NiteDevil.com

Introduction

Key Features – IP-CAM828

The NiteDevil HERO IP Camera is a 4K camera that can capture color images in low light conditions. It also has a built-in warning strobe.

Connections and Dimensions

IP-CAM828

The camera can be powered in two ways:

1. 12V DC via the 2.1mm DC socket with a current consumption of 420mA. The camera is polarity sensitive, so connections must be made correctly.
2. PoE 48V RJ45 socket when connecting to a ZIP PoE NVR. Plug the camera directly into the NVR's built-in PoE switch. After approximately 1 minute of being connected, the camera should become visible.

The camera's dimensions are provided, excluding the bracket.

Mounting and SD Card Installation

To perform local recording on the camera, an SD card must be installed. The recording time will vary depending on the size of the SD card and encoding settings. The following are the maximum recording times for different SD card sizes:

- 32GB SD Card: 31 hours
- 64GB SD Card: 62 hours
- 128GB SD Card (MAX): 124 hours
- 256GB SD Card (MAX): 248 hours

The camera can be set to only record when triggered by motion detection, alarm input, or AI smart, maximizing the recording time achievable. Note that power must be removed from the camera when inserting or removing the SD card.

Mini-Eyeball

A template is provided in the box for marking the hole positions for fixing screws.

Setup Options

PoE ZIP NVR

When connecting to a ZIP PoE NVR, plug the camera directly into the NVR's built-in PoE switch. After approximately 1 minute of being connected, the camera should become visible. The 100m distance for a camera can be increased when the PoE Mode is set to EPoE. In the menu on a ZIP PoE NVR, go to Video > IP Channels > PoE Mode.

Product Usage Instructions

1. Choose one of the two methods to power the camera: either via a 12V DC connection or a PoE 48V RJ45 socket.
2. If performing local recording, install an SD card in the camera. Note that the recording time will depend on the size of the SD card and encoding settings.
3. For optimal recording time, set the camera to only record when triggered by motion detection, alarm input, or AI smart.
4. If connecting to a ZIP PoE NVR, plug the camera directly into the NVR's built-in PoE switch. In the menu on a ZIP PoE NVR, go to: Video > IP Channels > PoE Mode to increase the distance for a camera when the PoE Mode is set to EPoE.
5. When mounting the camera, use the provided template to mark the hole positions for fixing screws.
6. Remove power from the camera before inserting or removing the SD card.

Key Features – IP-CAM828

4K NiteDevil HERO IP Camera Color in Low Light with a Built-In Warning Strobe

- Full Colour 24/7
- Vehicle Detect
- 4K
- PoE & 12V
- Perimeter cross
- 2-way audio
- NiteDevil® tech
- Line Cross
- SD card slot
- White light LEDs

Connections and Dimensions

IP-CAM828

Powering the camera

Option 1 – Power the camera from 12V DC (via the 2.1mm DC Socket), the current consumption is 420mA. The camera is polarity sensitive so connections must be correctly made.

Option 2 – Power the camera using a PoE 48V RJ45 Socket

When connecting ZIP PoE NVR plug the camera directly into the NVR built-in PoE switch. The camera should automatically become visible after being connected for approximately 1 minute.

Dimensions

Mounting and SD Card Installation

For local recording on the camera itself, an SD card must be installed. Recording time will vary dependent on SD card size and encoding settings

- 32GB SD Card 31 hours
- 64GB SD Card 62 hours
- 128GB SD Card (MAX) 124 hours
- 256GB SD Card (MAX) 248 hours

The camera can be set to only record when triggered via motion detection, alarm input, or AI smart, this maximizes the recording time achievable. Remove power from the camera when inserting/removing the SD card.

Mini-Eyeball

A template is provided in the box for marking the hole positions for the fixing screws.

Setup Options

PoE ZIP NVR

When connecting to a ZIP PoE NVR plug the camera directly into the NVR's built-in PoE switch. The camera should automatically become visible after being connected for approximately 1 minute. The 100m distance for a camera can be increased when the PoE Mode is set to PoE. In the menu on a ZIP PoE NVR go to:- Video > IP Channels > PoE Mode

Non-PoE ZIP NVR

When connecting cameras to a Non-PoE NVR, they are first connected to an external network switch which is in turn connected to the NVR as shown below. See Extra Resources for more information on Adding IP Cameras manually to a ZIP Recorder

How to log in via Browser

The AI smart features can be configured in a ZIP recorder or directly in the browser the interface of the camera (standalone) Only one smart detection feature can be enabled at any given time. See the NVR or DVR manual for information on configuring these features with a ZIP recorder. Follow the steps below for configuring the settings directly in the camera via a browser for a standalone setup.

