MOWEA Working Student in IT Infrastructure Instructions

Working Student in IT Infrastructure (m/f/d) (Studentenjob | Berlin)

Wind energy is not limited to large and remote megawatt plants, wind energy also offers enormous potential for decentralized energy supply in urban areas and industries. That is why MOWEA offers its wind energy solutions modularly based on the building block principle, highly efficient, and flexibly scalable. We install our micro wind turbines on house roofs, industrial areas or mobile phone masts, and much more.

MOWEA brings wind power and mobile communications together and helps telecommunication providers and radio tower operators to achieve their climate goals. New mobile technologies are becoming more efficient, but powering radio towers also requires sustainable energy sources. MOWEA helps with its micro wind turbines to make radio masts independent from the grid or environmentally unfriendly diesel generators. We are the first company worldwide to realize the installation of wind turbines on radio masts as an accredited supplier of major suppliers.

We are looking for a Working Student in IT Infrastructure (m/f/d) who will be part of our MOWEA-Team as soon as possible.

We value your personality and your professional skills. Everyone is welcome, regardless of gender, skin color, nationality, sexual orientation or religion. We are also happy to hire people with disabilities.
