Get to know your Portable SSD

- This product is plug and play under Windows 7/8/10/11 and macOS, without installing any drivers.
- When you plug the cable into the USB port of the computer, the “MOVESPEED” drive letter will appear in your OS, and then it can be used normally.
- You can get a complete high-speed transmission experience when inserting the USB3.2 Gen2x2 interface. It is also compatible to USB2.0/3.0/3.1/3.2/4 version with relatively low transmission speed.
- DO NOT unplug the cable when the Portable SSD is working! To avoid data loss and product damage, you should wait for the data to be transmitted successfully, or you can stop the transmission first, then disconnect it in the safe way to remove the hardware.
- The nominal capacity is calculated as 1GB = 1000MB, and the operating system is calculated as 1MB = 1024KB, 1GB = 1024MB, so there is a certain difference between the actual available capacity of flash memory products and the nominal capacity.
