mrSafe SS03 Smart Home Socket Set

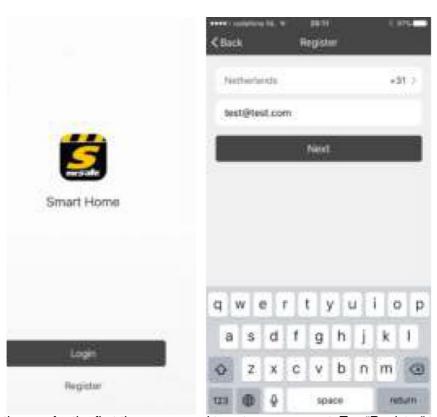

## **Getting Started**

#### Installing the app

Go to the Apple App store or Google Play Store and search for "mrsafe". If you are using an iPad you need to make sure that you have set the search for "apps for iPhone and iPad". If you cannot find the App on the Google Play Store, you can download it for Android devices on www.mrsafe.eu. Download the mrsafe smart home app onto your device.

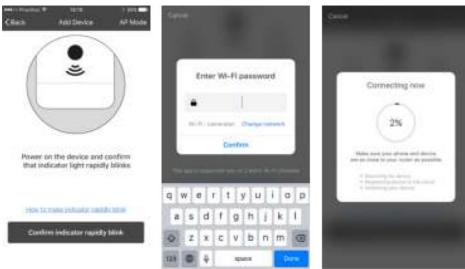

#### Starting the app and registering

When you are using the app for the first time, you need to setup an account. Tap "Register" to enter the registration page. The system will automatically recognize your country / area, or you can select it yourself. Enter your mobile phone number and/or your e-mail address, type in a password and tap "Next". If you have entered your phone number you will receive a verification code by SMS. If you chose to register by e-mail address, you will receive a mail with the verification code. Use the link in the e-mail or the code of the SMS to verify your account. Tap "Confirm" to complete the registration. The app will remember your account after registration.

#### Installing the BASE socket

The Mr Safe Home Socket consists of 3 devices. 1 is marked with BASE on the product label. Insert this BASE socket in a wall power socket close to your Wi-Fi router. The WHITE LED on the BASE socket will light up. Start by making sure your smartphone is connected to your Wi-Fi Router and that both the socket and your smartphone are in the proximity of your Wi-Fi router. Open the app and press the "+" button in the upper right corner to add a device. When the white LED is flashing 2x per second, then click "confirm indication rapidly blinking". Otherwise, press the button of the BASE socket for 6 seconds. The white LED on the BASE socket will now flash 2x/second (if the flashing is different, press the button again for 6 seconds) When the white LED is flashing correctly you can press the button in the app "confirm indicator rapidly blink". The app will search for the new BASE socket. After it is found, you will have to enter your Wi-Fi password of the modem/router and you can enter or change the name and click done to finalize the installation.

#### Adding an EXTRA socket to your BASE socket

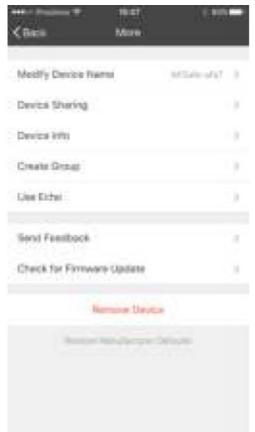

You can add an extra socket to your BASE socket by selecting the BASE socket in the app. Plug in the extra socket close to the base socket. Tap the Base socket in the app and press "+" add to add an extra socket. Press the button on the extra socket for 5 seconds and press "next" in the app to confirm. The base socket will now search for the extra socket. You can change the name and tap "save" to add the extra socket.

# Operating the socket

From the app you can turn the smart sockets on or off by pressing the GREEN (=ON) or GREY (=OFF) button in the app

# **Socket options**

To enter the options menu for the sockets, select the socket and press the "..." in the upper right corner. Here you can change the name of the device, share the device with family members, create groups and delete the device.

## Change the name of the device

To change the name of the device, go to the options menu of the socket (as described above) and press "Change device name". You can now input the desired name.

## Sharing devices with your family

You can share devices with your family members so they can also control the smart sockets. Press "share device" and then "add" to add a family member. You will have to input their phone number or email-address and confirm.

## **Device info**

Here you can verify details and info of your device.

## Adding sockets to a group

You can group the sockets, so that when you turn them on or off they all execute the command with just one tap.

To group sockets press "..." in the upper right corner to enter the socket menu. Press "Create group" to select the sockets you want to group and press confirm to create the group.

## Send feedback and search for firmware update

You can send feedback about the device to the manufacturer by pressing "send feedback" and leaving your note. It may take up a few days before an answer is returned.

From time to time the manufacturer will update the firmware for this device. You can manually check for new firmware by pressing "Search for new firmware" and installing it.

#### **Deleting a device**

Here you can also delete a device by pressing "Delete device"

## **Adding timers**

You can add timers to your devices by double pressing the device in the list.

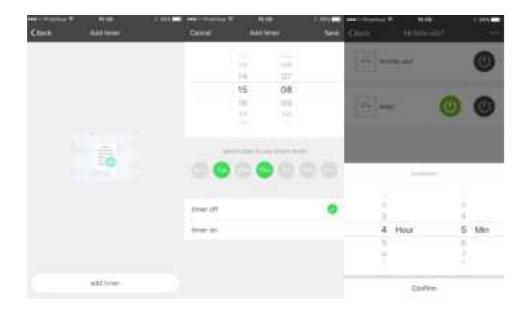

You can add a:

Planning timer

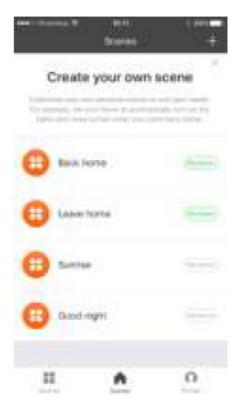

Select the planning timer if you want your socket to go ON/OFF at certain times on certain days. Press "Add Timer" in the lower right corner and press "add timer" to add your timer. You can choose the days and hours the device has to go ON/OFF.

· Countdown timer

Select the countdown timer if you want the device to go ON/OFF after a countdown time. Press "Countdown" in the lower middle to select the countdown for the device.

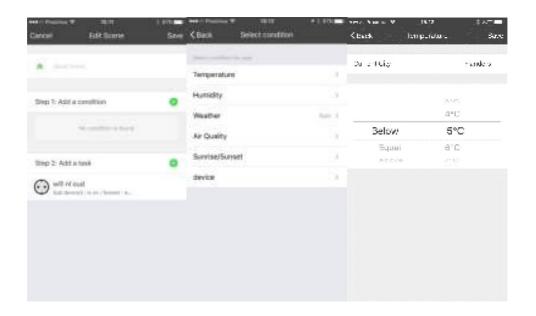

## **Scenes**

You can add personalized scenes to your device, for example to turn on all devices when the sun sets, or by rainfall etc. Press "Scenes" in the app to get started with the 4 presets. If you want to add your own customized scene, press "+" in the upper right corner. Optionally, you can add a condition to the scene by selecting temperature, humidity, weather, air quality, sunrise/sunset,\* ... The app will ask you to select your location and a certain condition such as temperature below/above x°C, weather conditions etc.

Tap "add task" to select the device and the command to execute (ON/OFF, ...)

• (availability may differ per region)
