About Us

**MODBAP MODULAR BY BEATPPL**
Modbap Modular is a line of eurorack modular synthesizers and electronic music instruments by Beatppl. Founded by Corry Banks (Bboytech), Modbap Modular was born of the Modbap Movement with a simple mission to dev tools for beat-driven hiphop-leaning modular artists. It is our goal to develop eurorack modules from the beatmaker's perspective while adding value for music makers of all genres. It's almost impossible to explain Modbap Modular without answering the questions; "So, what is Mod Bap? MODBAP is the fusion of modular synthesis and boom-bap (or any form of hip-hop) music production. The term was created by BBoyTech as a denotation of his experiments with modular synthesis and boombap music production. From that point forward, a movement was born where like minded creatives built a community around idea of Modbap. Modbap Modular is in effect, the result of that movement in a space where we'd previously not existed.
