  - (Requires 2AAA batteries, not included)
  - Type-B to Type-A cable x1
  - User manual x 1

## Largest Sensor Ever

The NexiGo Iris Webcam is equipped with 1/1.8 inch Sony Starvis Sensor, the largest sensor currently available for webcams. It features vastly improved low-light performance, a wider dynamic range, and reduced diffraction for a better image quality.

## DSLR Quality with Webcam Convenience

Iris delivers crystal-clear and vibrant DSLR-like image quality. Say goodbye to grainy and washed-out video calls!

### Innovative Picture-in-Picture Mode

Picture-in-Picture mode lets you show off meetings like never before. It allows you to display a zoomed-in shot and a full-frame shot at the same time. This feature is great for product demos because you can have a zoomed-in shot showcasing the product while the full frame highlights your face.

### Professional AI-Tracking Conference Webcam

The NexiGo Iris AI Auto Tracking Camera makes powerful and reliable pro AV sounds weird here. Spelling out professional audio/video would be better. Drawing inspiration from the NexiGo Professional Camera family, the NexiGo Iris features AI functionality to track speakers and ensure that everyone at the meeting is both heard and seen.

### AI-Powered Auto-Framing Technology

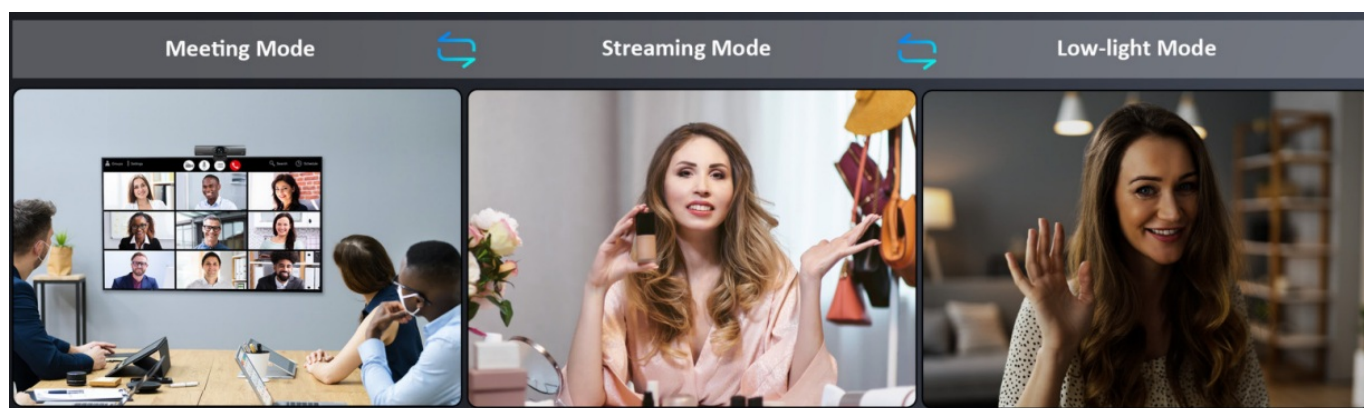

Automatically provides framing according to the number of people in the meetings.

### Onboard Flash Memory

Save three different image settings directly on the camera.

**Save All Settings  
Directly to the Iris**

**Uncompressed 4K Video**

Using the built-in HDMI output port.
