect this hub to your host device first before connecting other devices to the hub.
- Use your laptop's original power adapter to charge your laptop via the USB-C Power Delivery port on this hub
- When connecting an external hard drive or multiple devices to this hub, connect your laptop's power adapter to the USB-C Power Delivery port first because your host device may not deliver the required power.
- When using the USB 3.1 Gen 1 data ports and USB-C data port, the power demand of connected devices shouldn't exceed the total current output of 900mA. These ports are not recommended for charging due to lower output.
- Keep away from liquids and extreme heat.
