### 1.5 Device Admin Password

**Note:** Synchronize administrator password switch is turned on by default. You can customize the administrator password after turning it off

The screen is titled "Setup Wizard" with a back arrow on the left. The main heading is "Please create device admin password". Below this, there is a "Status:" label with a blue toggle switch. A note states: "Synchronization is consistent with the extended WIFI password". To the right, "Password strength:" is followed by an orange "Weak" label. There are two input fields: "Admin Password" and "Confirm Admin Password", both containing seven dots and an eye icon. At the bottom is a dark grey "Next" button.

Figure 1-7

### 1.6 Summary

Check the information, and then click "Finish" to save the configuration.

The screen is titled "Setup Wizard" with a back arrow on the left. The main text reads: "Below is a summary of your Wi-Fi security and device password settings. Please make a note of your settings and click 'Finish' to complete the device configuration." Below this is a table summarizing the settings:

Router WiFi Name:	@ASC
Router WiFi Password:	hmk12345
Wi-Fi Network Name	@ASC
Wi-Fi Password	hmk12345
Admin Password	hmk12345

At the bottom is a dark grey "Finish" button.

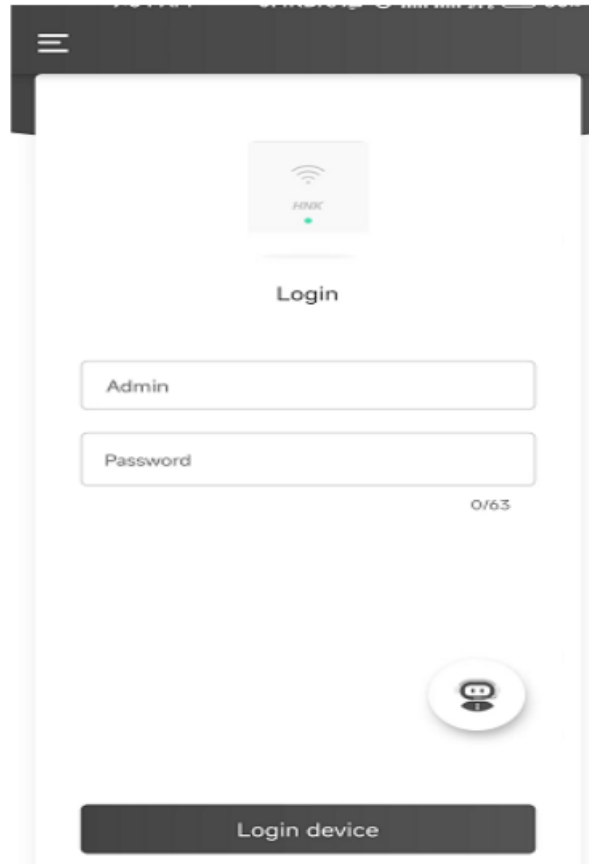

Figure 1-8

## Login

### 2.1 Login APP

After completing the configuration wizard, please reconnect to the WiFi and log in to the app again.

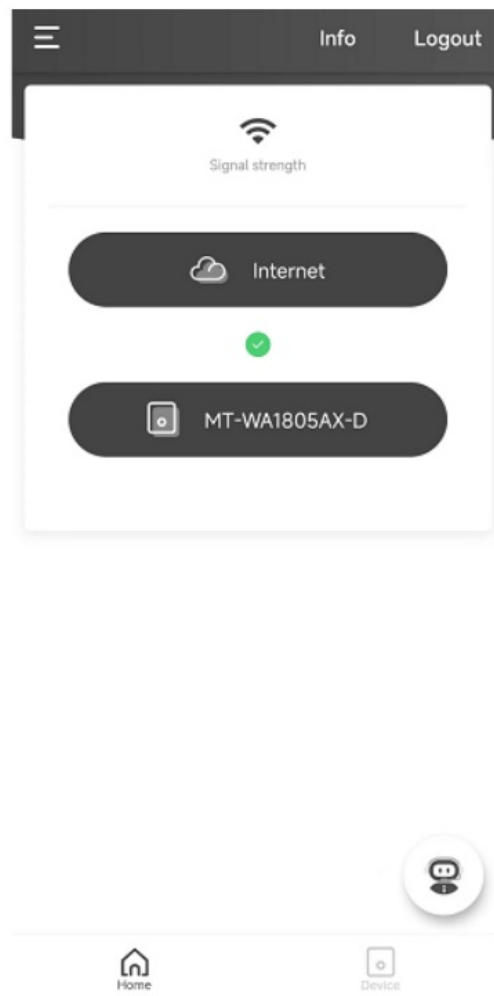

Admin Password The Device administrator Password you set on Wizard Page.

