7. Connect the power cord to the socket in the power supply and to the 230V mains socket.
8. Set the power switch on the PSU housing to the I position (if present).

This device was designed and made of high-quality reusable materials and components. If the device, its packaging, the user's manual, etc. are marked with crossed waste containers, it means they are subject to segregated household waste collection in compliance with Directive 2012/19/UE of the European Parliament and of the Council. This marking informs that electric and electronic equipment shall not be thrown away together with household waste after it's been utilized. The user is obliged to bring the utilized equipment to electric and electronic waste collection points. Those running such collection points, including local collection points, shops, or commune units, provide a convenient system enabling to scrapping of such equipment. Appropriate waste management aids in avoiding consequences that are harmful to people and the environment and result from dangerous materials used in the device, as well as improper storage and processing. Segregated household waste collection aids recycle materials and components of which the device was made. A household plays a crucial role in contributing to recycling and reusing waste equipment. This is the stage where the basics are shaped which largely influence the environment being our common good. Households are also one of the biggest

users of small electrical equipment. Reasonable management at this stage aids and favours recycling. In the case of improper waste management, fixed penalties may be imposed under national legal regulations.
