# myStrom WSE2 Wifi Switch Installation Guide

**Contents**

**myStrom WSE2 Wifi Switch Installation**

## Installation

### myStrom app

- Download the myStrom app

- **Launch app**

  Open a free account or connect with your existing one.

- **Add WiFi**

  Switch Select «Add device» in the menu to add your new WiFi Switch.

- All Done

### Apple Home app

Launch the Apple Home app
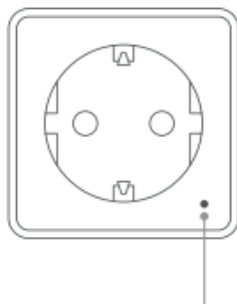

**Add WiFi Switch**

Select «+», then «Add accessory».

Scan HomeKit™ Code

**All Done**

## Ports, Buttons and LED

### LED indicator

| | |
|---|---|
| Off | WiFi Switch is plugged off |
| White | WiFi connection OK and connected to the myStrom service |
| White blinking | WiFi pairing mode (WPS) |
| Red | Start/Boot mode |
| Red blinking | Connection in progress |
| Red short blinking | Access Point mode |

### On/Off Button

Switches the connected device on and off manually

### WPS/Reset Button

| | |
|---|---|
| WPS | Connect the adapter to a WiFi network (DSL router or Access Point) – **press for 2 sec.** Condition – DSL router/Access Point supports WPS. |
| Reset | Resets the adapter to its factory settings. Any connection to the WiFi network will be lost – **press for 10 sec.** |

## FAQ & Support

**WiFi Switch not working?**

- **Restart the WiFi Switch**

  Simply unplug and plug it in again.

- **Plug the WiFi Switch close to your DSL Router**

  If the LED lights up in white, the WiFi Switch works perfectly and could have suffered from a weak WiFi signal in its previous location.

- **Reconnect the WiFi Switch**

  Activate WPS first on your Router, then on your WiFi Switch. Further help & contact form