**Figure 2-1**

### Home Page

Home page information is displayed below, including signal strength, internet connection status, device information, and a logout button.

**Figure 3-1**

### 3.1 device Information Display Page

Home>>Info

It shows basic information about the router, including device name, FW version, and hardware version of the router.

**Figure 3-2**

### 3.2 Logout Button

Home>>Logout

Click “Logout” to exit the current login and jump to the login page.

### Device Page

#### 4.1 Connected Clients List

It shows all Connected Client's information, including device name, mac address,IP address, and connection method.

Figure 4-1

#### 4.2 Device details Page

Device>>Device details page

The device details page shows details information about the connected device.

You can set the remark of the connected device.

Click the “add to blacklist” button to add the device to the blacklist.

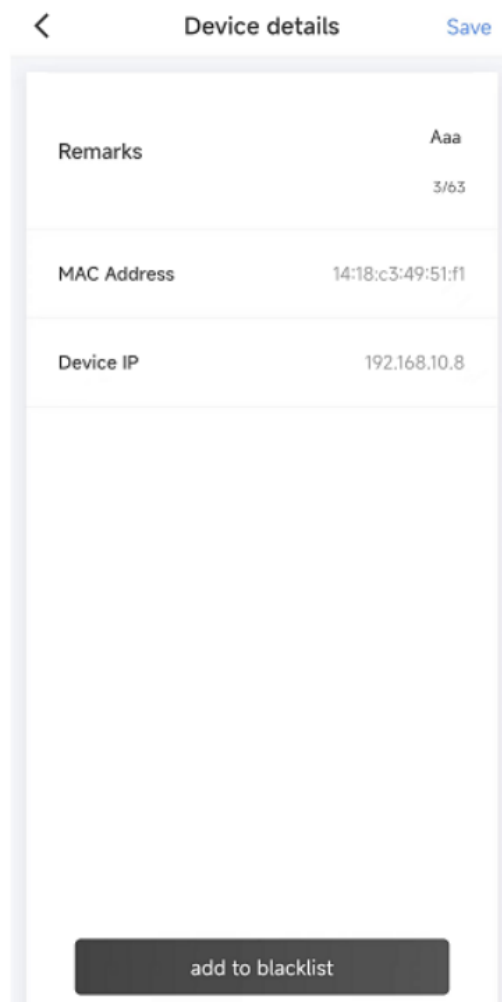

Figure 4-2

## 4.3 Blacklist Page

### Device>>Blacklist

The blacklist page shows all the devices added to the blacklist.

Once the device is added to the blacklist, it can connect to wifi, but cannot access the internet.

Click “Remove blacklist” to remove the device from the blacklist.

Figure 4-3

## Basic Configuration

### 5.1 Administrator Password Settings

Basic Configuration>>Administrator Password

To set the administrator password, you need to enter the original password for verification, then enter a new administrator password and verify it again.

Figure 5-1

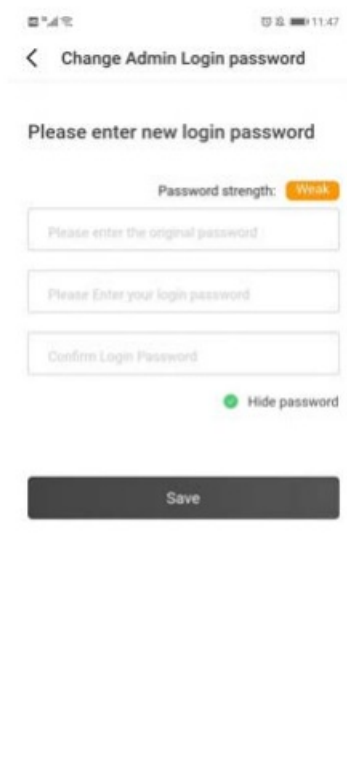

Figure 5-2

After modifying the administrator password, the app will automatically jump to the login page. Enter the administrator password to log in.

### 5.2 Root Router Connection

Basic Configuration>>Root Router Connection

You can view the current root router on this page, or click Scan to select the network to be relayed.

