- **Prepare the ingredients:** Measure out your ingredients and pour them into a 90- to 100-mm-diameter metal cylinder.

- **Use the Right Containers:** To froth, you should always use a proper cylindrical container. Do not use containers that are too tall or too narrow.
- **Watch the Battery Life:** Pay attention to the power light and charge it when it's low so you don't run out of power while you're using it.
- **Do Not Store Near Heat Sources:** To protect the plastic parts, do not store the frother near heat sources.
