Contents

Training for Software

Training for Software will provide you the ability to specify, configure and maintain your plant level automation software infrastructure.

An integral part of any plant-wide automation system is a dependable and robust Human Machine Interface (HMI) strategy. This HMI strategy can include other elements such as report generation, historical data acquisition, and collection of Overall Equipment Efficiencies (OEE). Additionally, asset management, production management, and

virtualized architectures are becoming more common. New technologies within this automation segment continue to accelerate, challenging even the best software technicians.

Let us help you develop the proper skills required to design, configure, and maintain advanced software technologies within today's automation systems.

Classroom Training:

- FactoryTalk® View SE Programming
- FactoryTalk® View ME and PanelView Plus Programming
- FactoryTalk® VantagePoint Configuration and Reporting
- FactoryTalk® Batch Project Design and Implementation
- FactoryTalk® Historian Site Edition Configuration and Data Collection
- FactoryTalk® ViewPoint Implementation
- FactoryTalk® Metrics Configuration
- ThinManager® Configuration and Maintenance

e-Learning:

- FactoryTalk® View Machine Edition (ME)–Interactive Objects
- FactoryTalk® View Machine Edition (ME)–Drawing Objects
- FactoryTalk® View Machine Edition (ME)–Applications and Displays

Virtual Classroom Training:

- FactoryTalk® ViewPoint Implementation