### 5.3 WIFI Settings

#### Basic Configuration>>WIFI Settings

Use this section to configure the wireless settings for your repeater.

The screenshot shows the 'Wi-Fi Settings' screen. At the top, there is a back arrow and the title 'Wi-Fi Settings'. Below this, the instruction 'Please configure WiFi Name & Password' is displayed, with a link for 'Advanced Setup'. There are two input fields: 'WiFi Name' with the value '@ASC1' and 'WiFi Password' with masked characters and a toggle icon. A 'Smart Connect' toggle switch is turned on. At the bottom, there is a large 'Finish' button.

**Figure 5-4**

### 5.3.1 Advanced Setup

Configure the 2.4G or 5G WIFI SSID, password, and security.

The figure contains two screenshots of the 'WiFi Advanced Settings' screen. The left screenshot shows the '2.4GHz' band selected, with settings for 'Wireless Name' (@ASC1), 'Security' (WPA2-PSK), and 'Wireless Password' (hnk12345). The right screenshot shows the '5GHz' band selected with the same settings. Both screens have a 'Save' button at the bottom.

**Figure 5-5**

### 5.3.2 Smart Connect

When the Smart Connect feature is on, your wireless device can only find one wireless SSID of the router, and it will automatically match the 2.4G or 5G band WIFI according to the connection signal strength.

## Wi-Fi Settings

Smart Connect

Finish

**Figure 5-6**

After the smart connection is closed, the 2.4G WIFI and the 5G WIFI can be searched on the terminal wireless device respectively, and there are two wireless bands to be displayed on the page.

The screenshot shows the 'Wi-Fi Settings' interface. At the top, there is a back arrow and the title 'Wi-Fi Settings'. Below this, a prompt says 'Please configure WiFi Name & Password' with a link to 'Advanced Setup'. There are two sections: '2.4G Network' and '5G Network'. Each section has a 'WiFi Name' field (set to '@ASC1-2.4G' and '@ASC1-5G' respectively) and a 'WiFi Password' field (masked with dots and an eye icon). At the bottom, there is a 'Smart Connect' toggle switch and a 'Finish' button.

**Figure 5-7**

## Advanced Configuration

### 6.1 WiFi Advanced Settings

Advanced Configuration>>WiFi Advanced Settings

You can configure 2.4G and 5G wifi advanced configuration by this section, such as SSID Broadcast and security mode.

The screenshot shows the 'WiFi Advanced Settings' screen for the 2.4GHz band. It has a back arrow and the title 'WiFi Advanced Settings'. There are two tabs: '2.4GHz' (selected) and '5GHz'. The settings include 'Wireless Name' (set to '@ASC1'), 'Security' (set to 'WPA/WPA2-PSK' with a dropdown arrow), and 'Wireless Password' (set to 'hnk12345'). At the bottom is a 'Save' button.

**Figure 6-1**

The screenshot shows the 'WiFi Advanced Settings' screen for the 5GHz band. It has a back arrow and the title 'WiFi Advanced Settings'. There are two tabs: '2.4GHz' and '5GHz' (selected). The settings include 'Wireless Name' (set to '@ASC1-5G'), 'Security' (set to 'WPA/WPA2-PSK' with a dropdown arrow), and 'Wireless Password' (set to 'hnk12345'). At the bottom is a 'Save' button.

**Figure 6-2**

### 6.2 Online Upgrade

Advanced Configuration>>Online Upgrade

This page will display your current firmware version. Click on the ‘Check for New Firmware’ button for detecting the latest firmware version. I have, you can upgrade your firmware to the latest version. Otherwise, the page will prompt that the firmware is the latest version.

## Frequently Asked Questions:

Why the connected node can not be managed:

- Please confirm that the mobile wifi is connected to the SSID of the device to be managed

How to restore the router to factory settings:

- When the power is on, sting the repeater's "Reset" pinhole for 10 seconds to restore the factory settings.

How to manage the node by using a PC / laptop:

- Step 1. Connect the PC / Laptop to the mesh repeater's Wi-Fi or LAN port via ethernet cable.
- Step 2. Launch an Internet Browser(Chrome, Safari,etc.)and enter the repeater's domain name or IP Address.  
The default login information is available at the product label.

## FCC Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20cm between the radiator & your body.

## FCC Warning

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: 1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

**NOTE 1:** This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

**NOTE 2:** Any changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

The device is restricted to indoor use only when operating in the 5150 to 5250 MHz frequency range.