You will need...

- Windows Based PC/ Laptop connected to router/ PoE switch
- ZipVision Pro App on Mobile Devices

- PoE Switch connected to Network/ Router
- Ethernet network cable
- ZipFinder software is available via this link below:- www.softcctv.com/store/Item/Zip-Finder-IP-CCTV-Security-Camera-Discovery-Tool

NOTE If the PC being used is on a different IP range to the PC then add the IP range of the camera to the PC using the below guide:-

PDF Version:- http://www.cctvmanuals.com/pdf/tips/How_to_add_an_IP_Range.pdf

HTML Version:- http://www.cctvmanuals.com/tips/How_to_add_an_IP_Range/index.html

1. Plug the camera's RJ45 port with a network cable into a PoE switch
2. Using ZipFinder on a Windows Based PC/ Laptop Search and then tick the camera

3. Select Net Mode = DHCP, then click Modify

4. Search again, to get the updated IP address.
5. Select the IP address of the camera, Internet Explorer will pop-up, up and ask you to download and install the plug-in.
6. Download, install, and follow the steps for the plug-in installation, then re-load the browser by selecting the IP address again.
7. log in to the IP Camera, the default login details are:-

Default IP	192.168.10.1
DCHP	Off
User Name	admin
Password	777777

Browser Menu Settings

IP-CAM828

The menu be configured directly in the browser interface of the camera (standalone), in Remote Setting you will find the menu settings below:-

	Live	Name	Camera (user editable)
	Image Control	Date Format	DD/MM/YYYY / MM/DD/YYYY / YYYY/M M/DD

Customizing the Day / Night Setting to IR

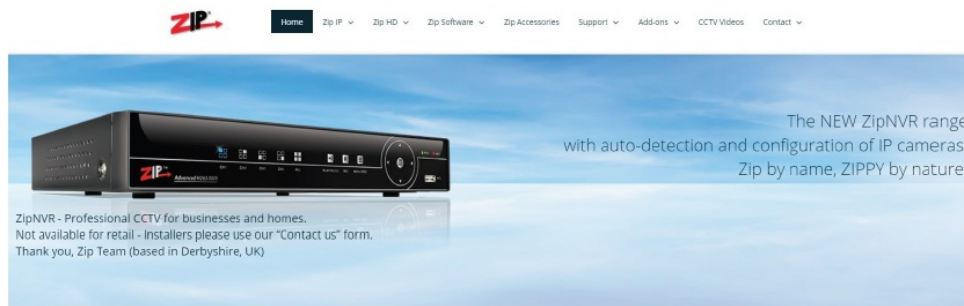

Once logged into the camera browser interface:- Go To Remote Settings > Video > Image Control > Image Settings e.g. Day / Night mode if want the camera to B&W & use the IR Suggested setting: IR Cut to Auto

ZIP Firmware

Firmware for the zip products is available online:- www.zipdvr.com/firmware.html Compare the firmware in the product against that available online.

General Maintenance

- Routinely clean the camera to prevent dust build-up as this can affect the performance of the camera. It is recommended to use a damp non-abrasive microfibre cloth.
- Routinely check the connections for power and data to ensure no water ingress and corrosion.
- Check that the cameras are firmly attached to the wall or mounting bracket.
- Check playback in the recorder to ensure the camera is recording and triggering properly.

Specifications

9.1 IP-CAM828

Resolution	4K (8MP) (3840 x 2160)
Lens Type	Wide Angle 3.6mm Fixed
Video Compression	H264 / H265
Bit Rate	512Kbps ~ 6Mbps
Shutter	1/5 ~ 1/20000s ~ Flickerless
Min. Illumination	Colour 24/7 with White Light LEDs
Day/Night Function	Auto or Scheduled
Microphone	Built-in
IR LEDs	1x High Power
IR Range	Up to 25m
White Light	2x High Power
White Light Range	Up to 20m
Gain Control	Auto
Video Connection	RJ45 Socket
Onvif	Yes
Protocol	TCP/IP, HTTP, DHCP, DNS, DDNS, RTP/RTSP
Other Protocols	SMTP, NTP, HTTPS
White Balance	Auto / Manual
Input Voltage	12V DC (420mA) / PoE 48V
Consumption	1.2 – 5W
Power Connection	12V – 2.1mm DC Socket / PoE – RJ45
IP Rating	IP66
Build	Metal & Plastic
Dimensions	100mm x (H) 90mm
